AMIMOTION WEBSITE

Site walkthrough

Every page of the new site, with a picture and one line on why it exists. 56 pages: the homepage, three product sites, solutions, industries, use cases, start-small pages, free tools, 14 field guides, and company pages.

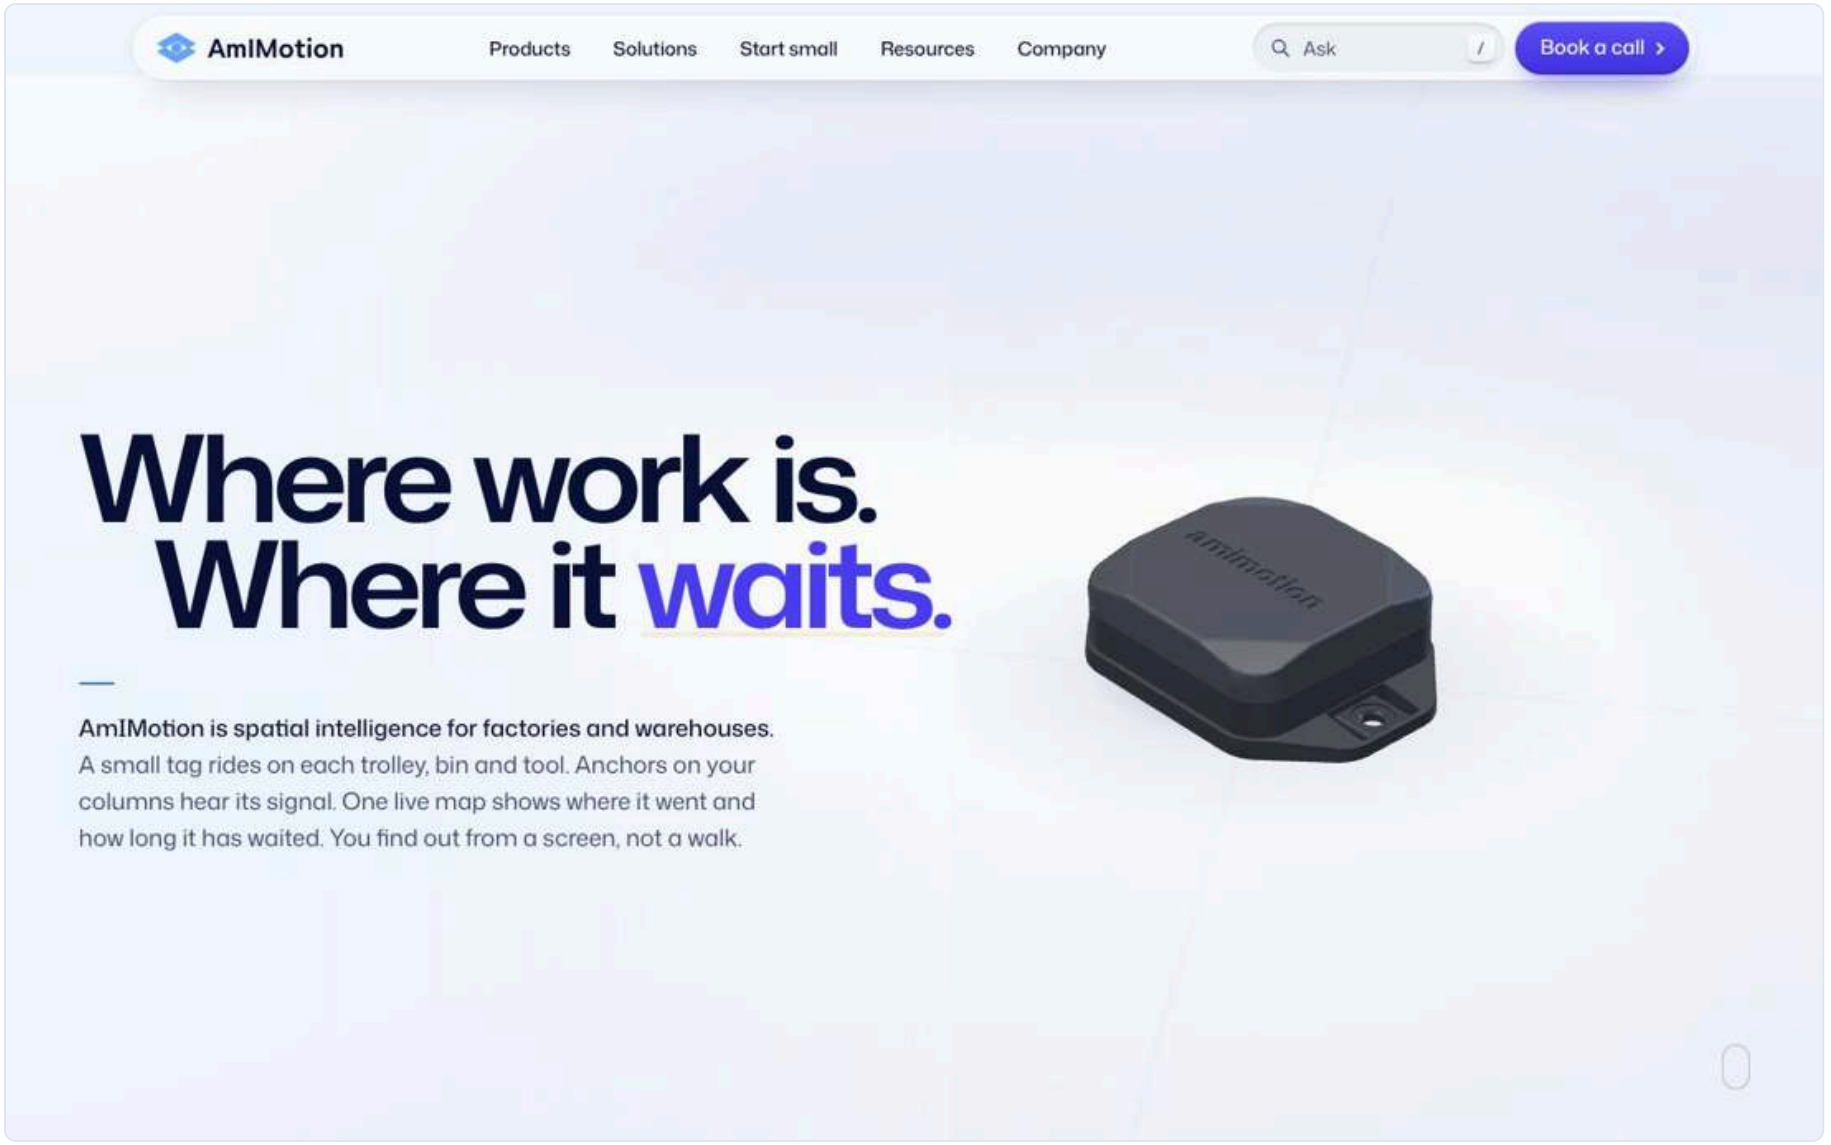

Status: the structure is ready. The hero copy and the explainer are still being polished. All words are locked; the polish work only touches design, speed, search and accessibility.

HOMEPAGE, IN SCROLL ORDER (01/16)

Hero

The first five seconds: the problem in one line (where work is, where it waits) and the real AmIGo tag, live in 3D from the founders' CAD.

HOMEPAGE, IN SCROLL ORDER (02/16)

Explainer: Search

The film starts with the pain everyone on a floor knows: walking around looking for a trolley.

HOMEPAGE, IN SCROLL ORDER (03/16)

Explainer: Tag

The answer, line by line: a small tag rides on each trolley, bin and tool. Words write in as the picture shows them.

HOMEPAGE, IN SCROLL ORDER (04/16)

Explainer: Anchors

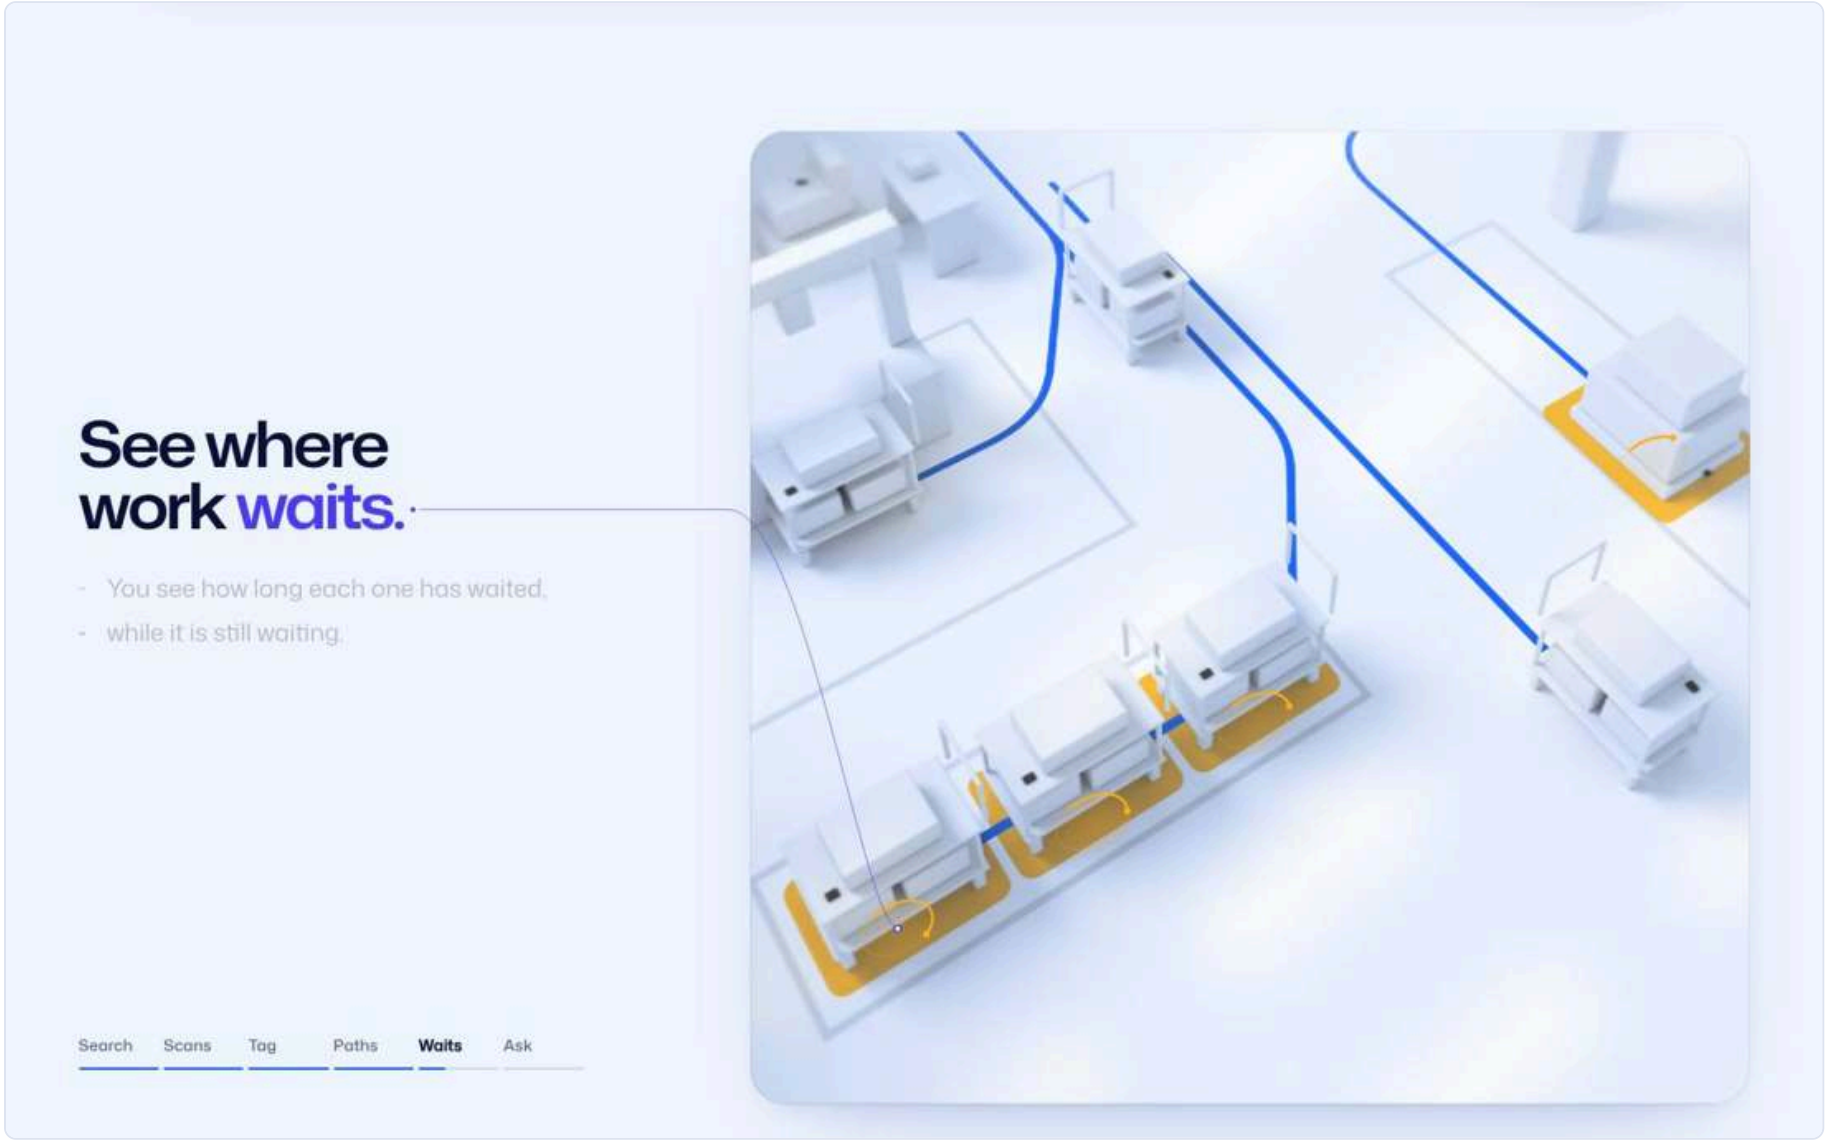

Anchors on the columns hear its signal. Light and a lens point at exactly what each line names.

HOMEPAGE, IN SCROLL ORDER (05/16)

Explainer: Waits

The value: see how long each one has waited, while it is still waiting.

HOMEPAGE, IN SCROLL ORDER (06/16)

Explainer: Ask

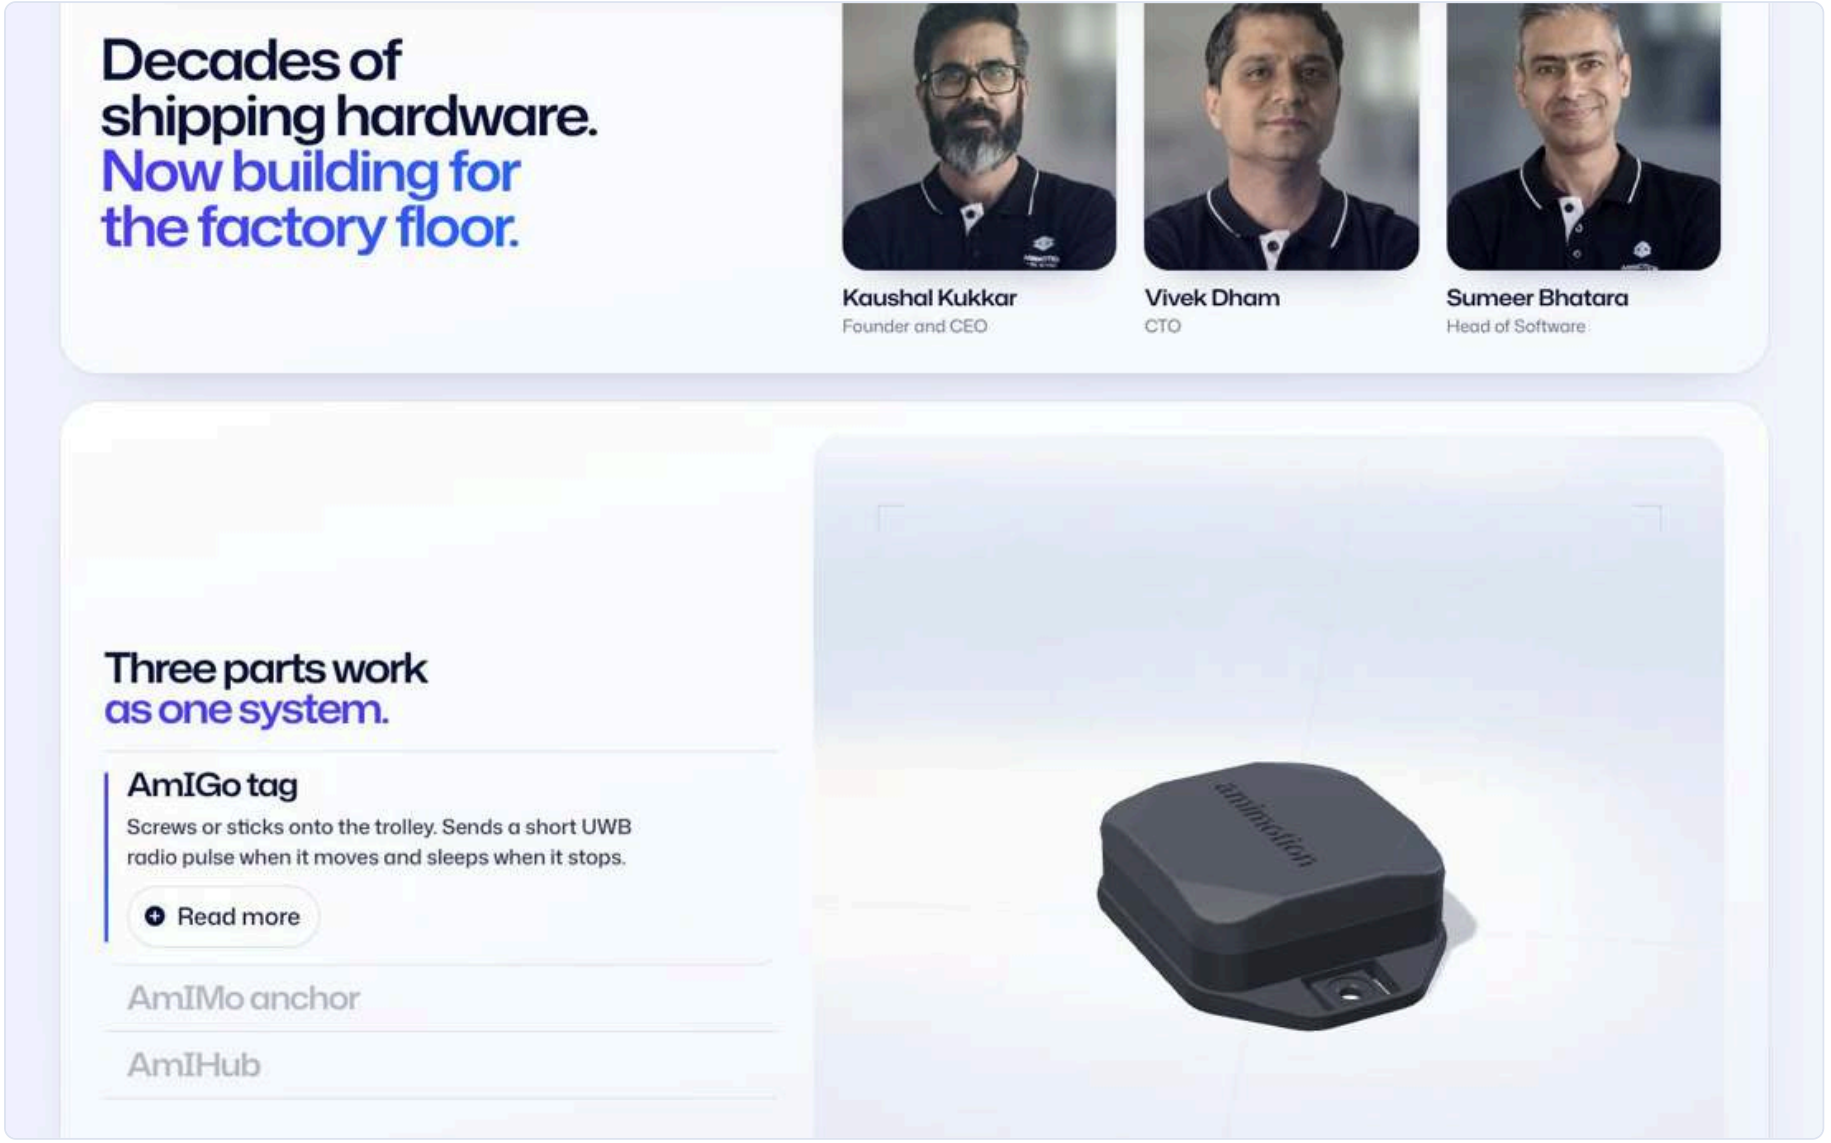

Ask your floor a question. Shows the AI and MCP layer without jargon.

HOMEPAGE, IN SCROLL ORDER (07/16)

Team, then the products

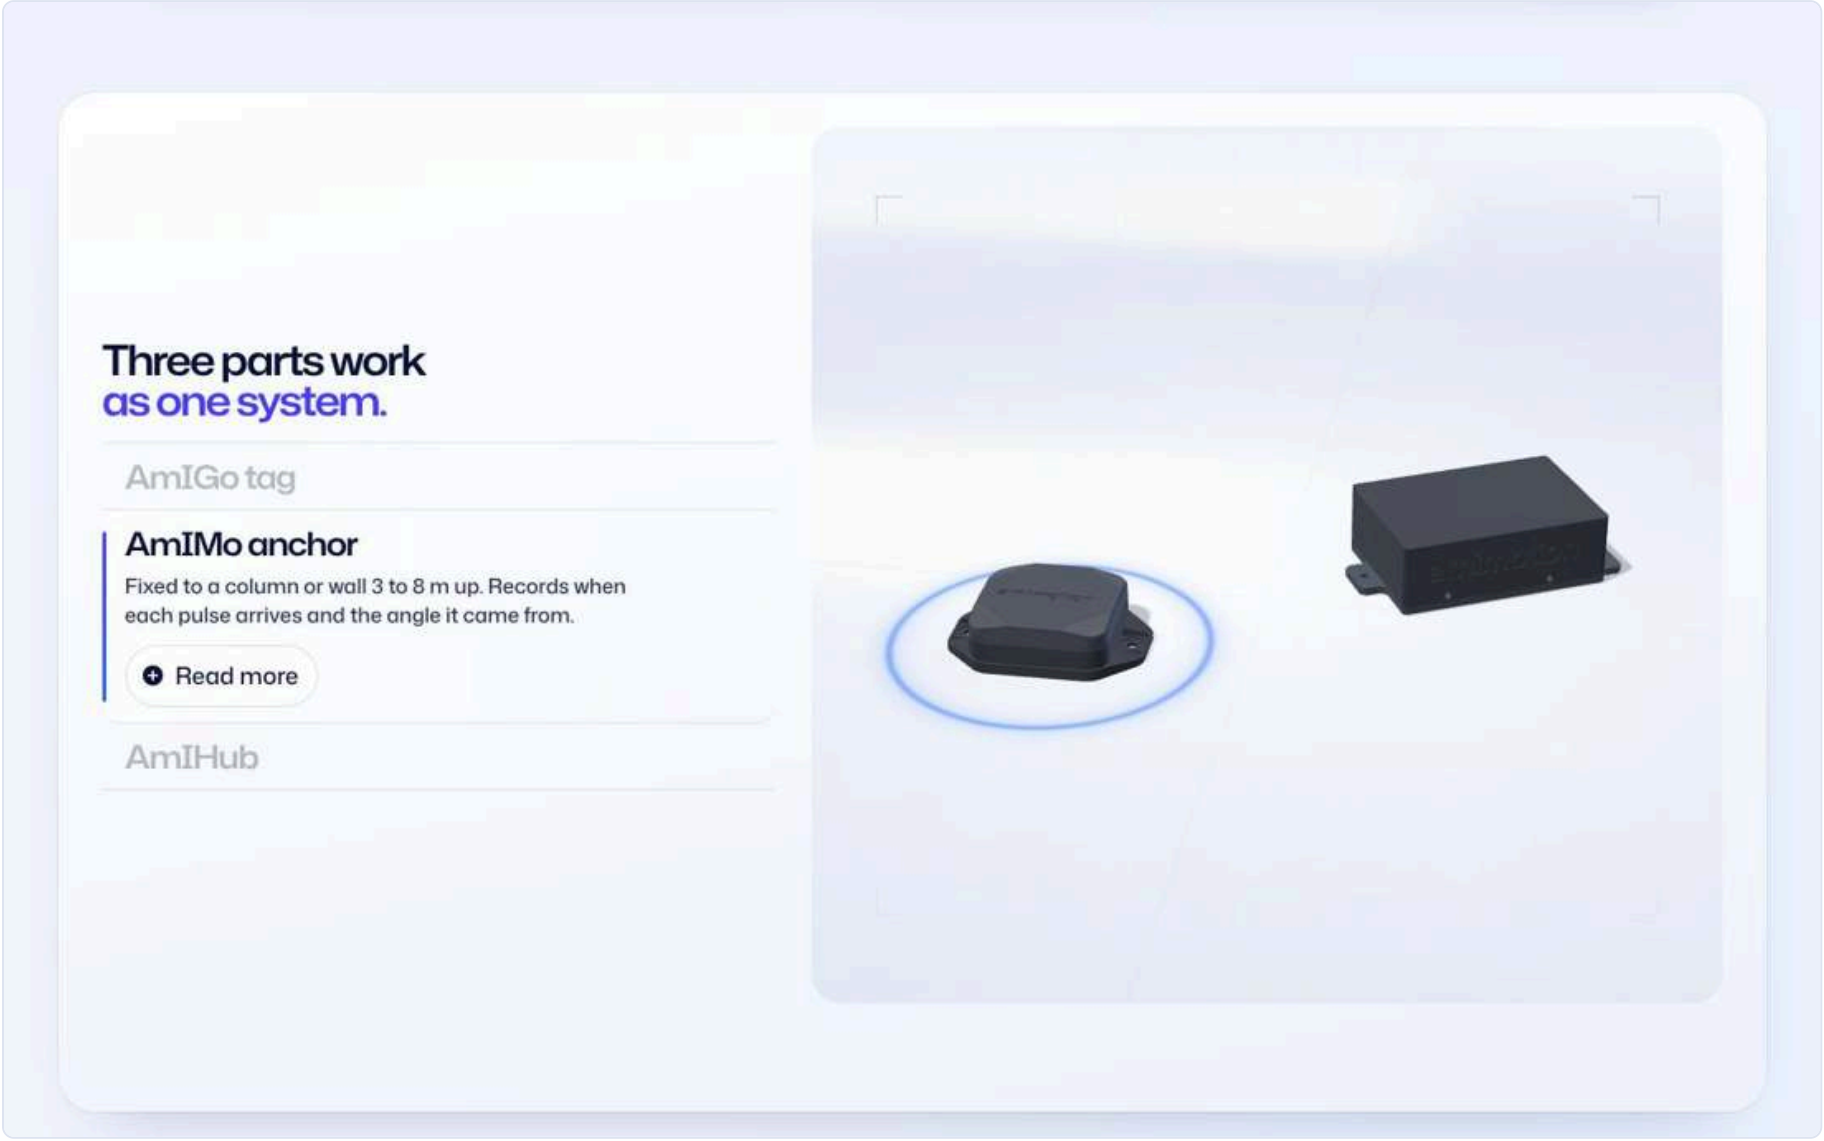

Credibility right after the story: the three founders, then the three parts that work as one system.

HOMEPAGE, IN SCROLL ORDER (08/16)

AmIMo anchor

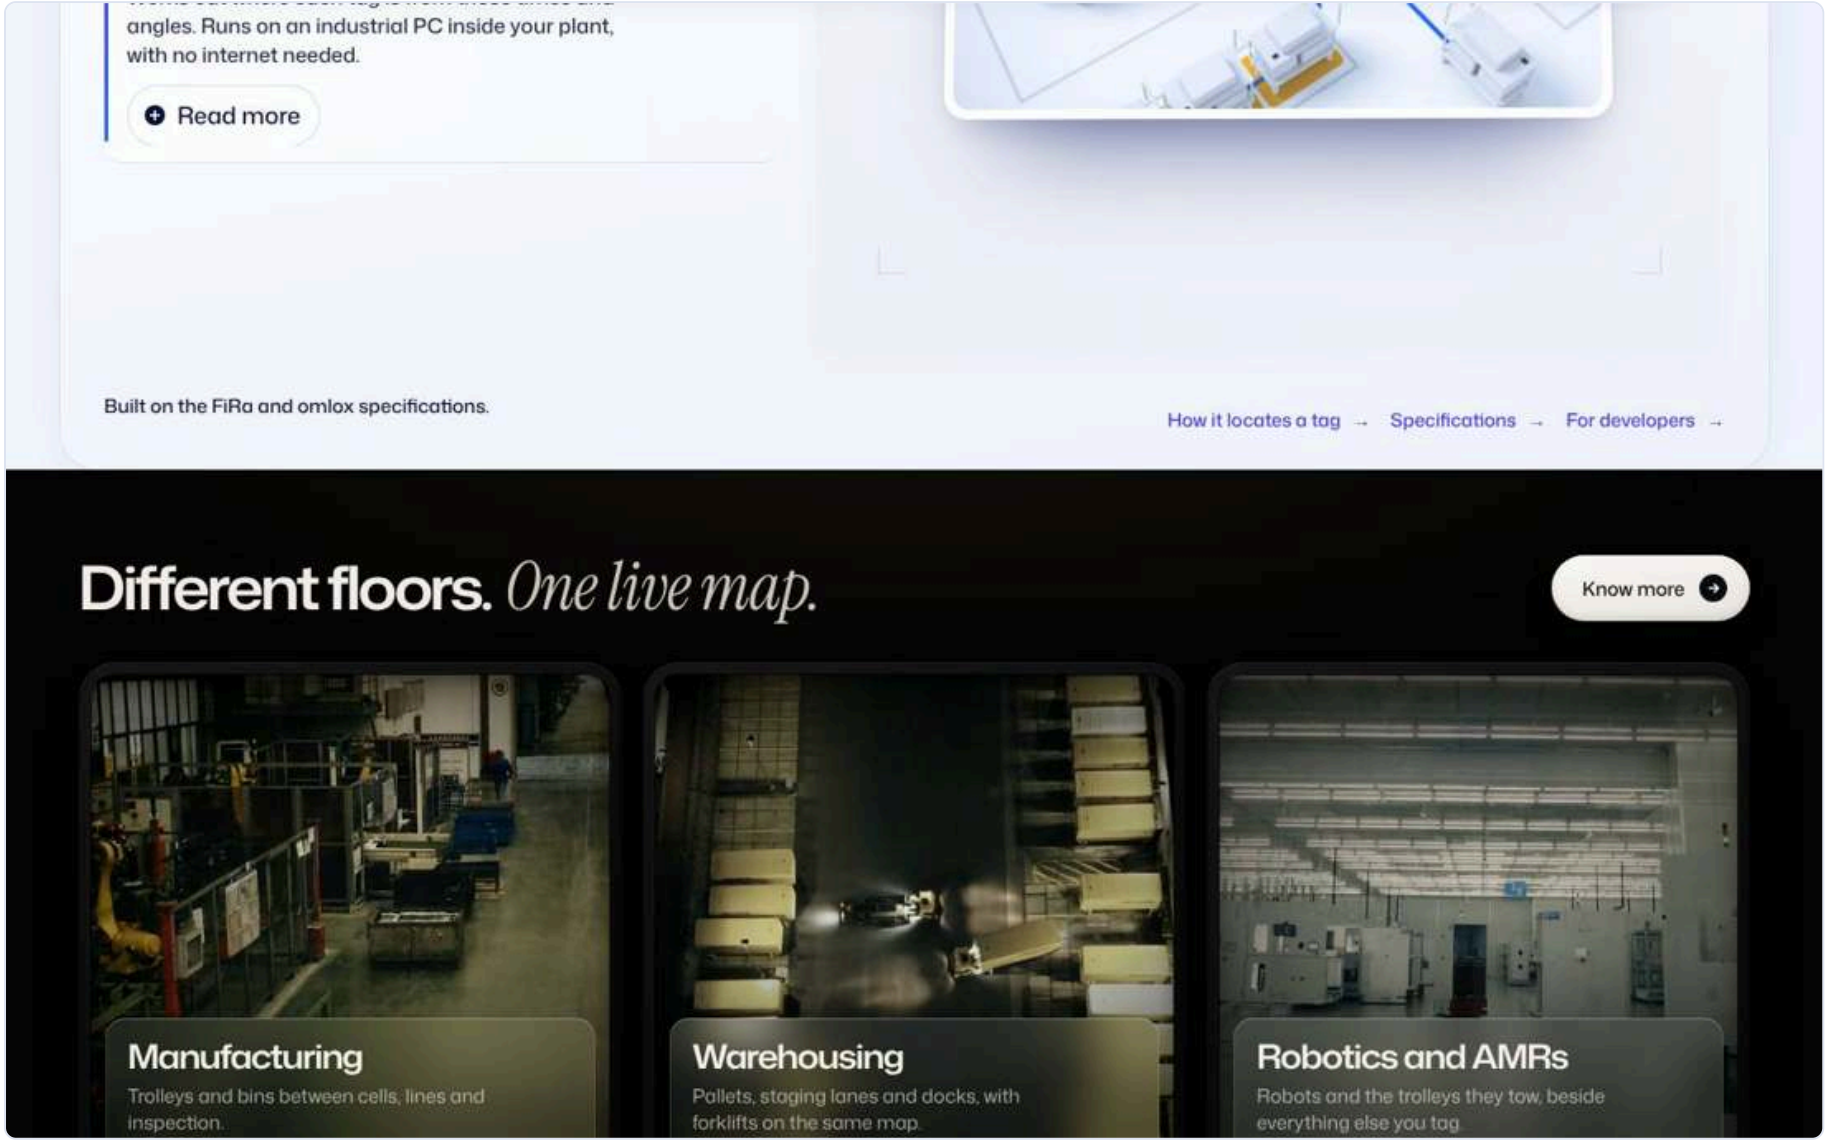

Products come one by one, from CAD; the tag's pulse travels to the anchor.

HOMEPAGE, IN SCROLL ORDER (09/16)

Industries

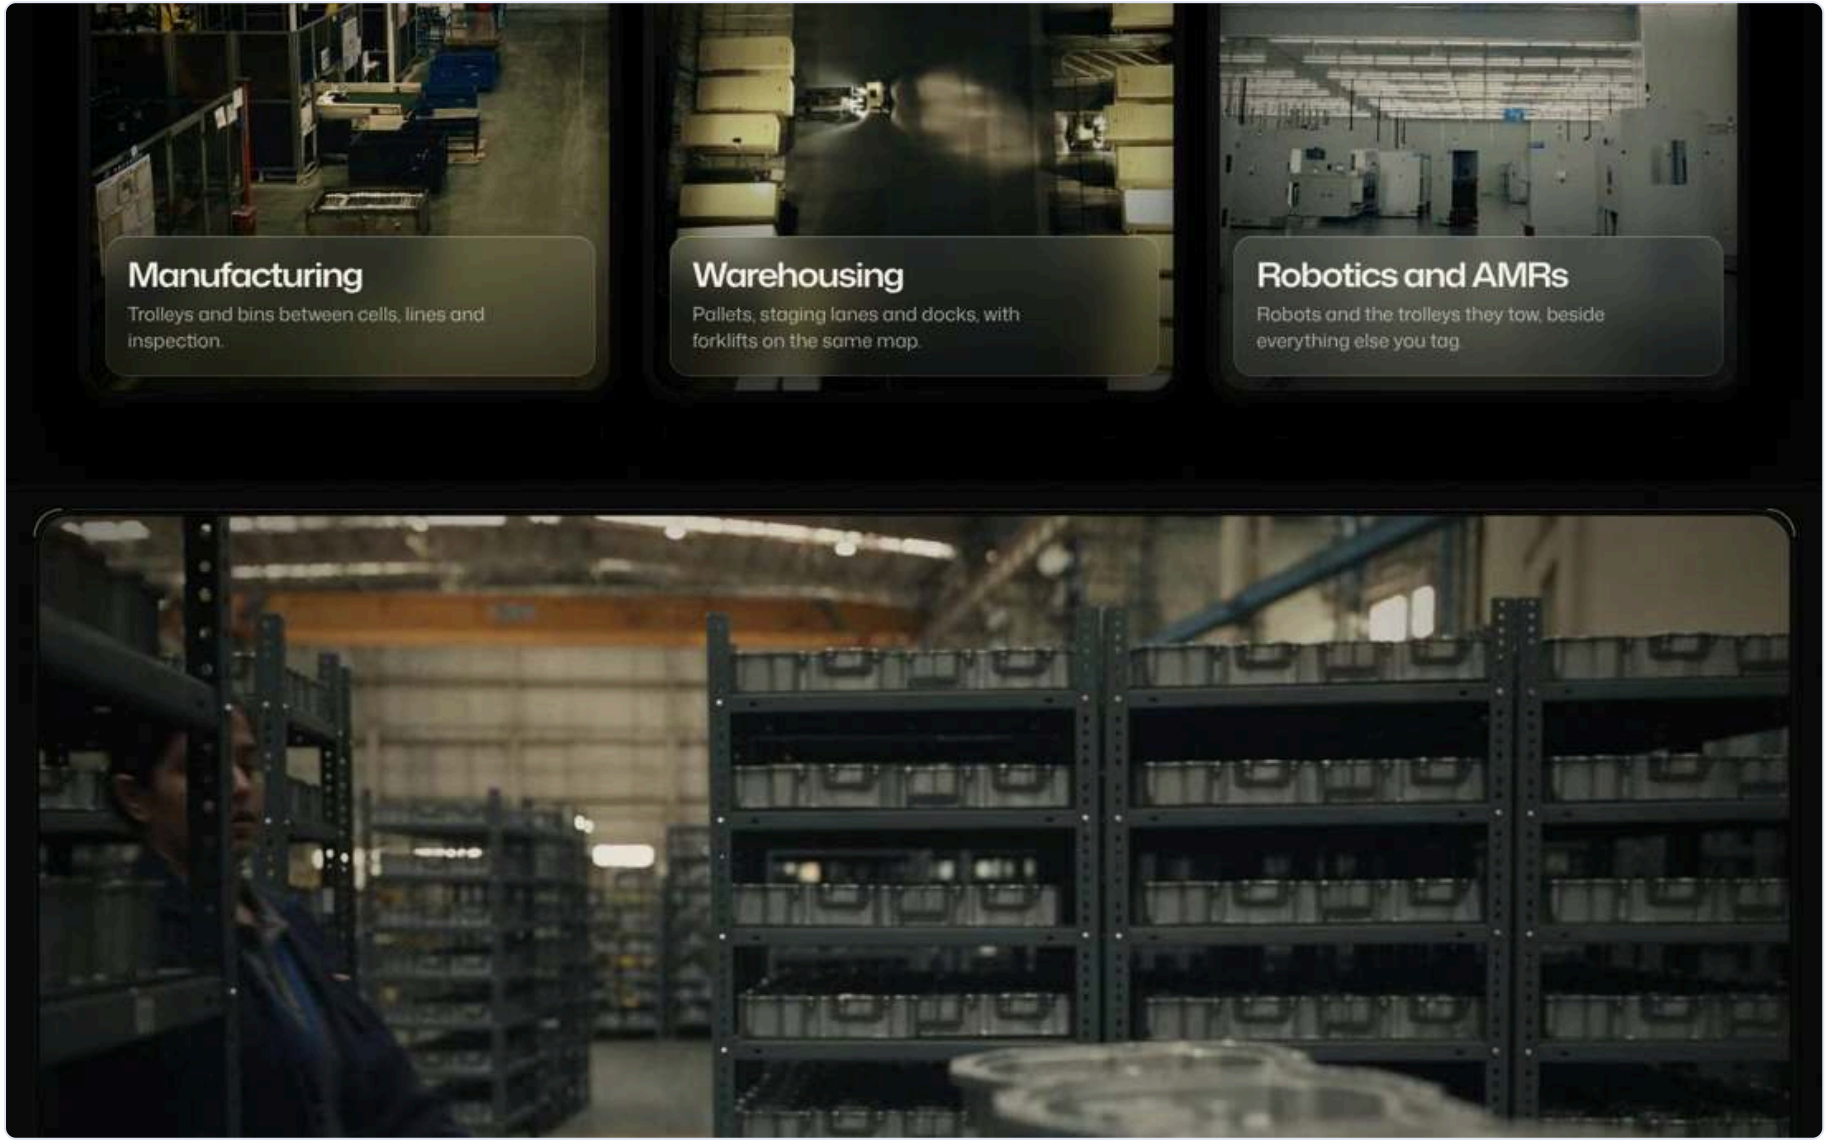

Different floors, one live map: each buyer picks their own floor.

HOMEPAGE, IN SCROLL ORDER (10/16)

Field guides open

The guides start with a full-frame film, then settle into cards.

HOMEPAGE, IN SCROLL ORDER (11/16)

Field guide film

A short film of a plant floor sets the scene for the guides.

HOMEPAGE, IN SCROLL ORDER (12/16)

Field guide film

The same film continues as you scroll.

HOMEPAGE, IN SCROLL ORDER (13/16)

Field guides

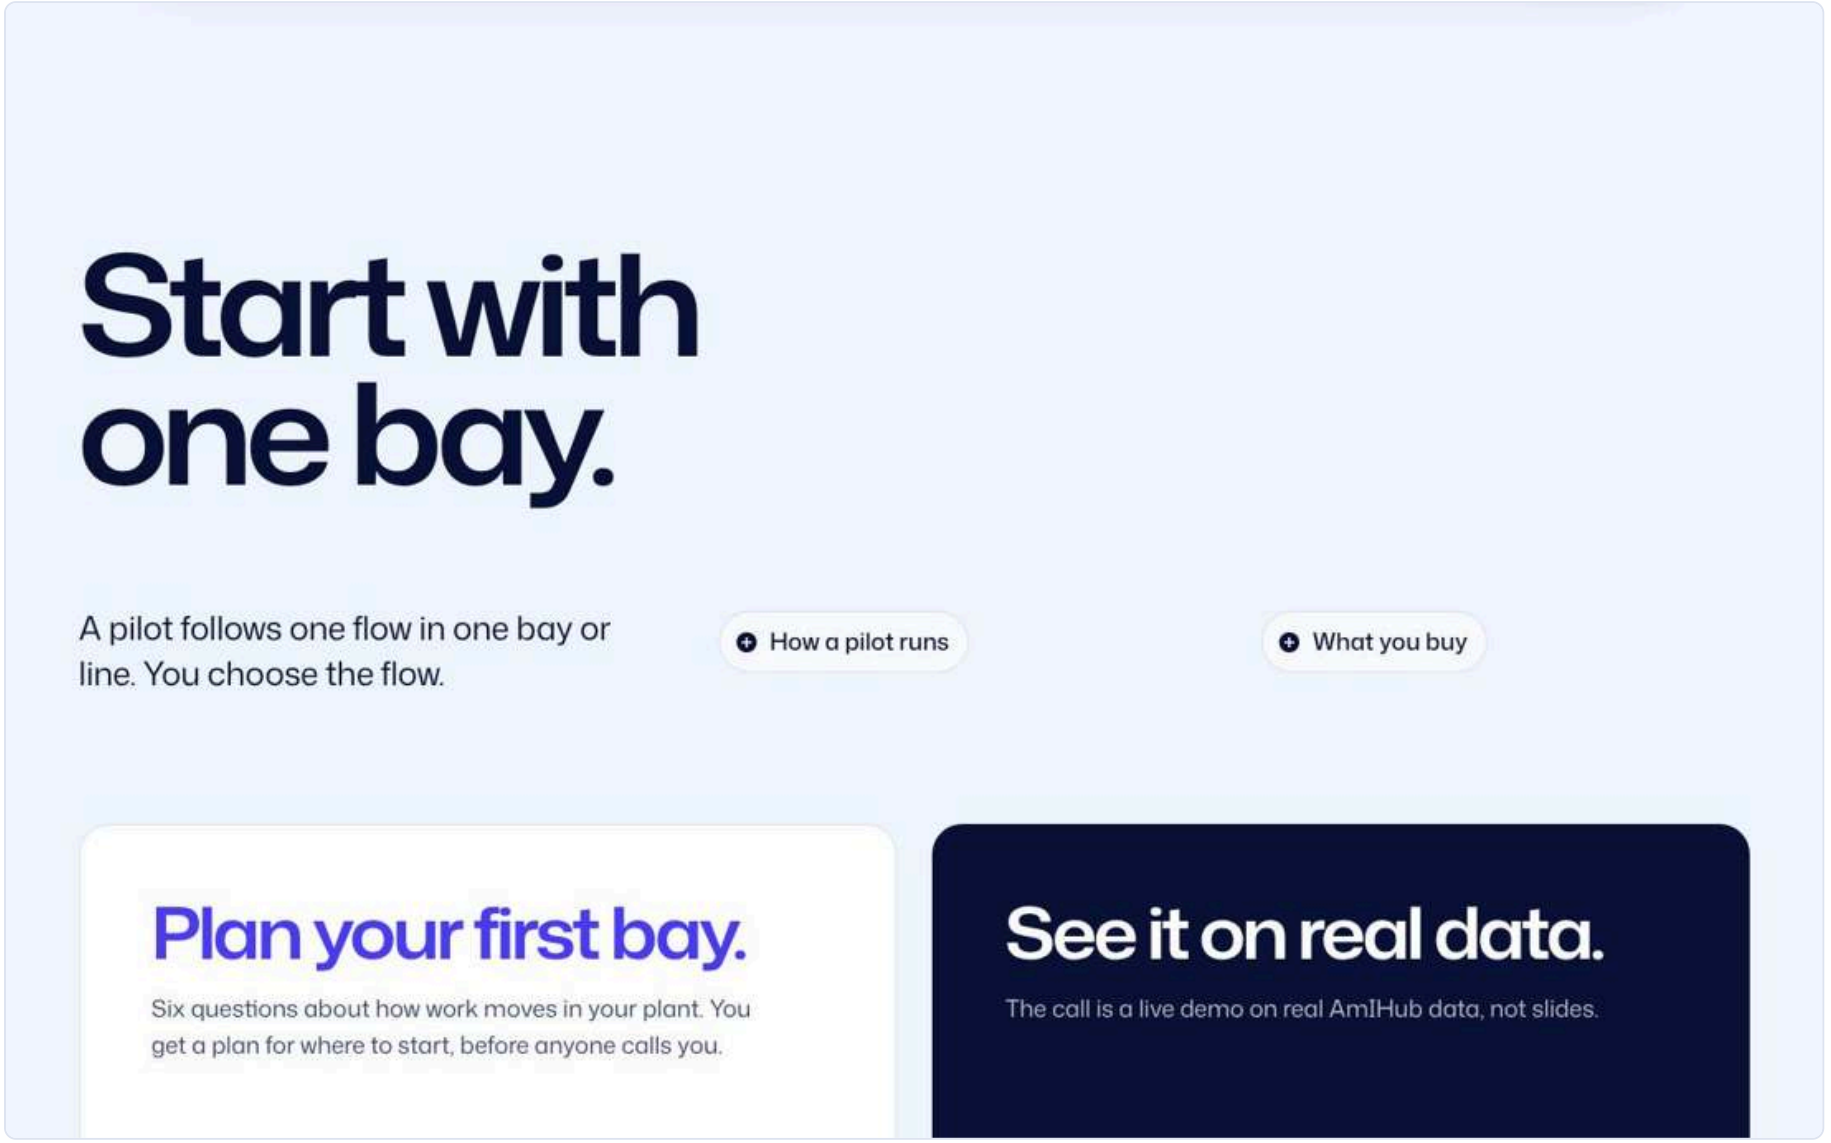

Each card opens one guide: proof that we know the floor, and the site's search engine.

HOMEPAGE, IN SCROLL ORDER (14/16)

Start with one bay

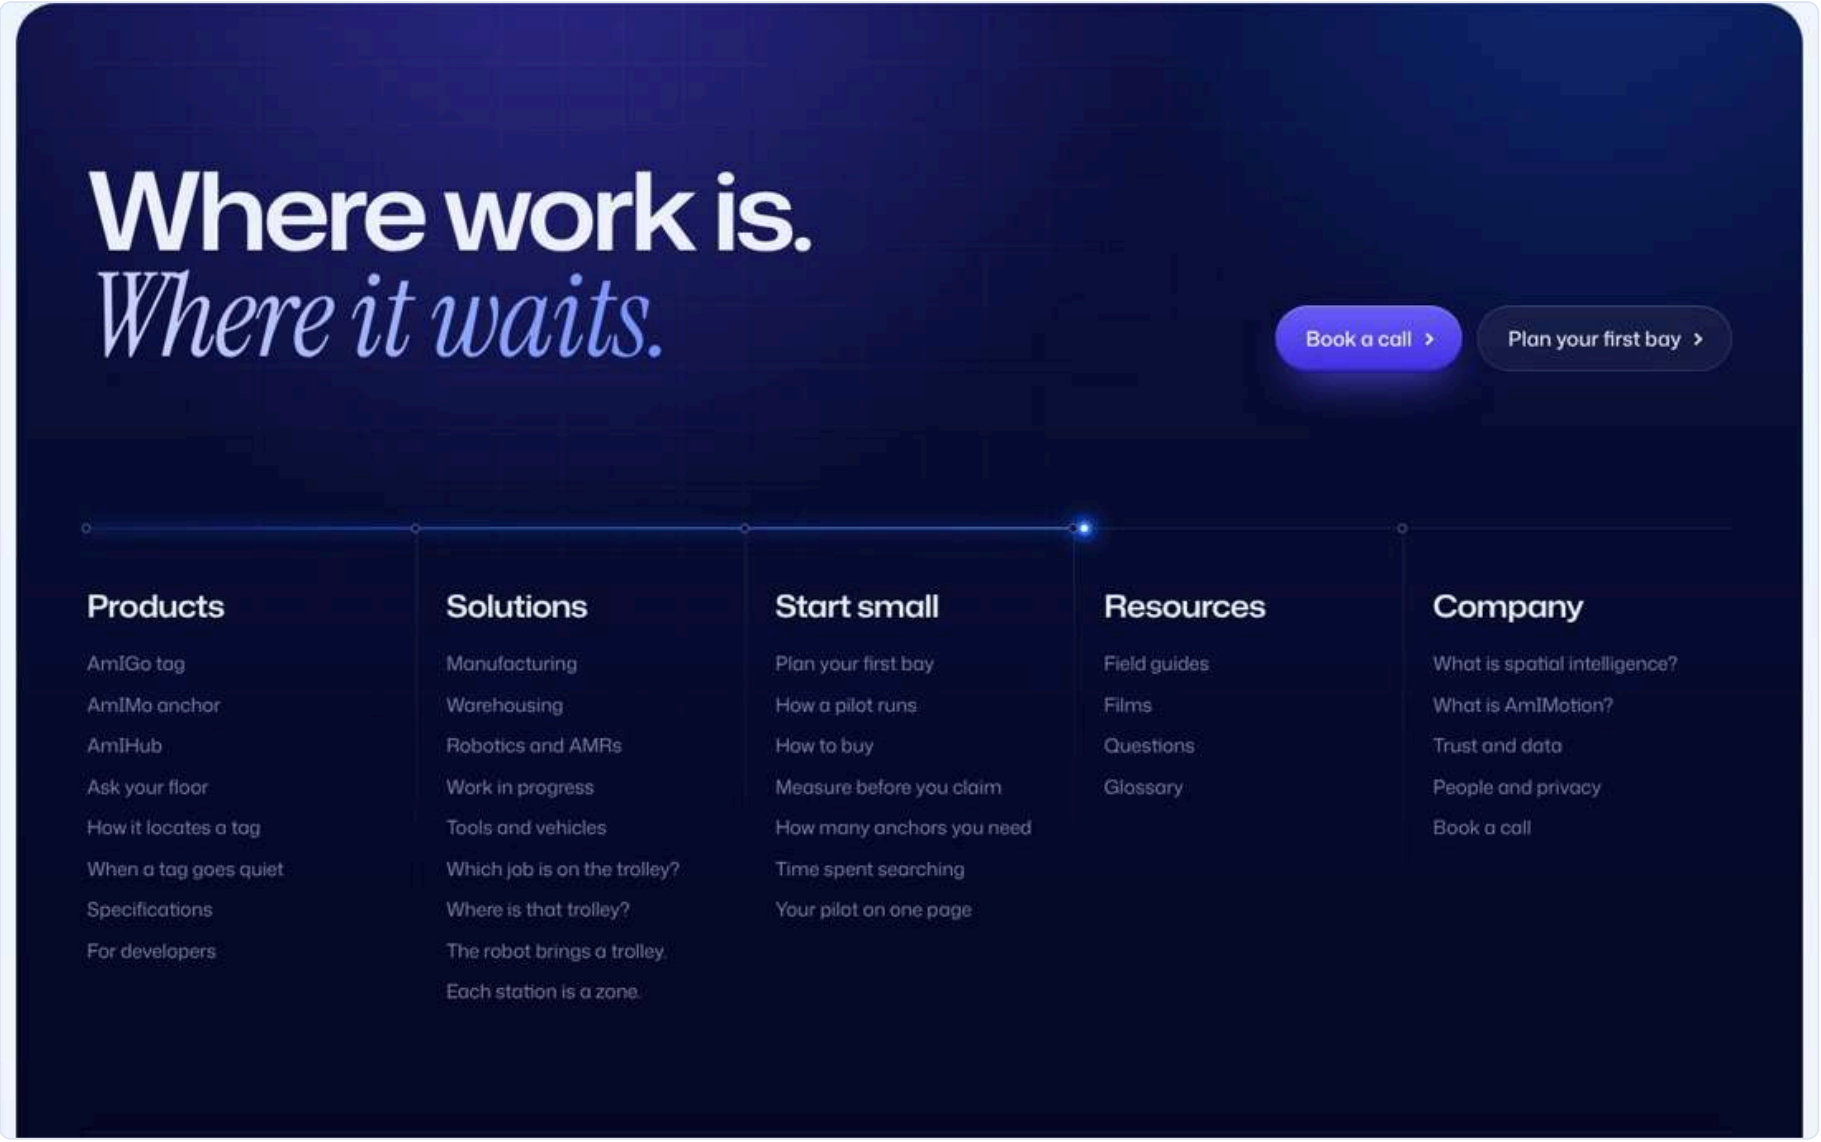

The single call to action: plan your first bay, or see it on real data.

HOMEPAGE, IN SCROLL ORDER (15/16)

Footer

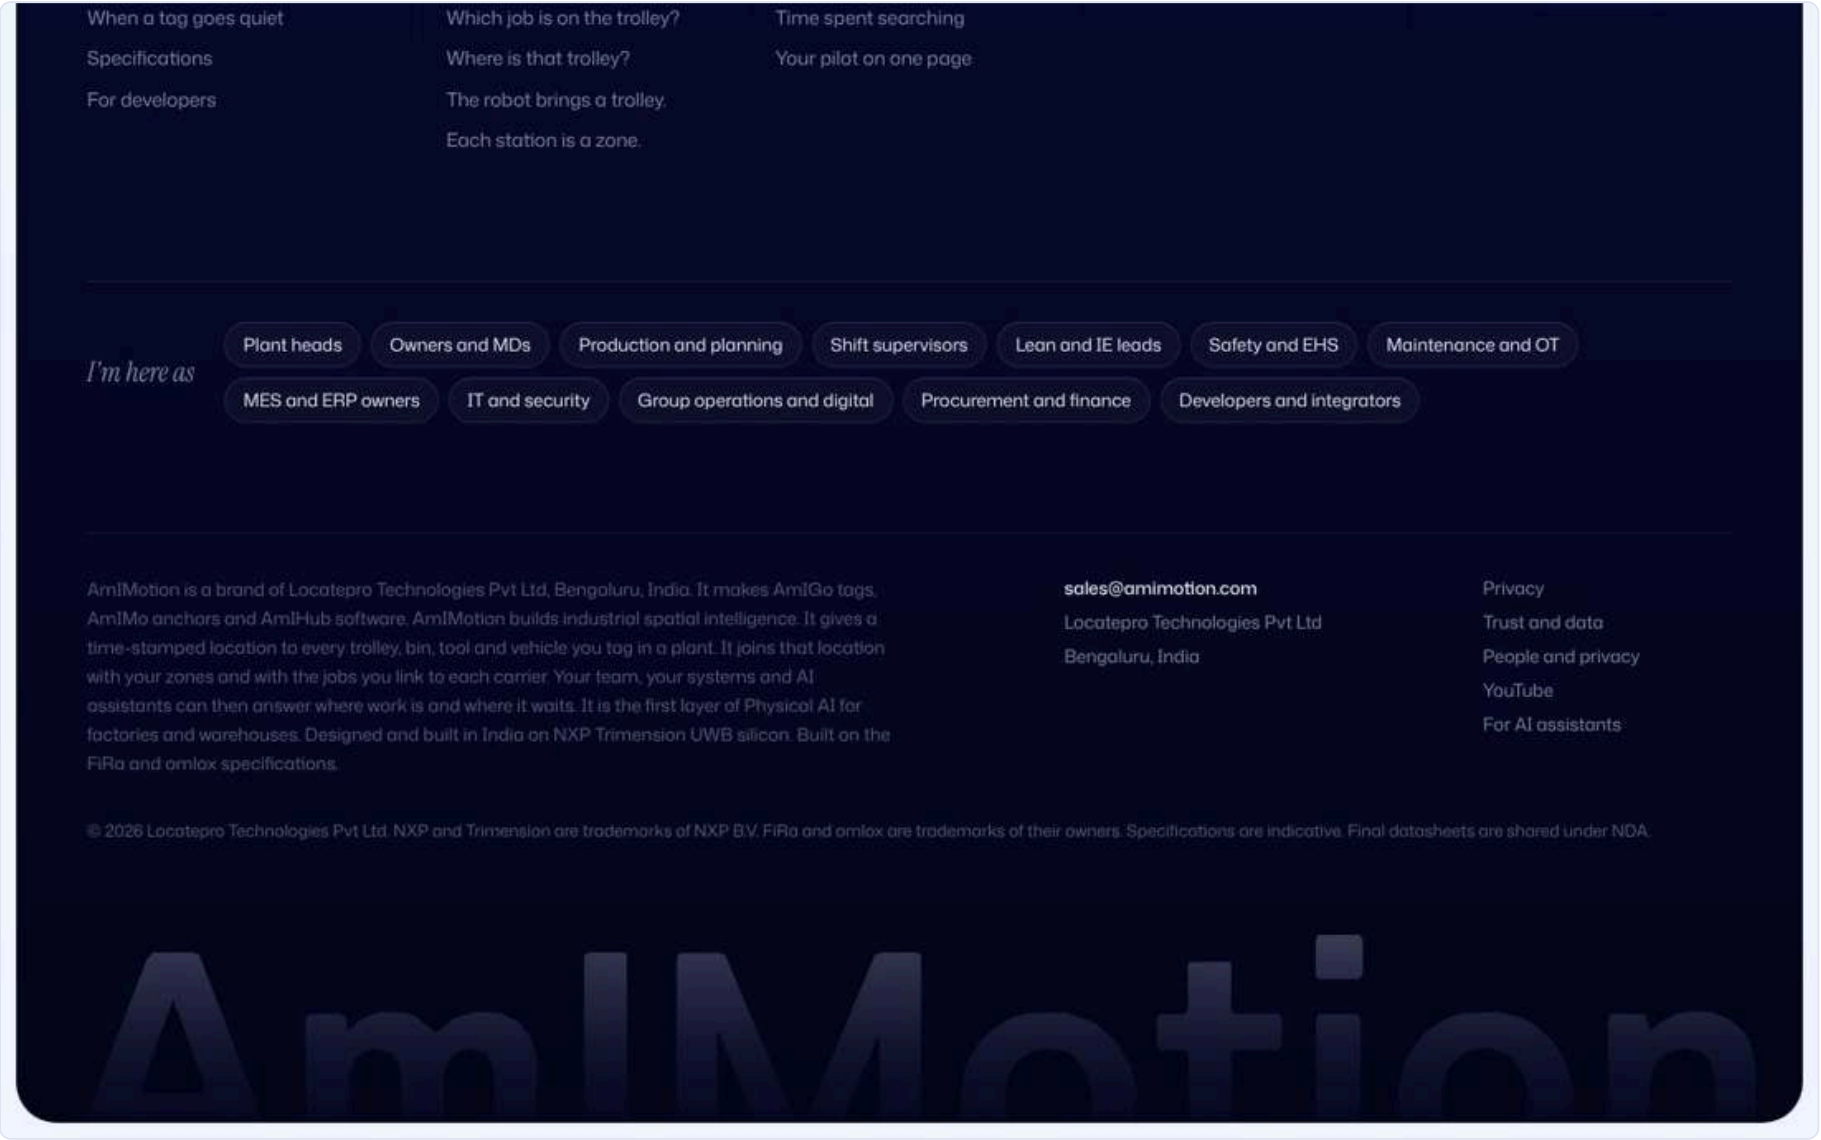

The whole site as a map, the company line, and Book a call once more.

HOMEPAGE, IN SCROLL ORDER (16/16)

Footer end

Company details, legal and the wordmark.

HOMEPAGE ON A PHONE

Same story, phone layout

Every section is built for a 390 px screen first.

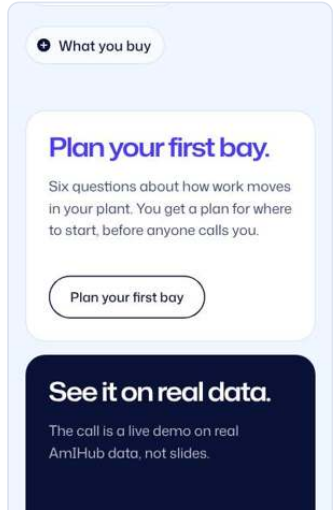

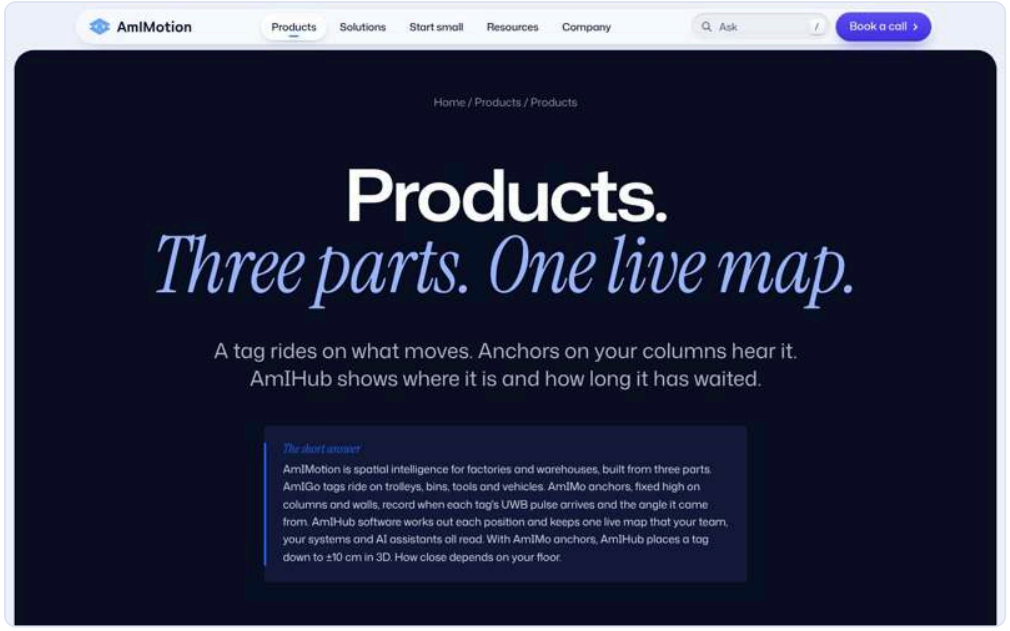

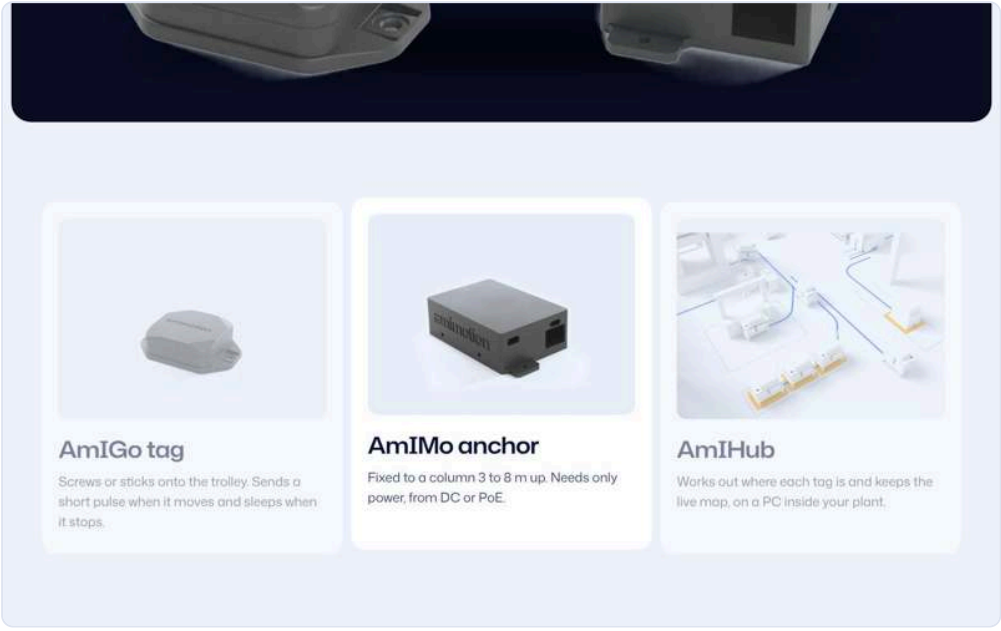

PRODUCTS

/products/

One page for the three parts that work as one system, so a buyer sees the whole kit at once.

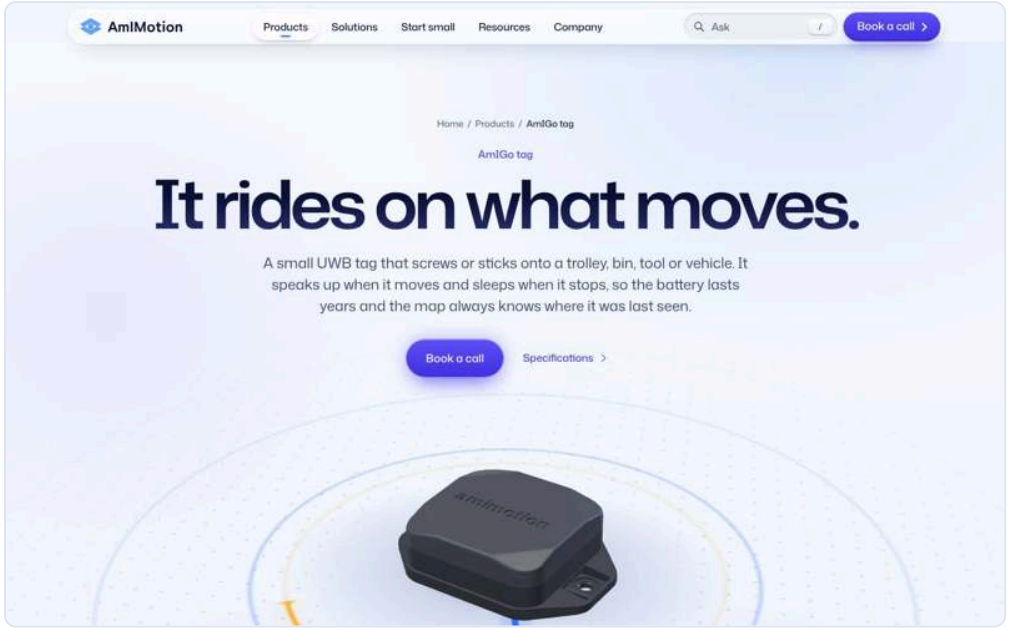

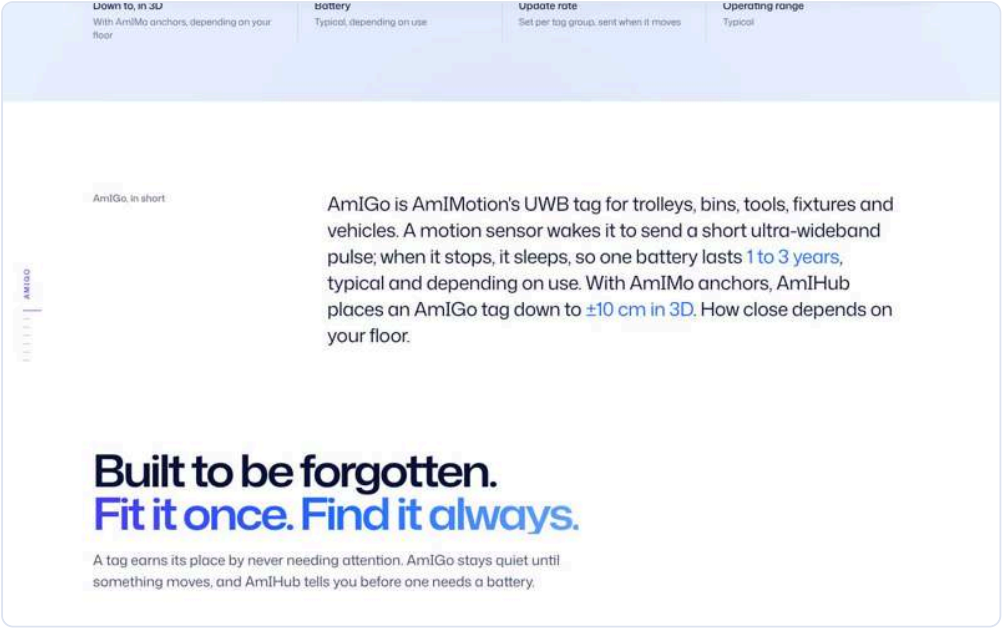

PRODUCTS

/products/amigo/

AmIGo tag. What it is, where it goes (trolleys, bins, tools, vehicles), built from the real CAD.

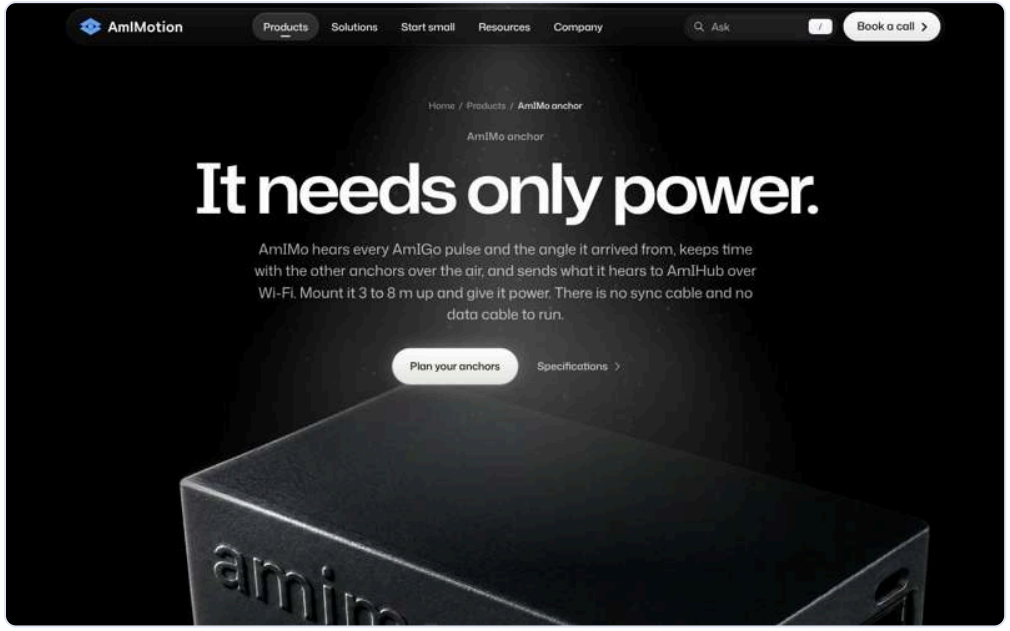

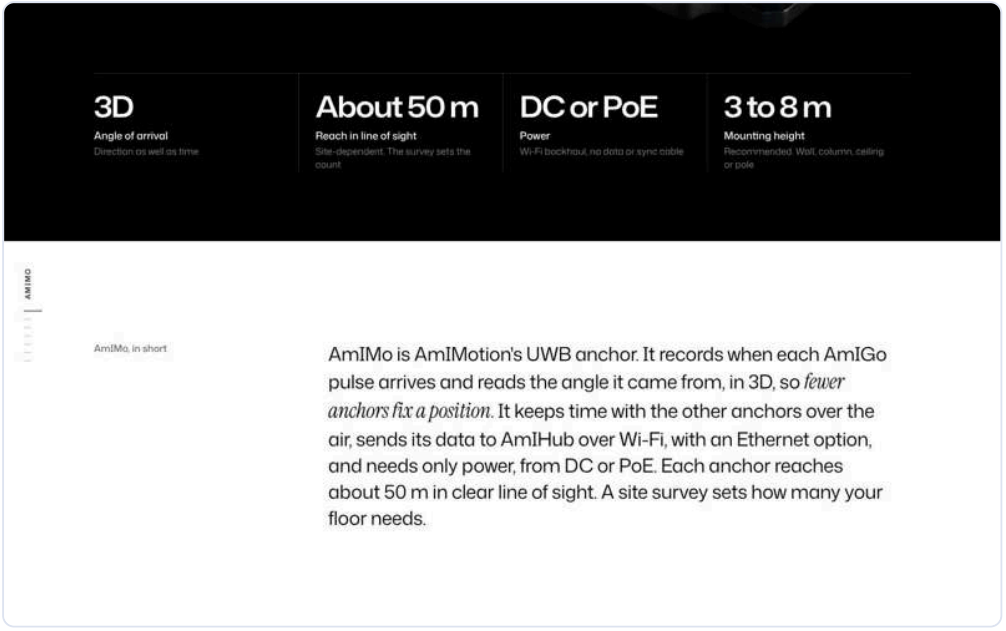

PRODUCTS

/products/amimo/

AmIMo anchor. Power only, no sync cable, 3D angle: the install story a plant engineer cares about.

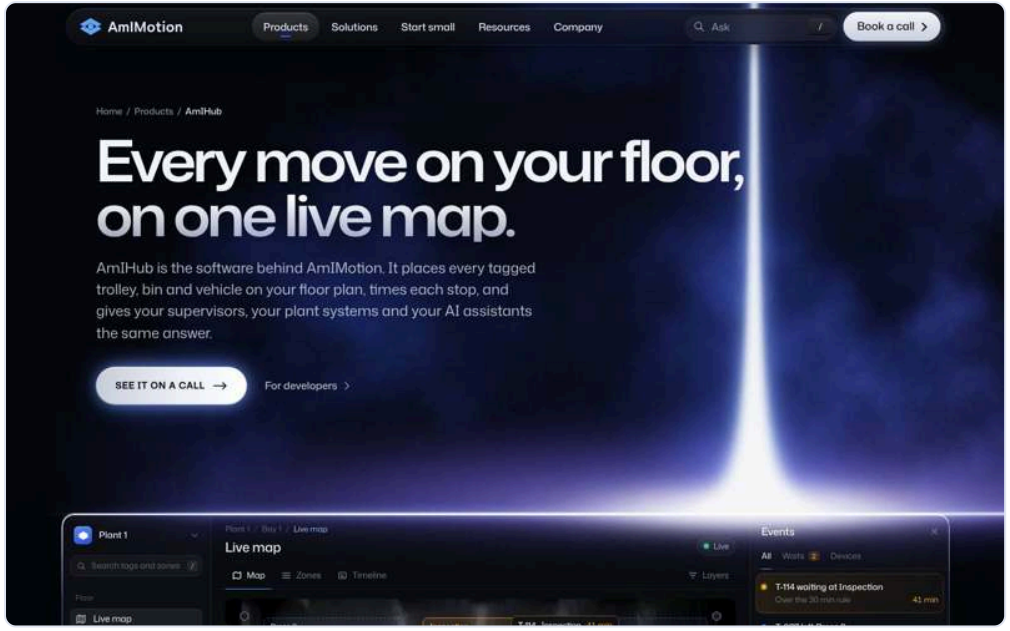

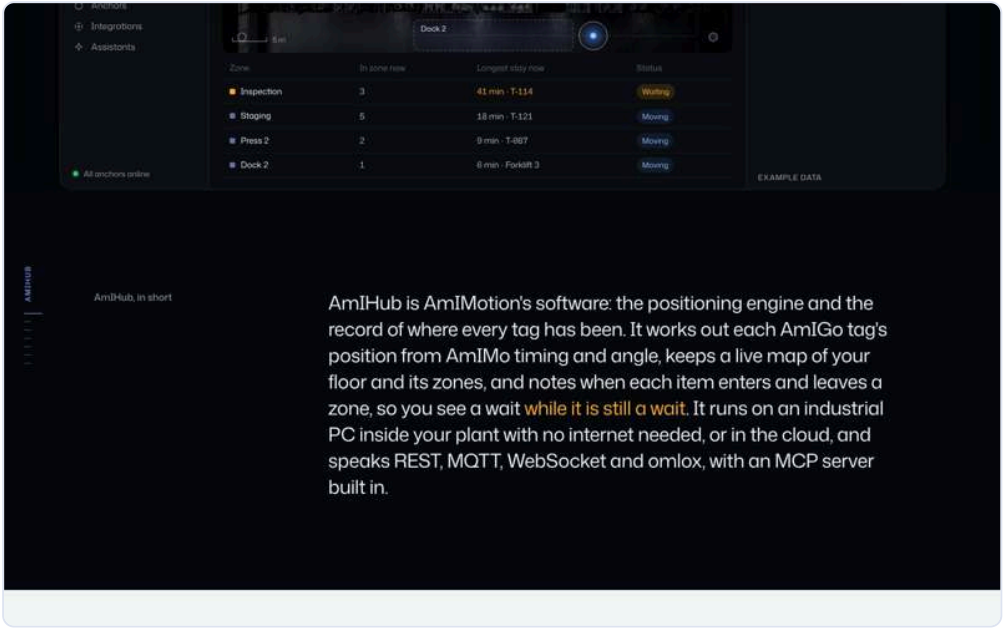

PRODUCTS

/products/amihub/

AmIHub software. The centrepiece: live map, zone events, open APIs and the MCP server.

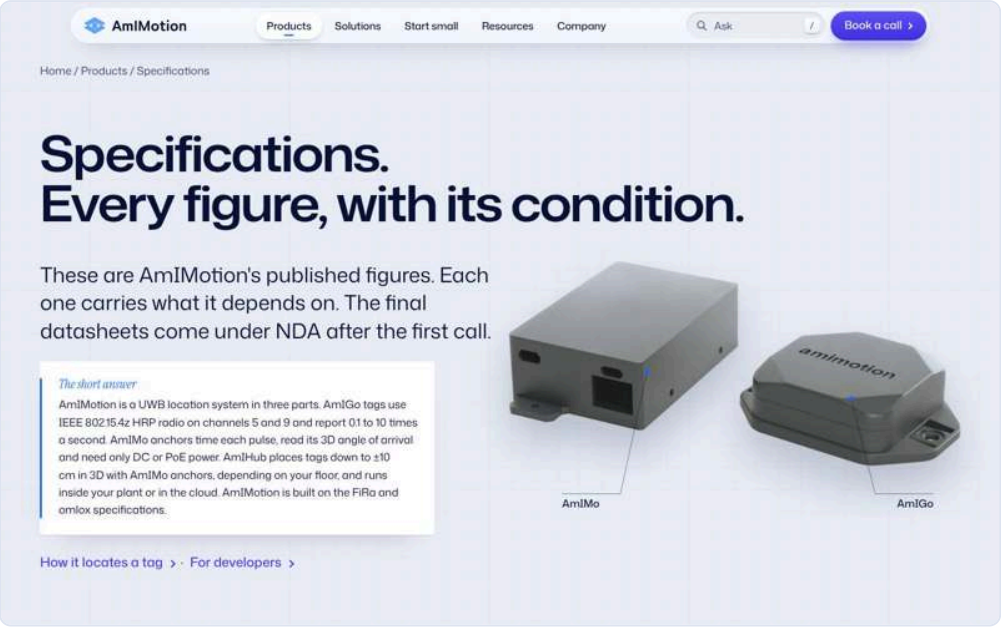

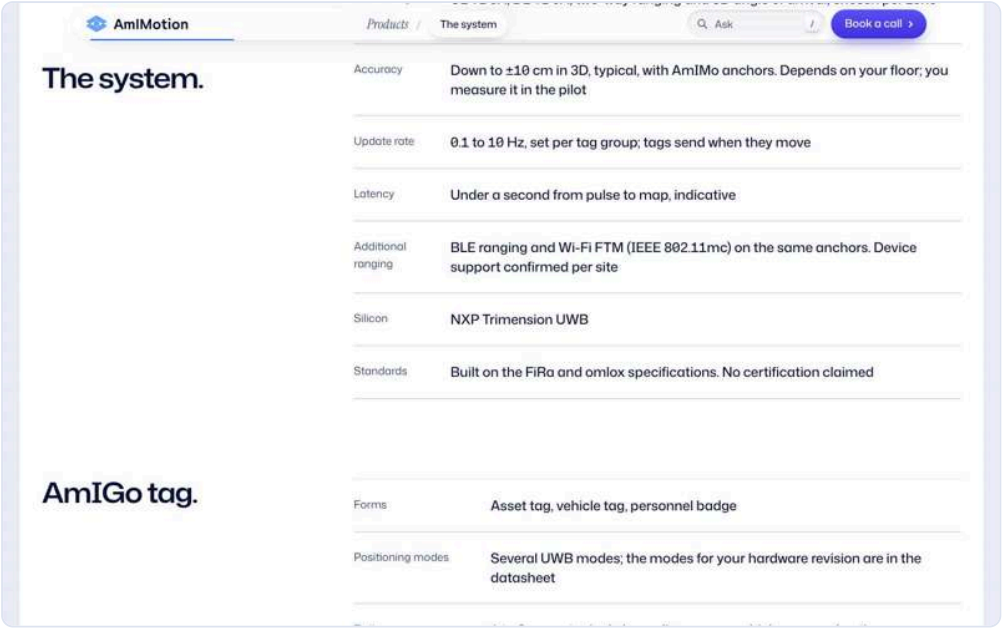

PRODUCTS

/specs/

All specifications in one table, for the engineer who wants numbers before a call.

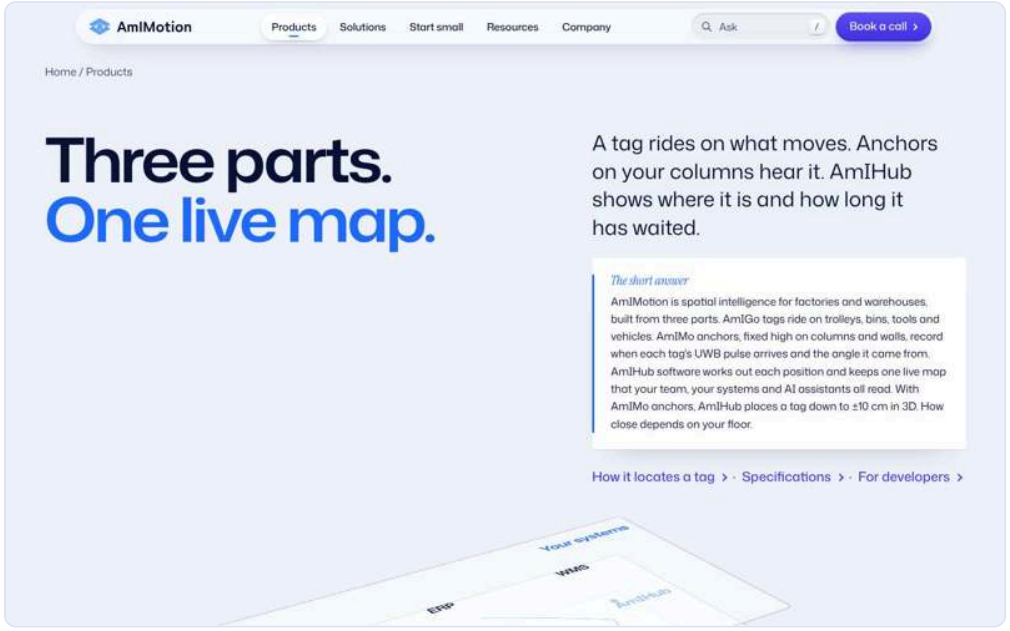

PRODUCTS

/platform/

How tags, anchors and software fit together, in one picture.

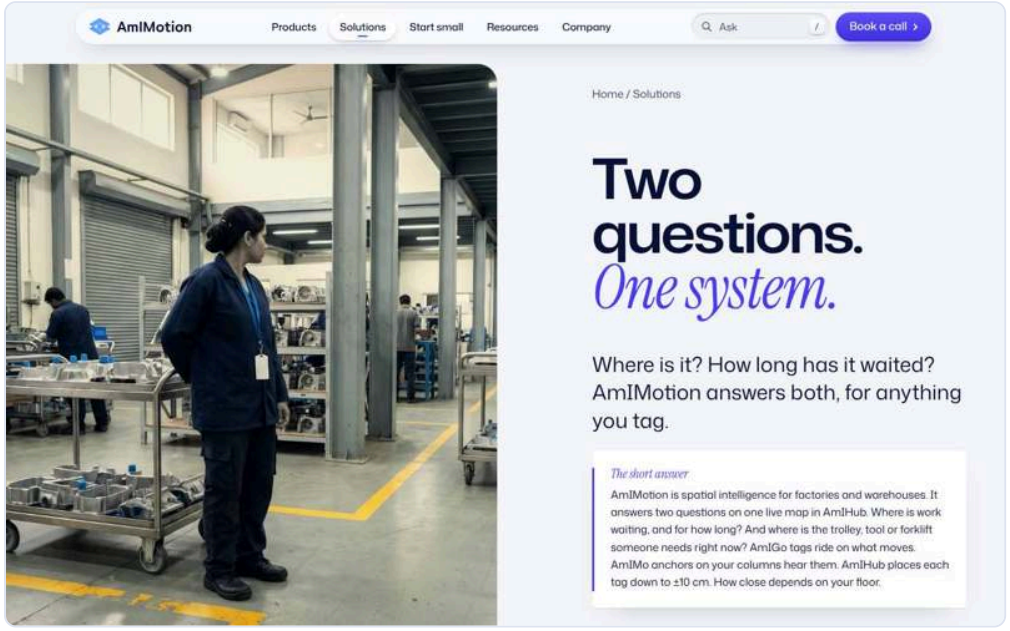

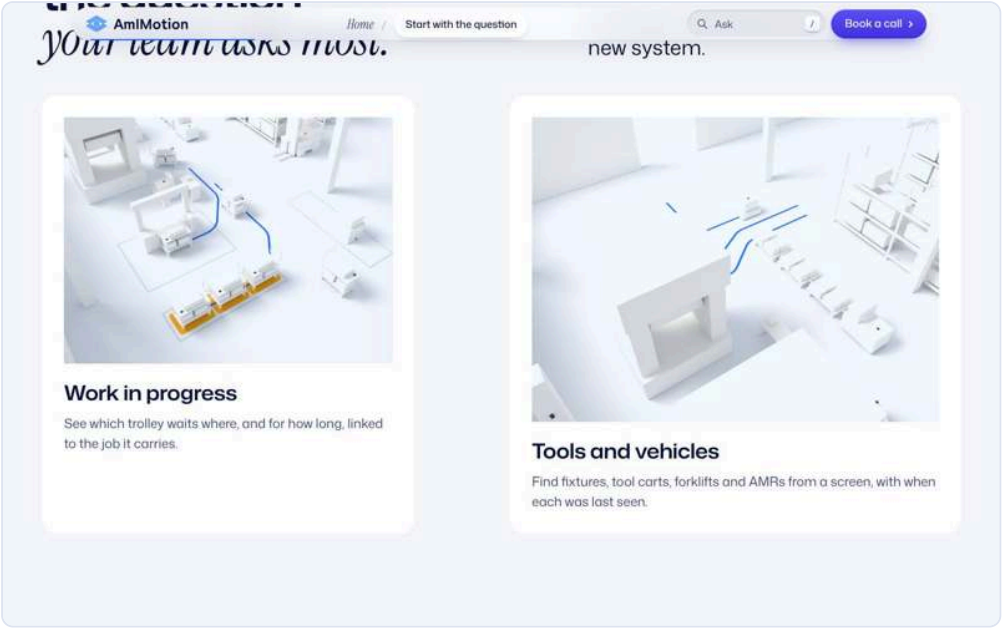

WHERE IT HELPS

/solutions/

The jobs we solve, named in the buyer's words: WIP, tools and vehicles.

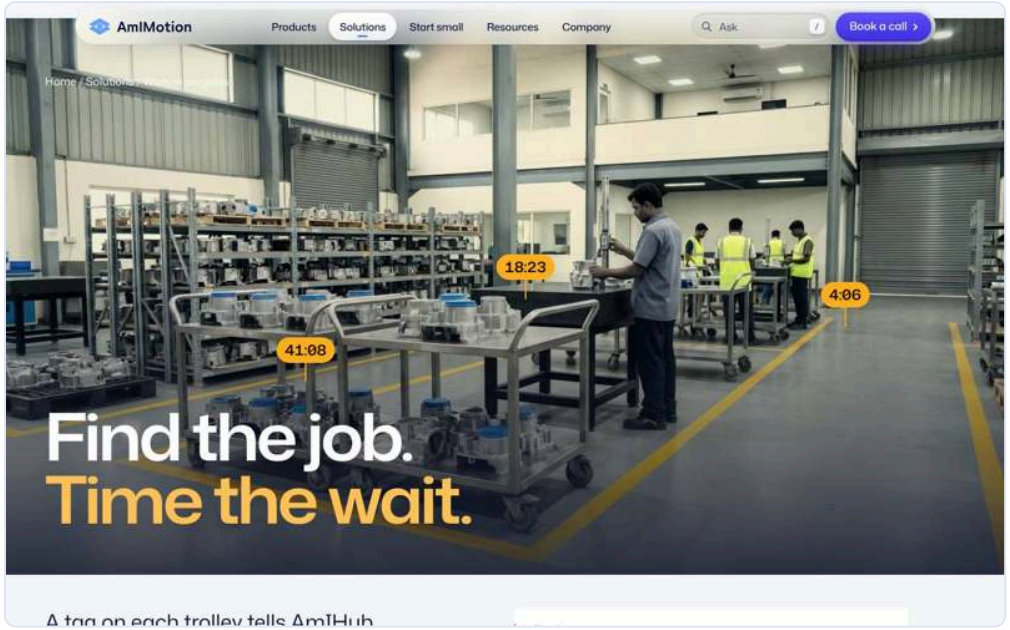

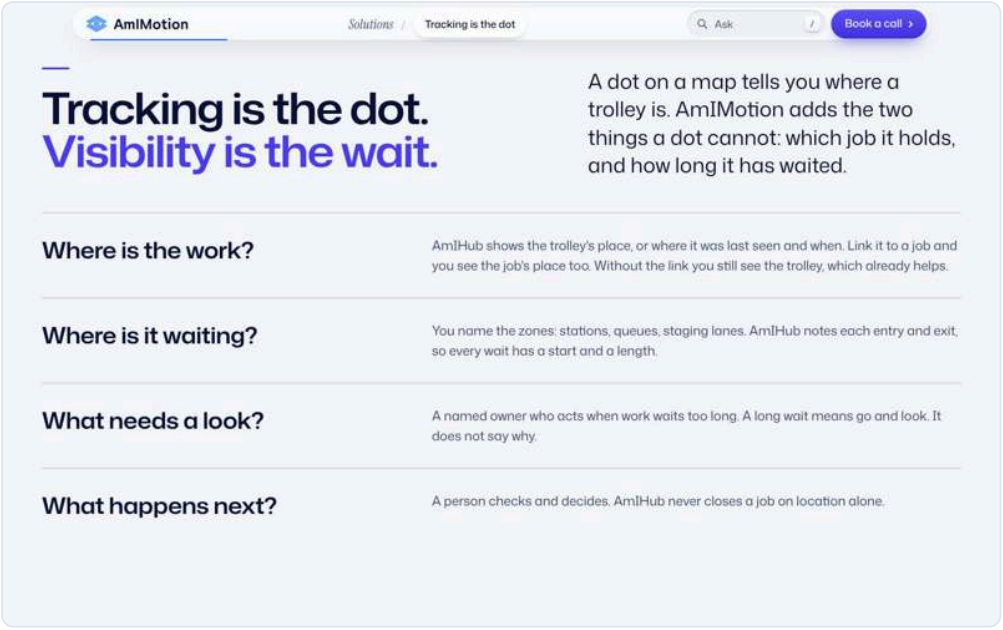

WHERE IT HELPS

/solutions/wip/

The entry wedge: see where work waits. This is the page we want most visitors to reach.

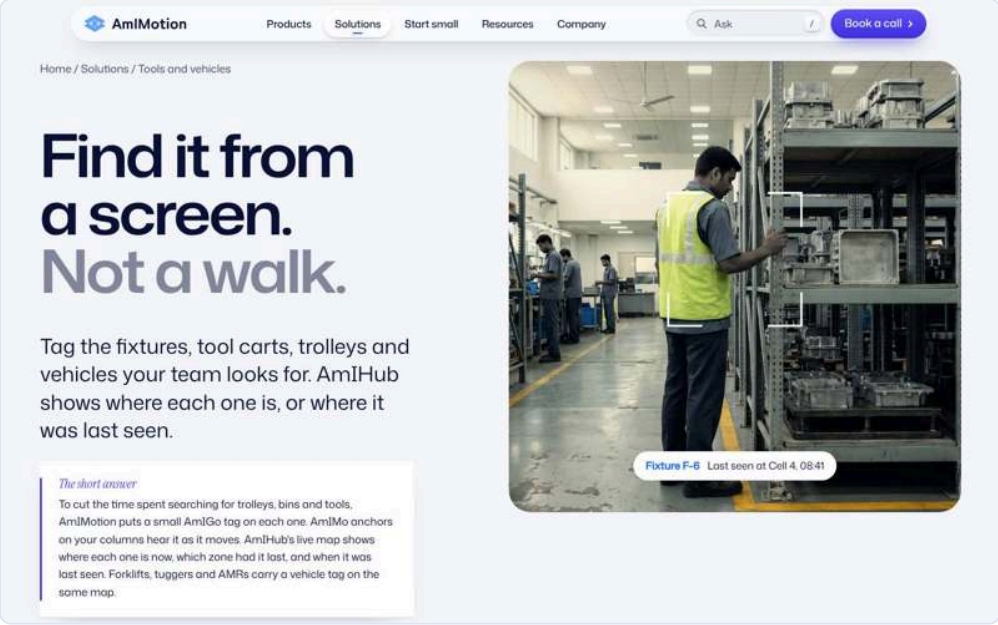

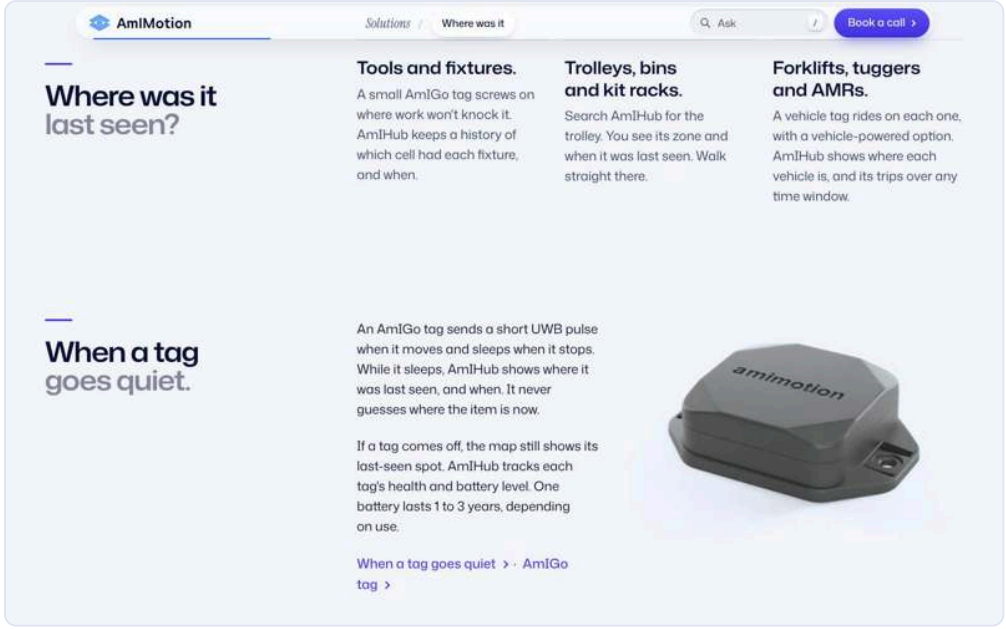

WHERE IT HELPS

/solutions/assets/

Find tools, fixtures and forklifts from a screen.

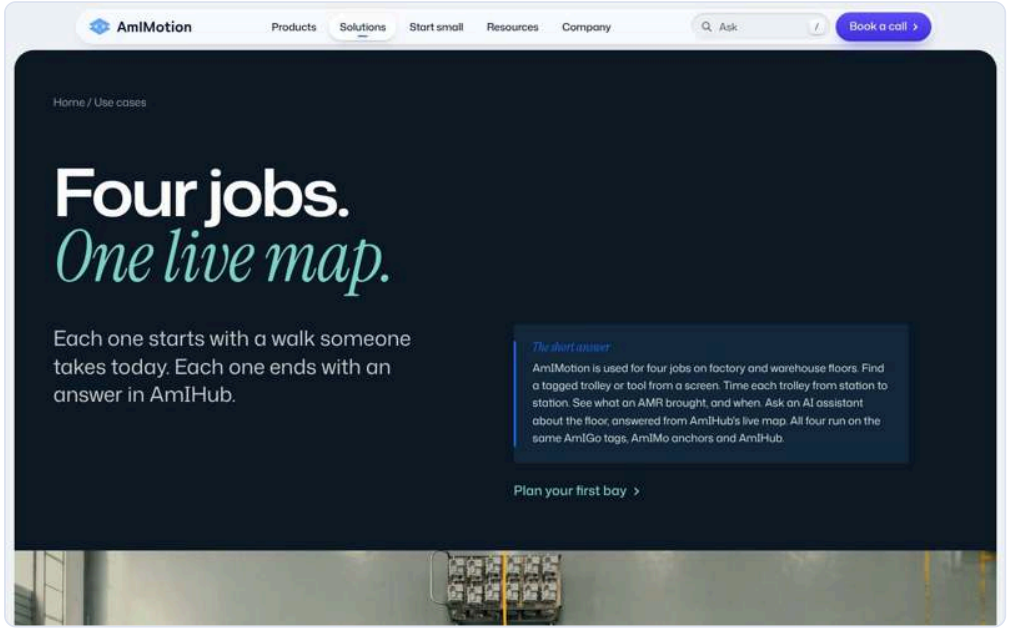

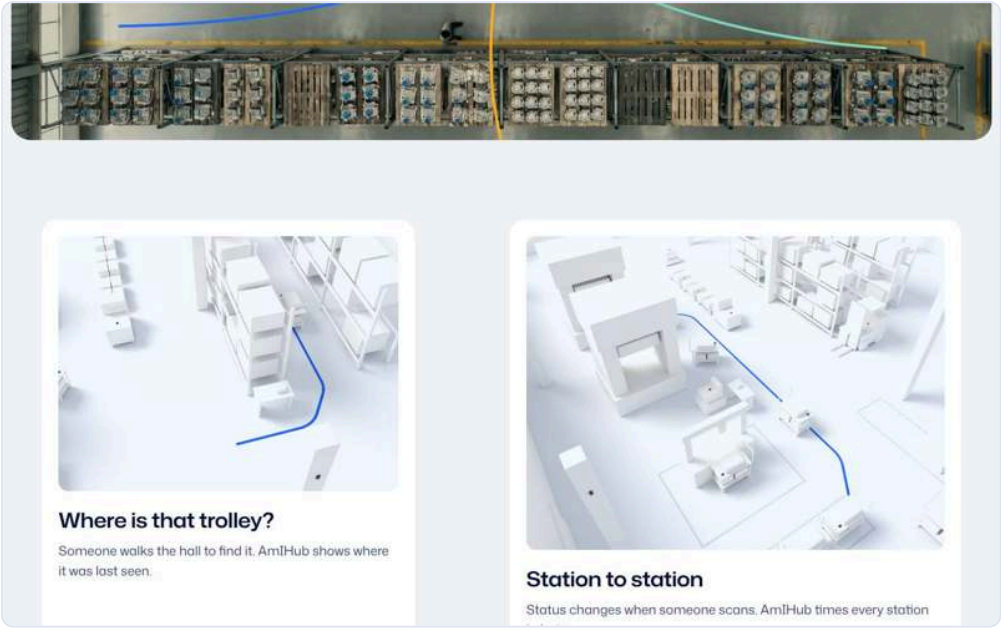

WHERE IT HELPS

/use-cases/

Four concrete stories: find, time, hand off, ask.

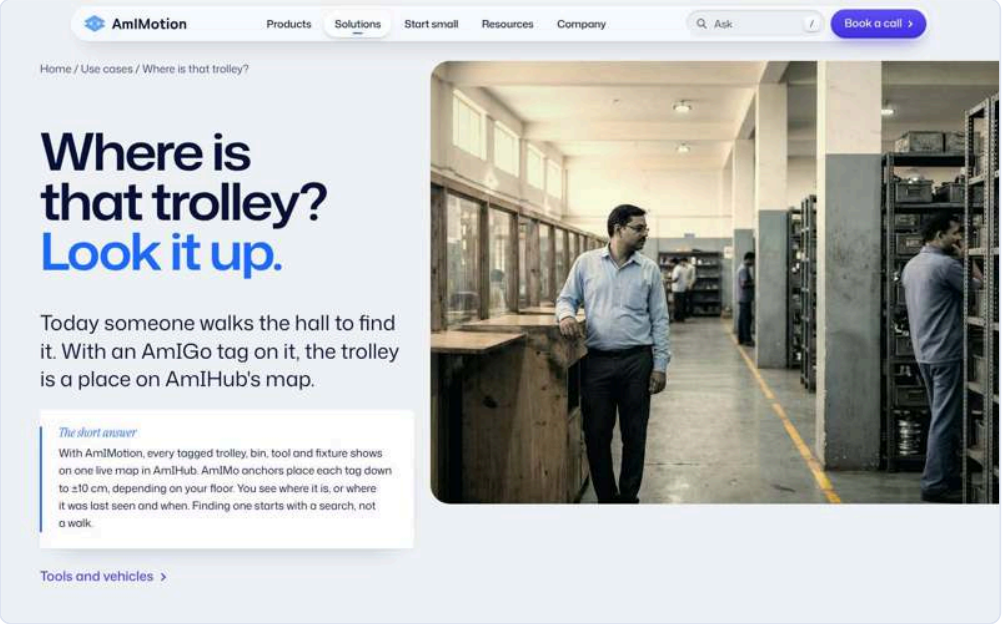

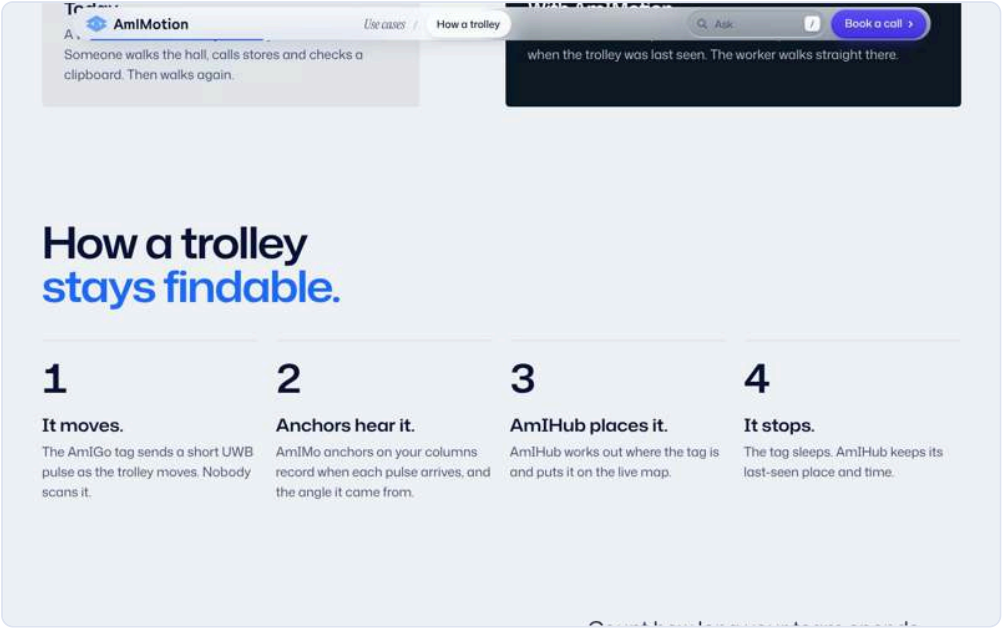

WHERE IT HELPS

/use-cases/find-the-asset/

Use case: find a trolley or tool in seconds.

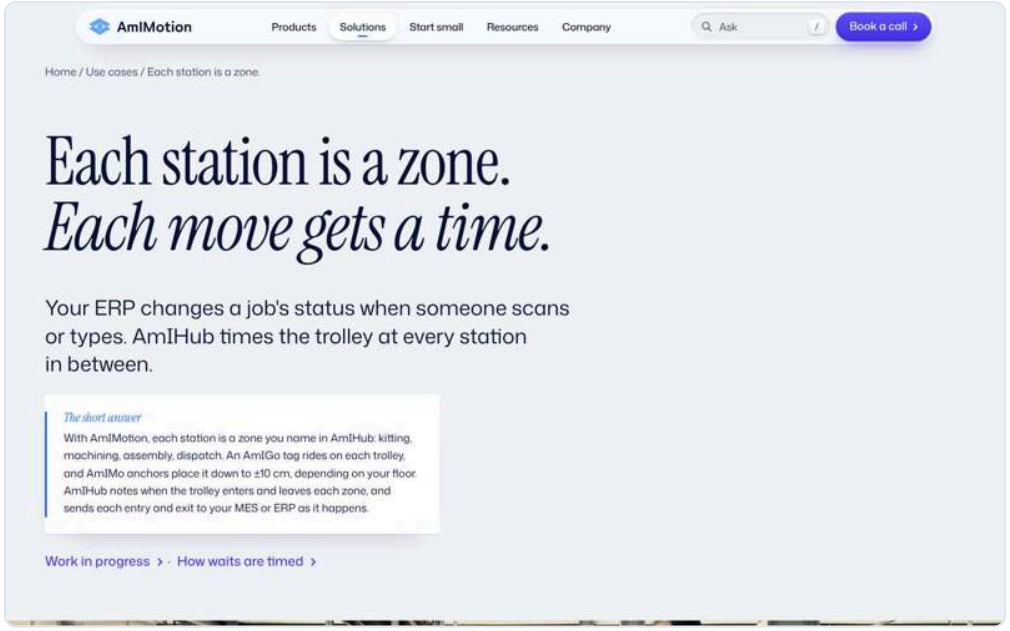

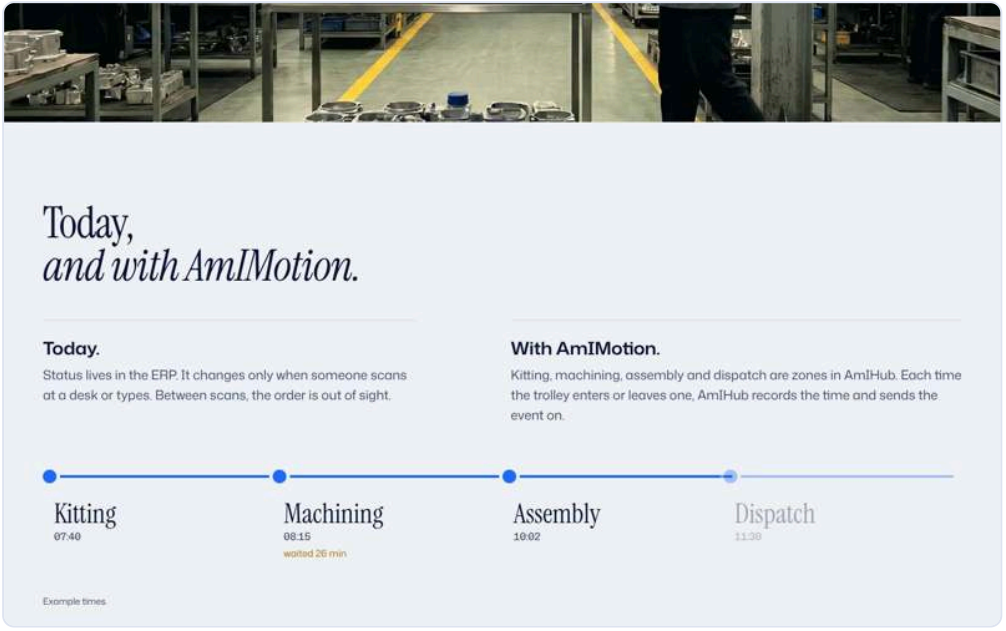

WHERE IT HELPS

/use-cases/station-to-station/

Use case: time work station to station without clipboards.

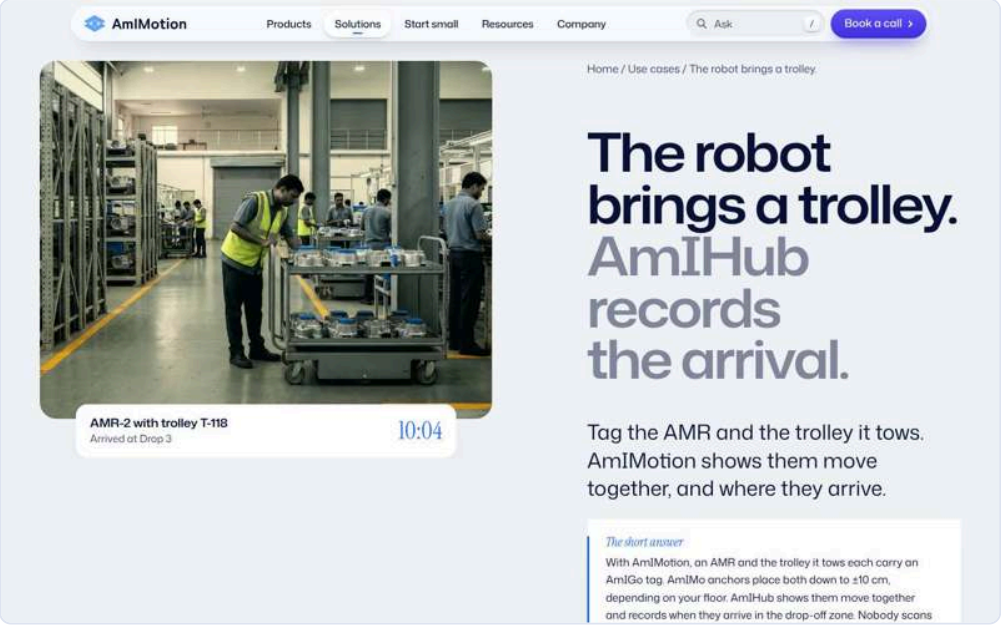

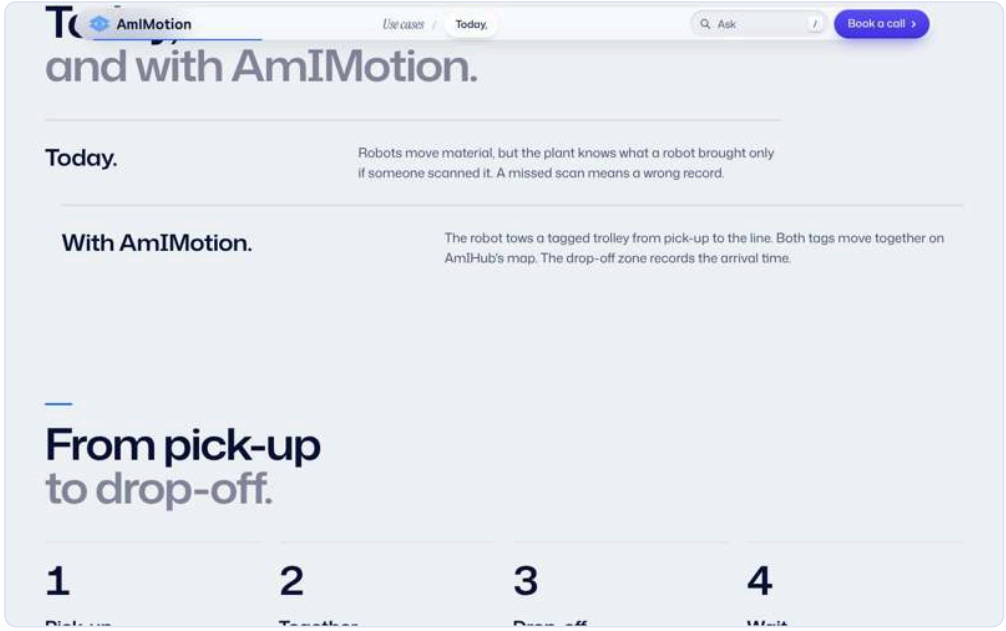

WHERE IT HELPS

/use-cases/amr-hand-off/

Use case: see what a robot brought and where it left it.

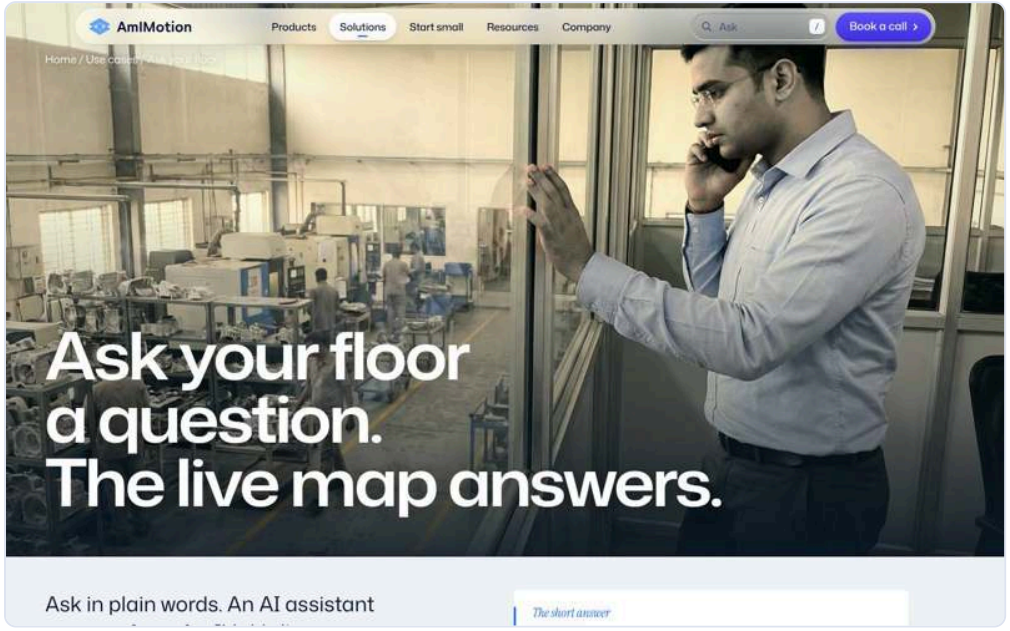

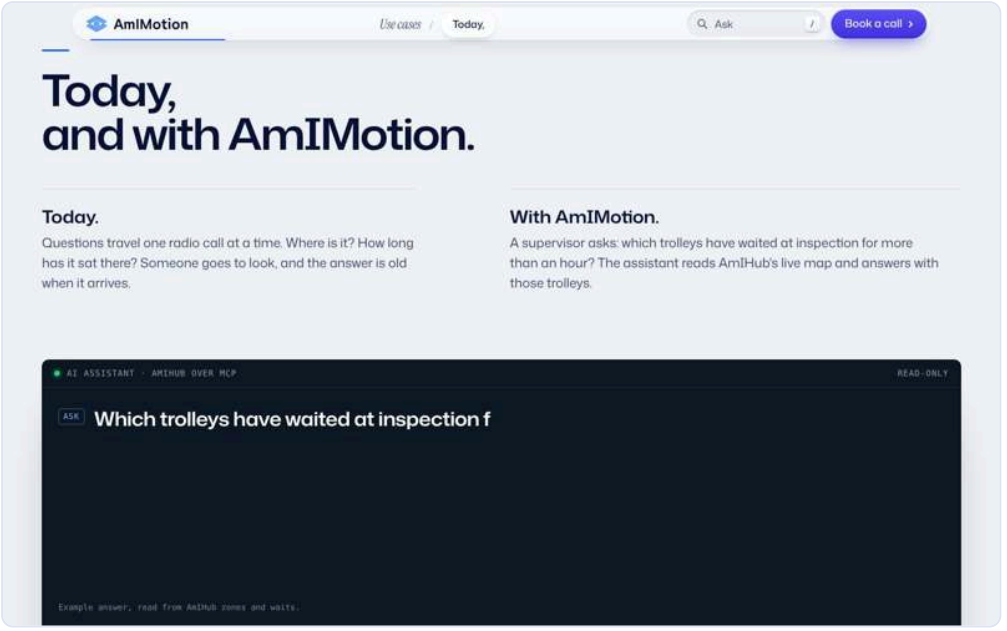

WHERE IT HELPS

/use-cases/ask-your-plant/

Use case: ask the floor a question through an AI assistant (MCP).

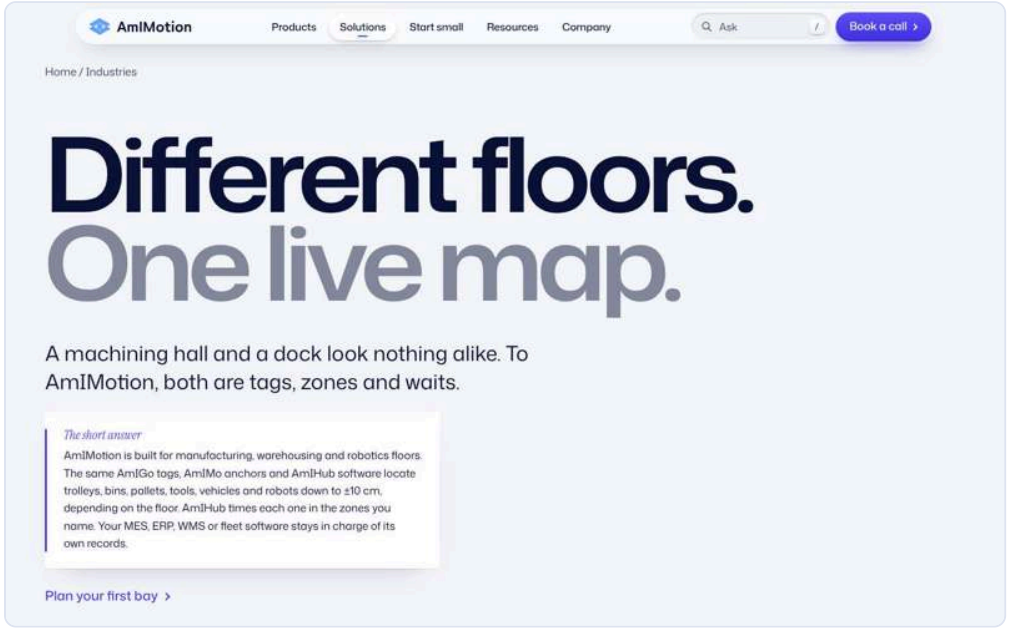

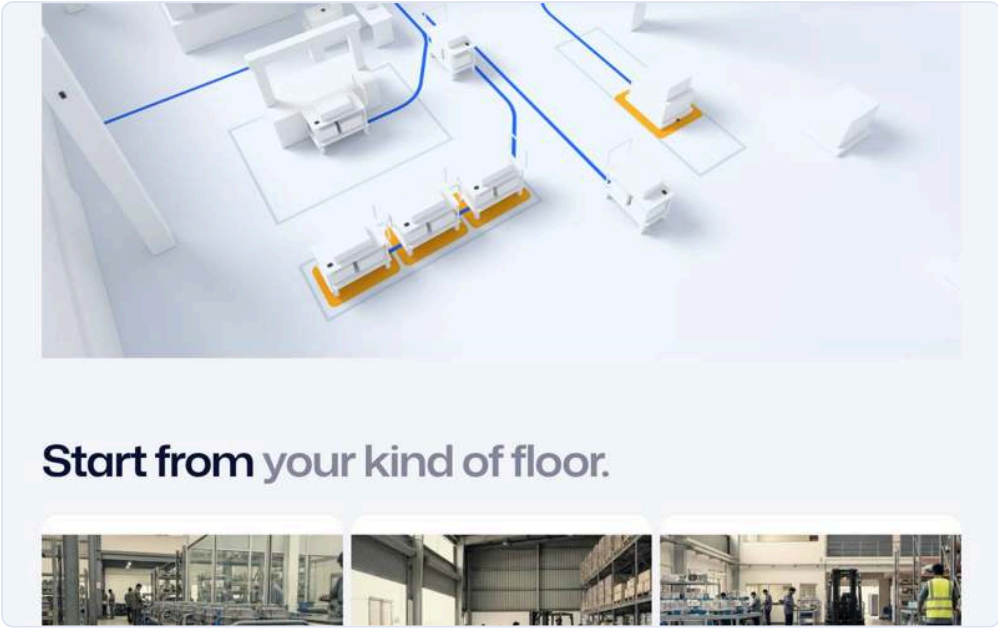

WHERE IT HELPS

/industries/

Three industries, so each buyer finds their own floor fast.

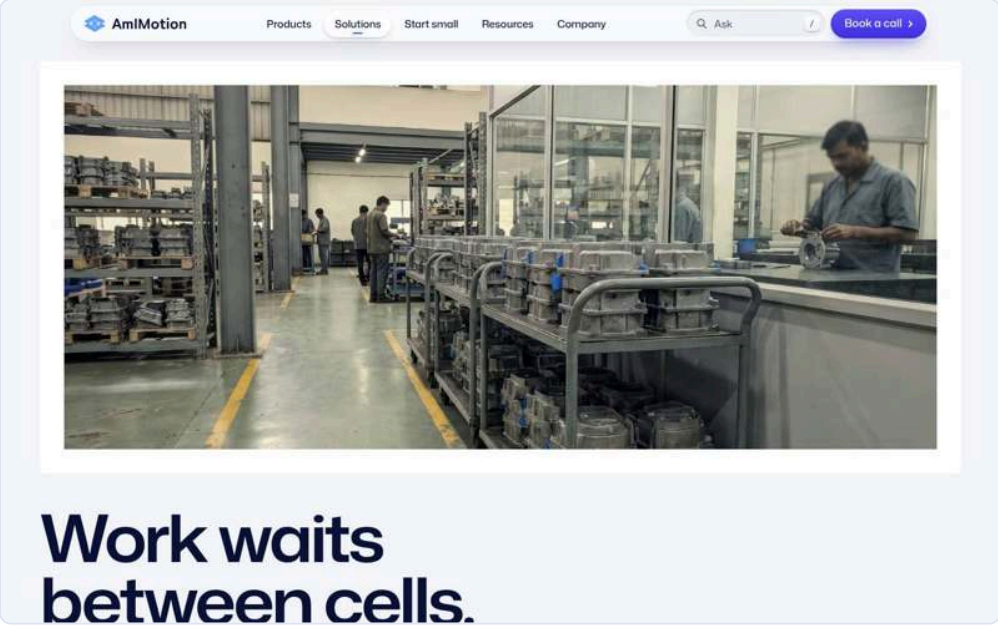

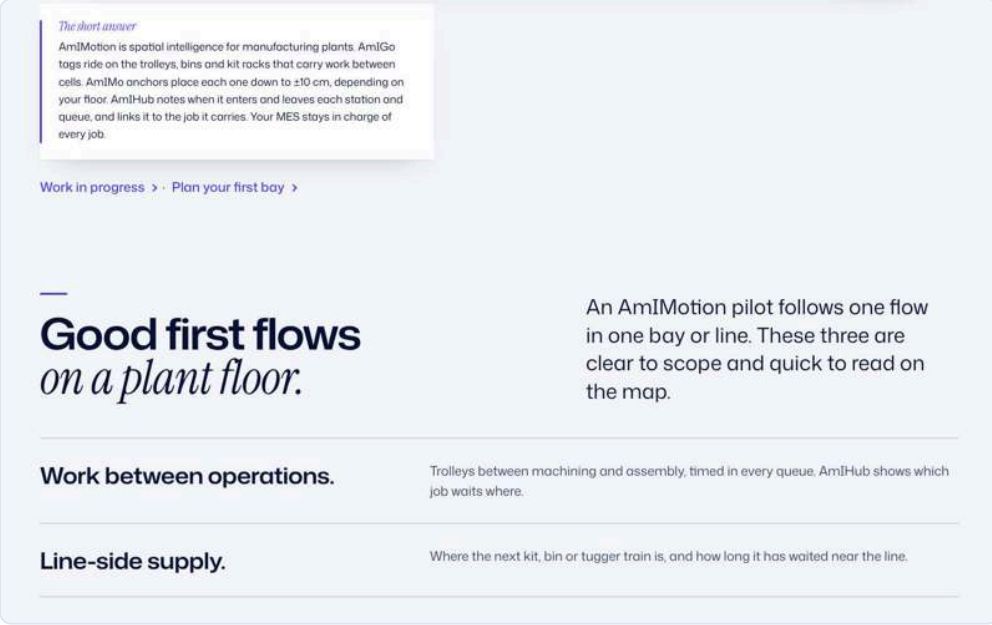

WHERE IT HELPS

/industries/manufacturing/

Manufacturing: trolleys and bins between cells, lines and inspection.

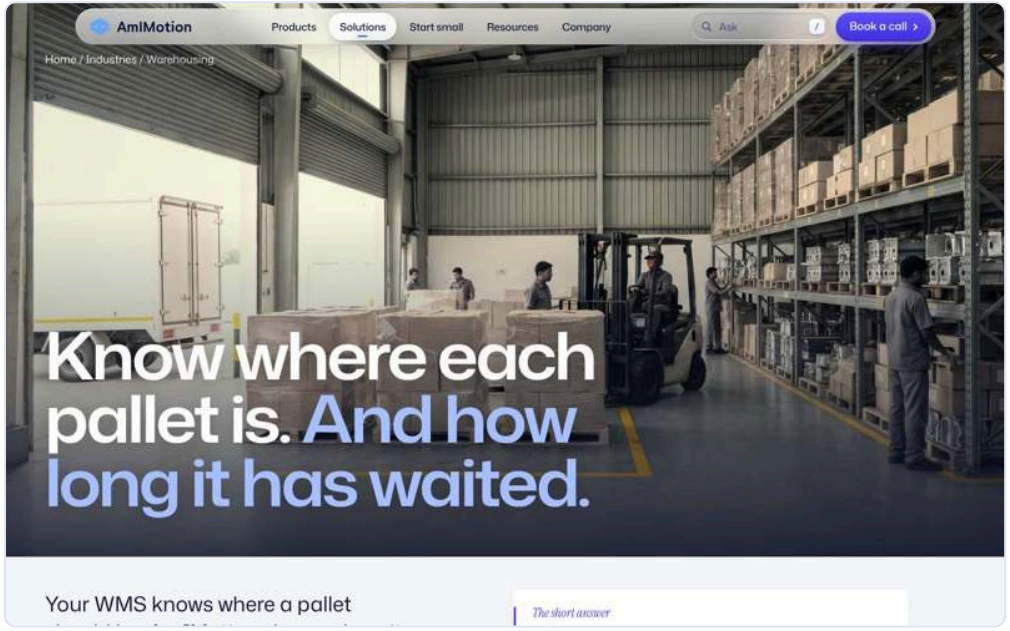

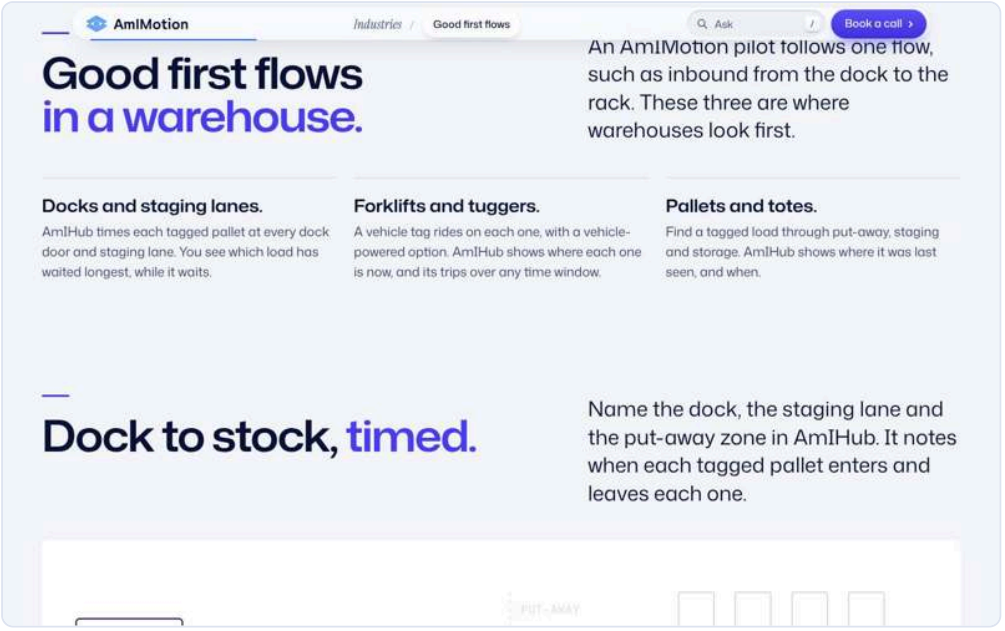

WHERE IT HELPS

/industries/warehousing/

Warehousing: pallets, staging lanes and docks.

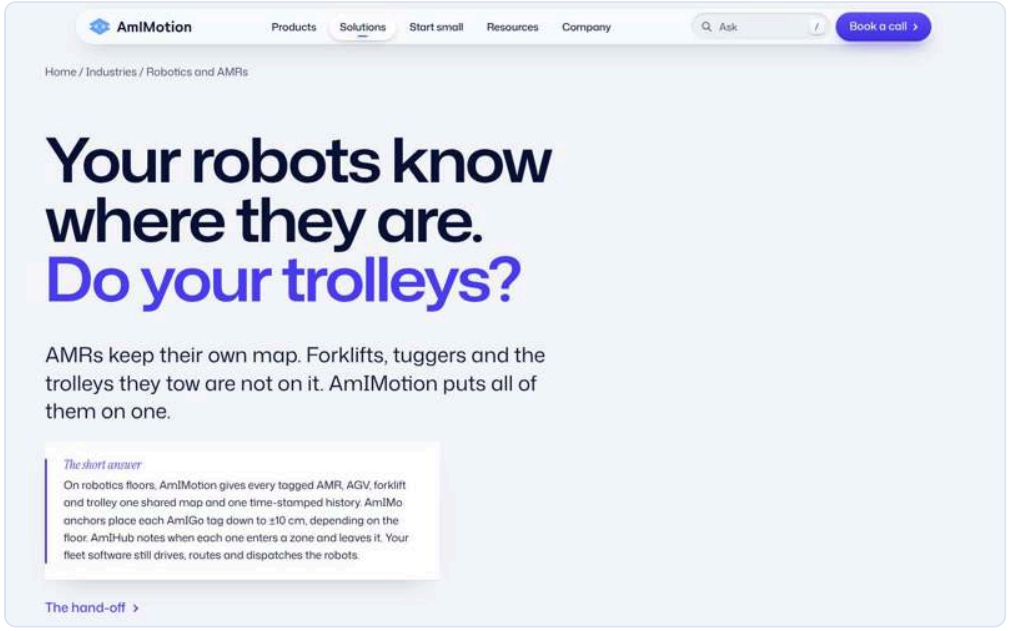

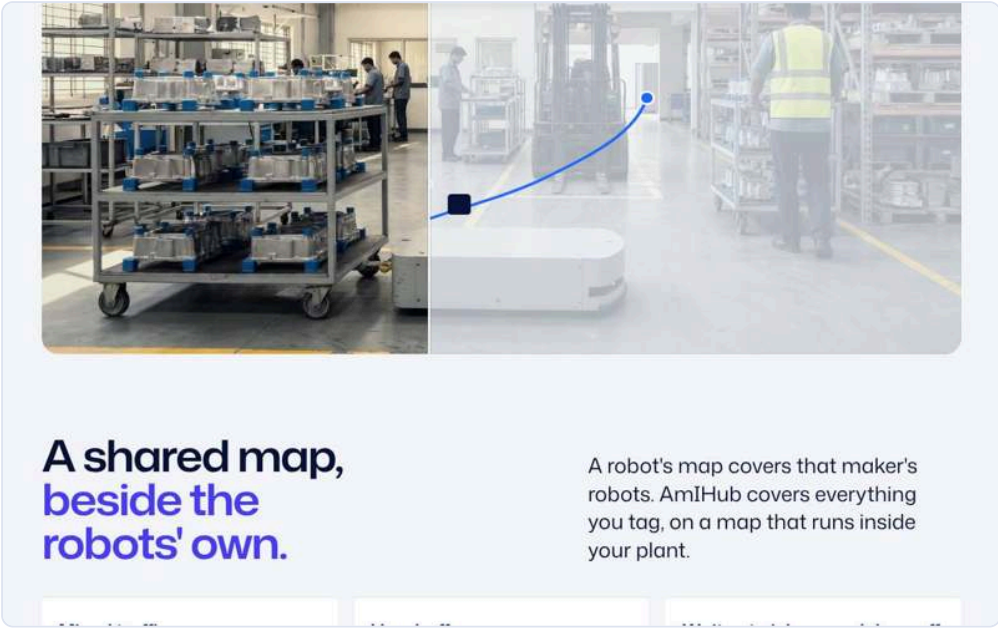

WHERE IT HELPS

/industries/robotics/

Robotics and AMRs: robots and the trolleys they tow on the same map.

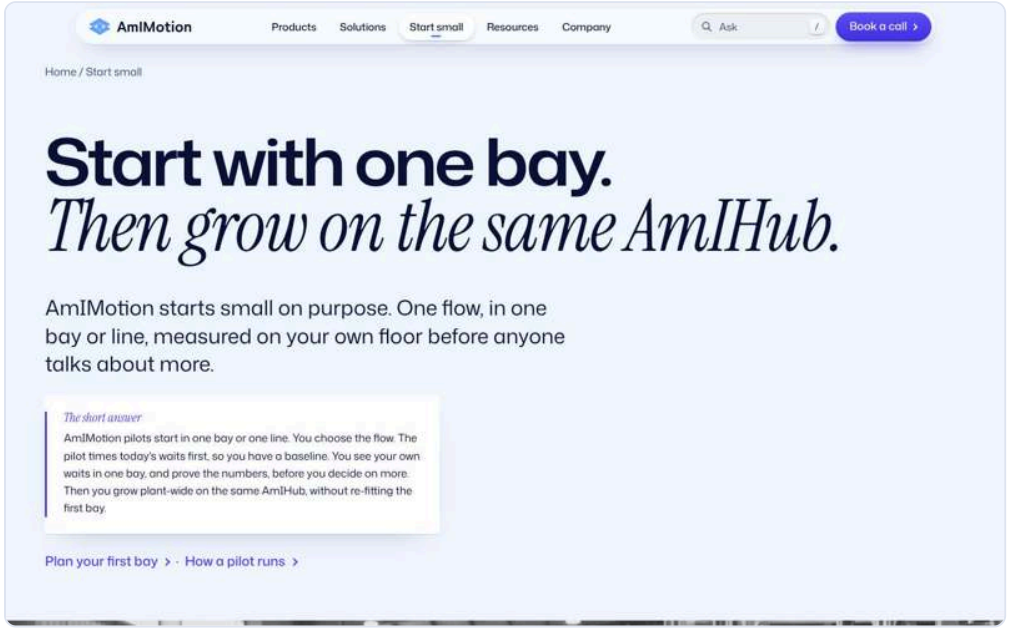

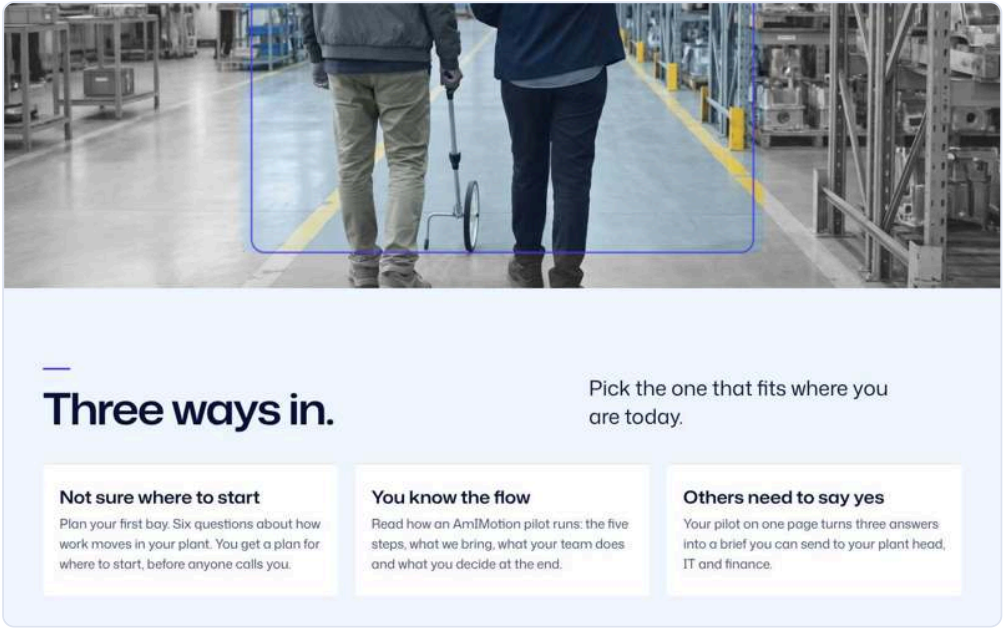

START SMALL

/start/

The offer: one bay first. Lowers the risk of saying yes.

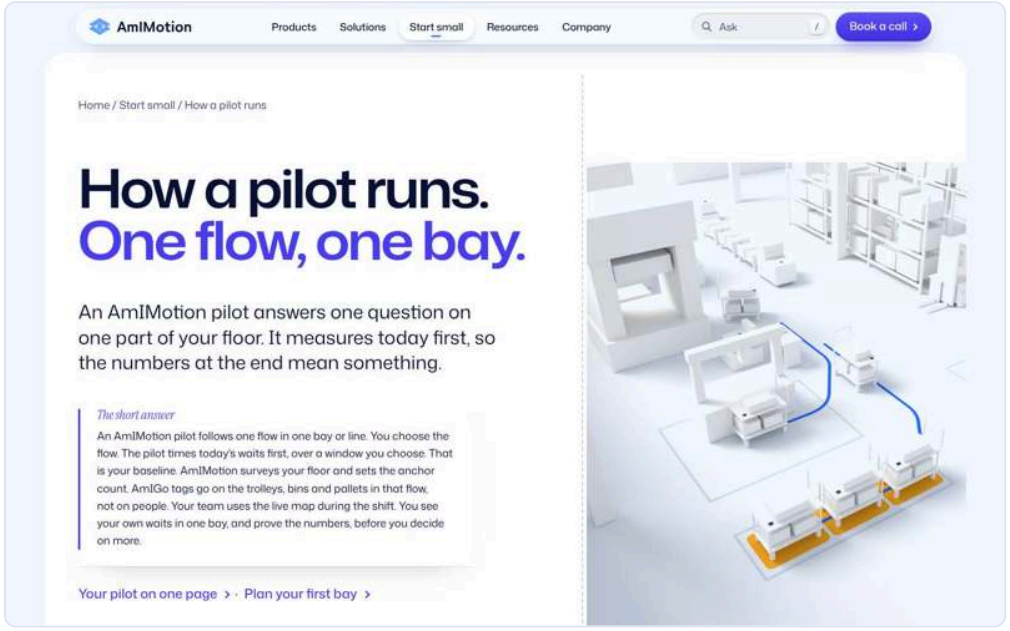

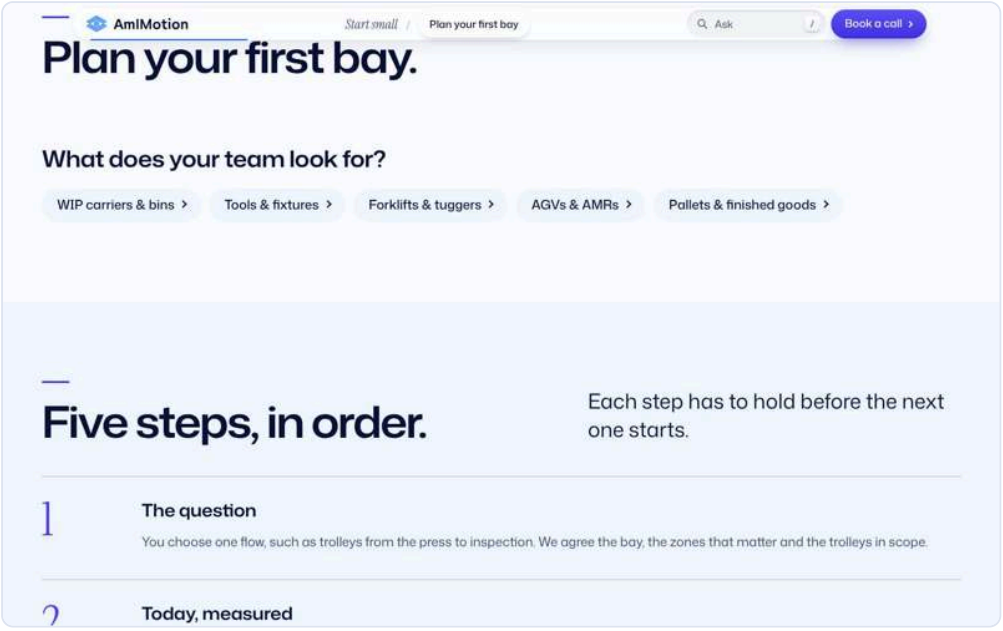

START SMALL

/pilot/

How a pilot runs, step by step, so procurement knows what they are signing up for.

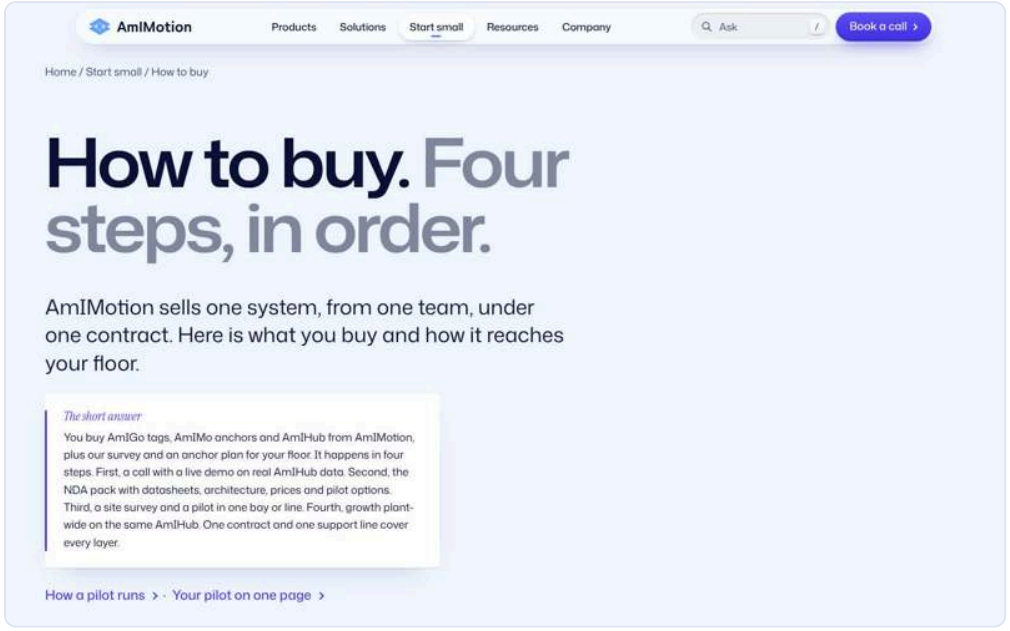

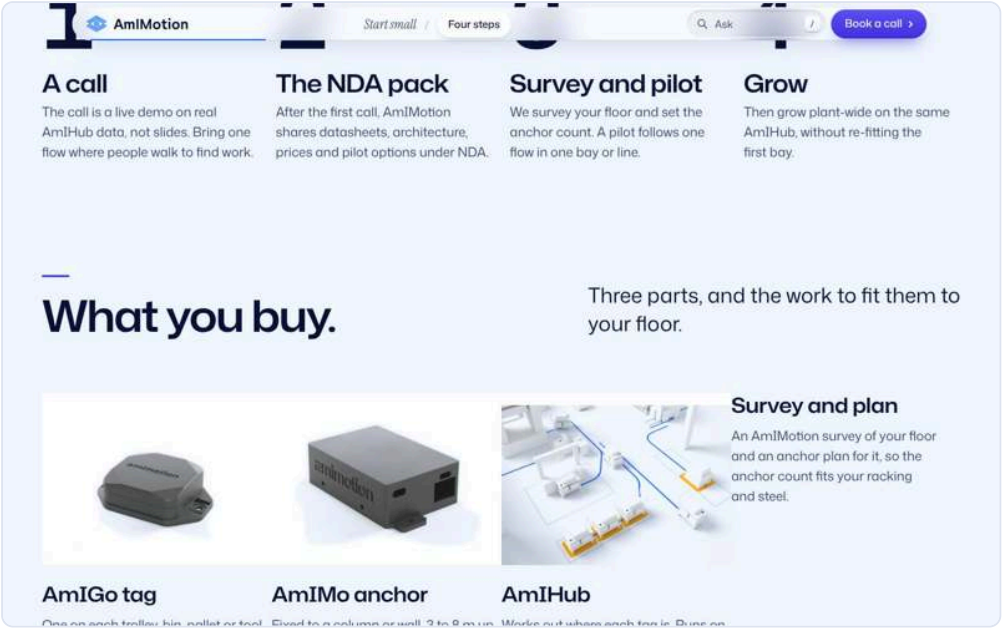

START SMALL

/how-to-buy/

Call, NDA pack, survey, pilot: the buying path made explicit.

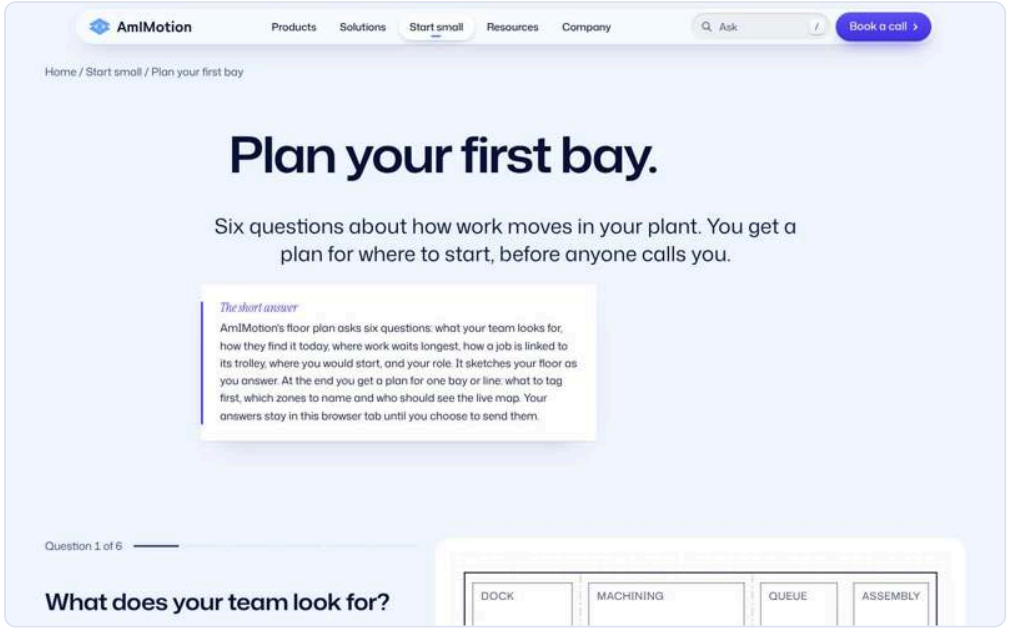

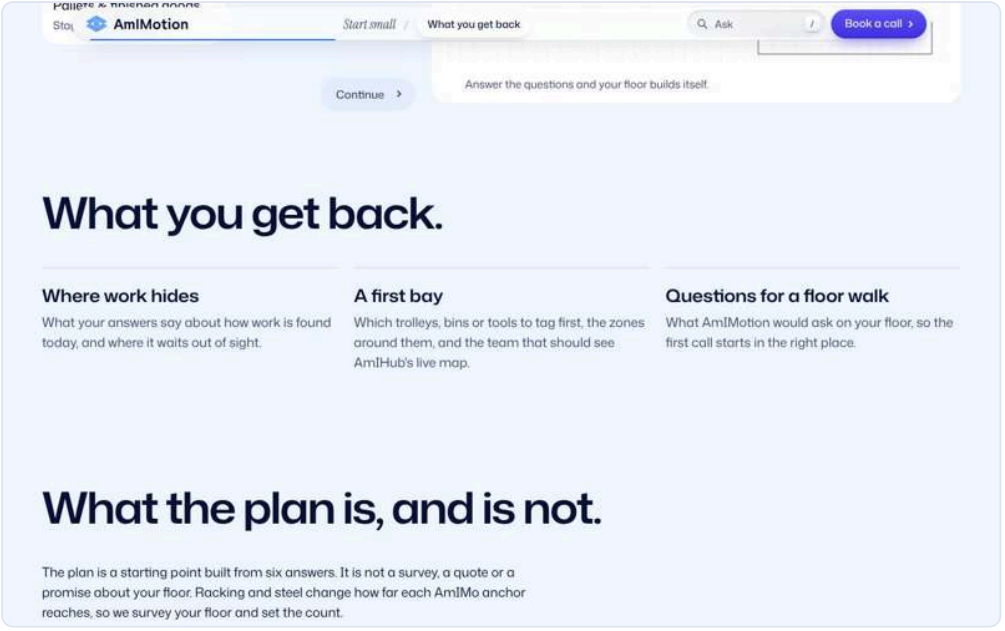

START SMALL

/diagnostic/

Lead magnet: six questions that plan the first bay and hand the answer to sales.

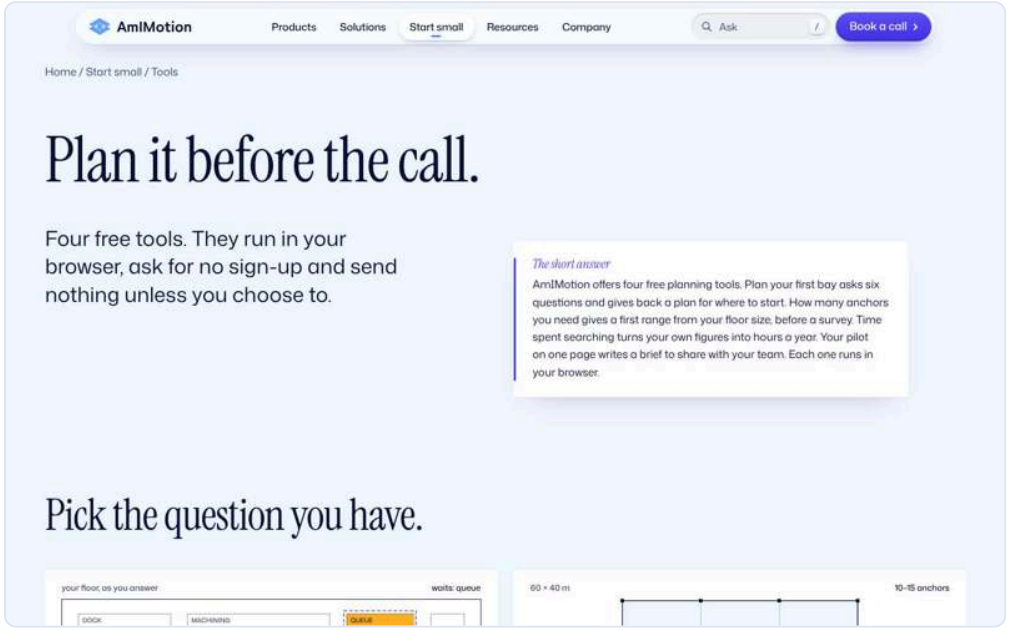

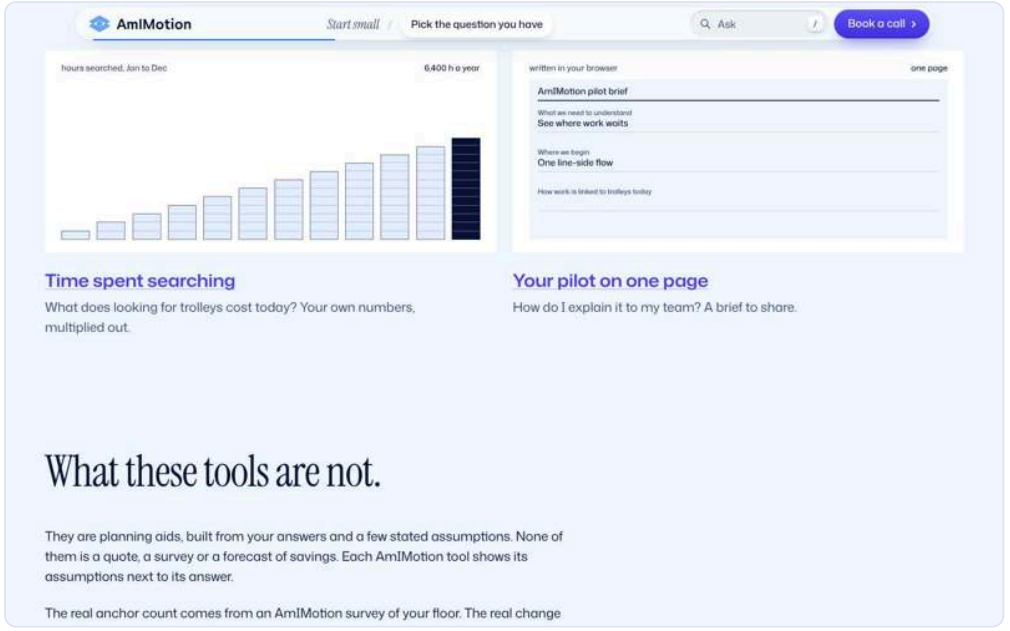

START SMALL

/tools/

Free planning tools: inbound leads from engineers doing homework.

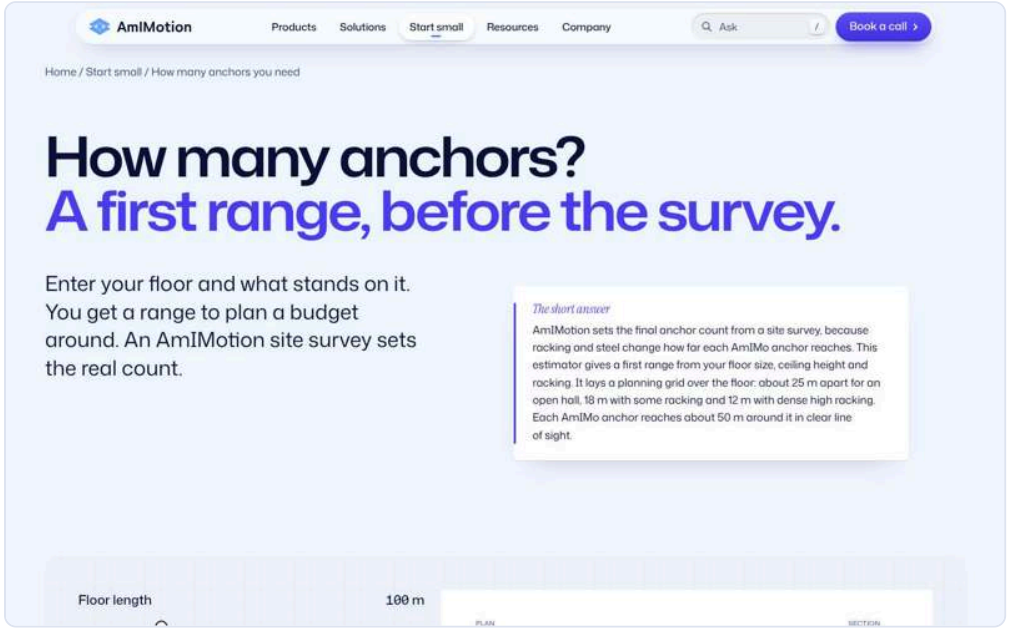

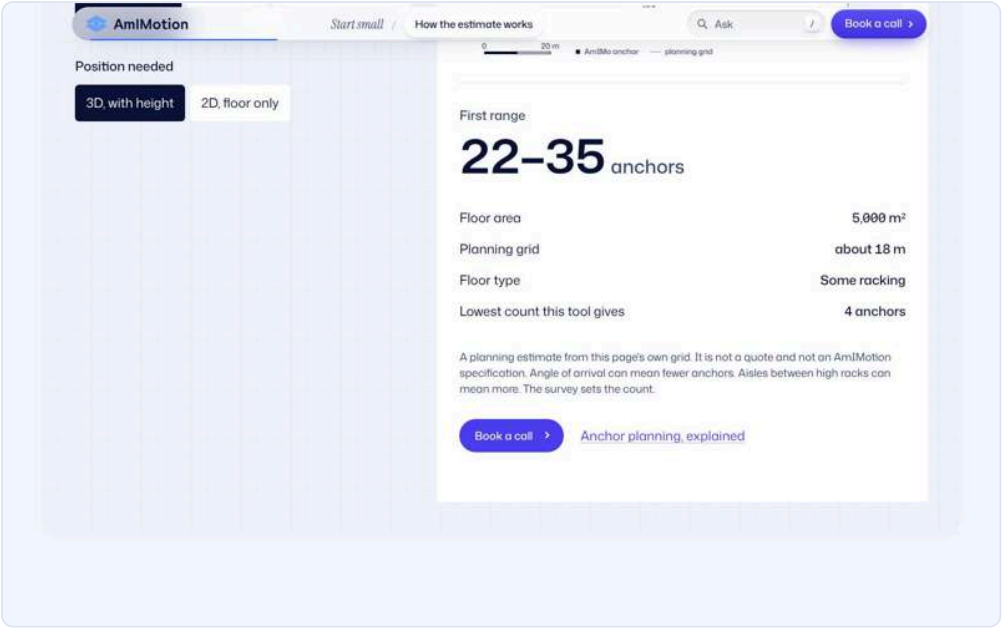

START SMALL

/tools/anchors/

Anchor estimator: a first range of anchors for a floor.

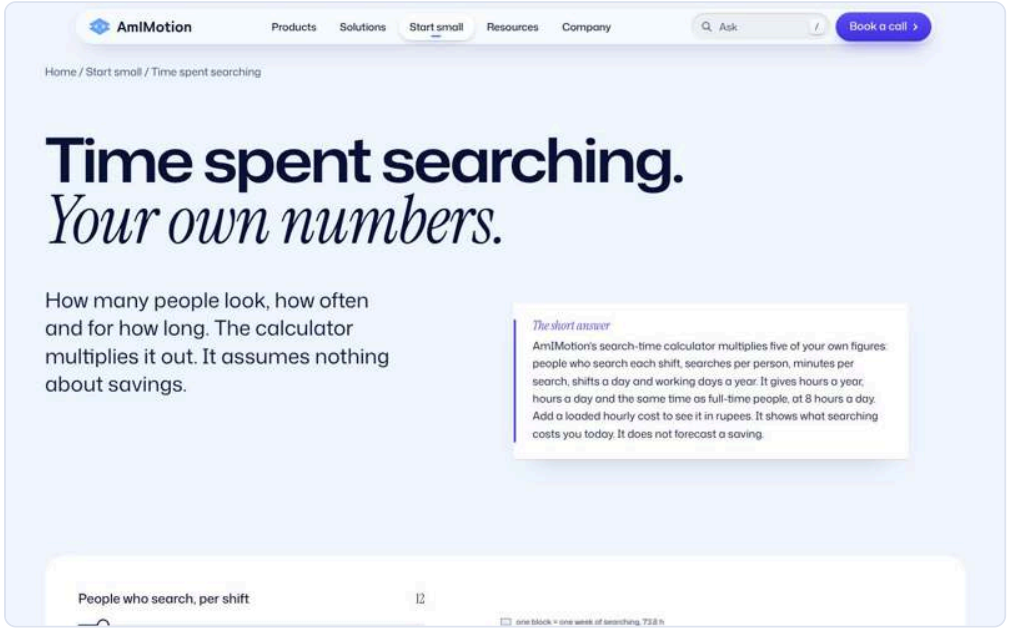

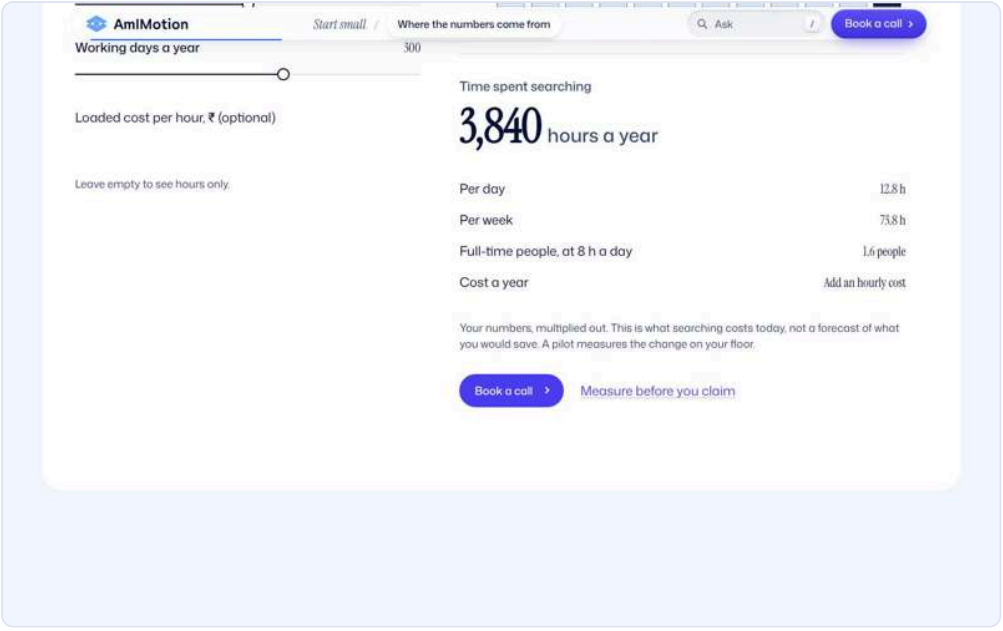

START SMALL

/tools/search-time/

Search-time calculator: puts a cost on searching, the pain we remove.

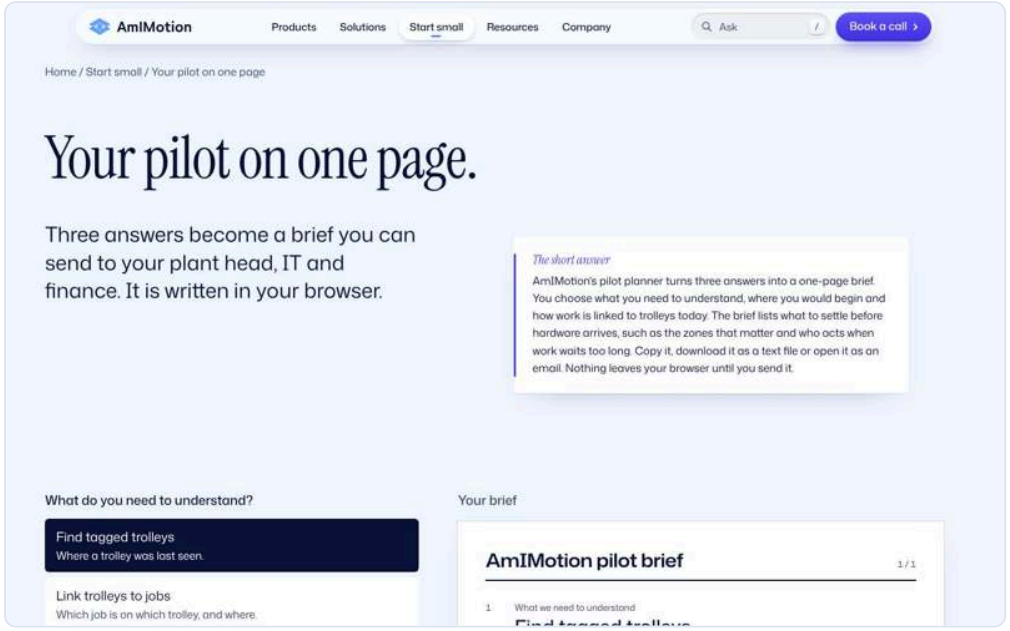

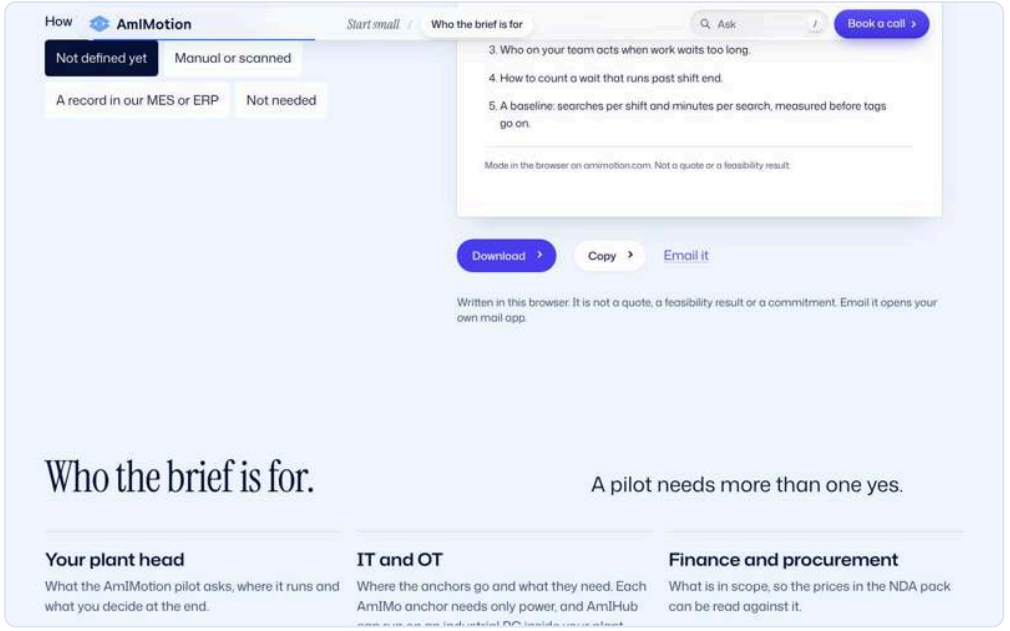

START SMALL

/tools/pilot/

Pilot brief on one page, to share inside the buyer's company.

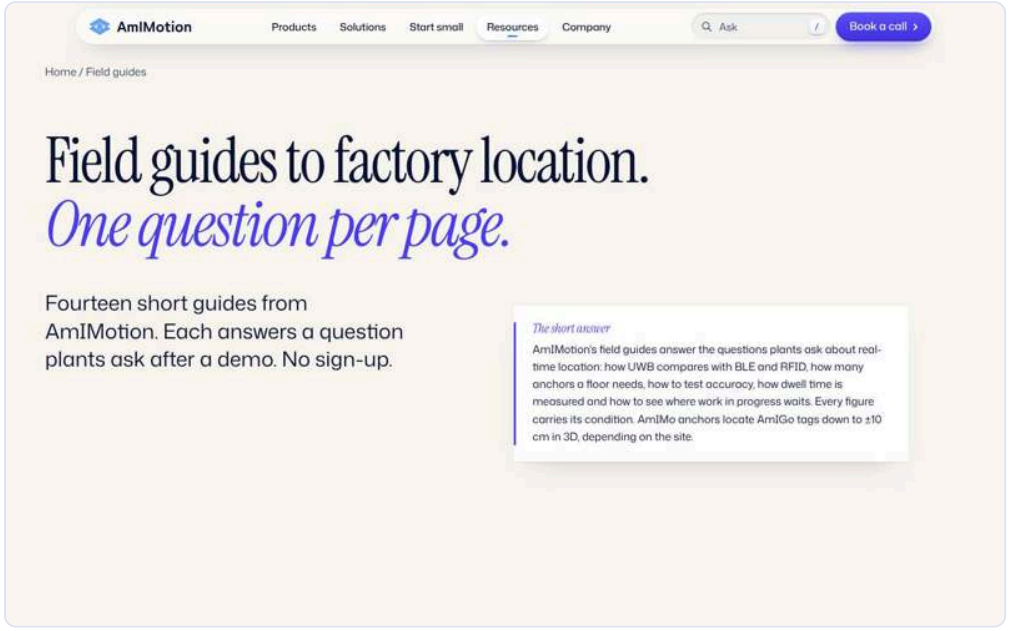

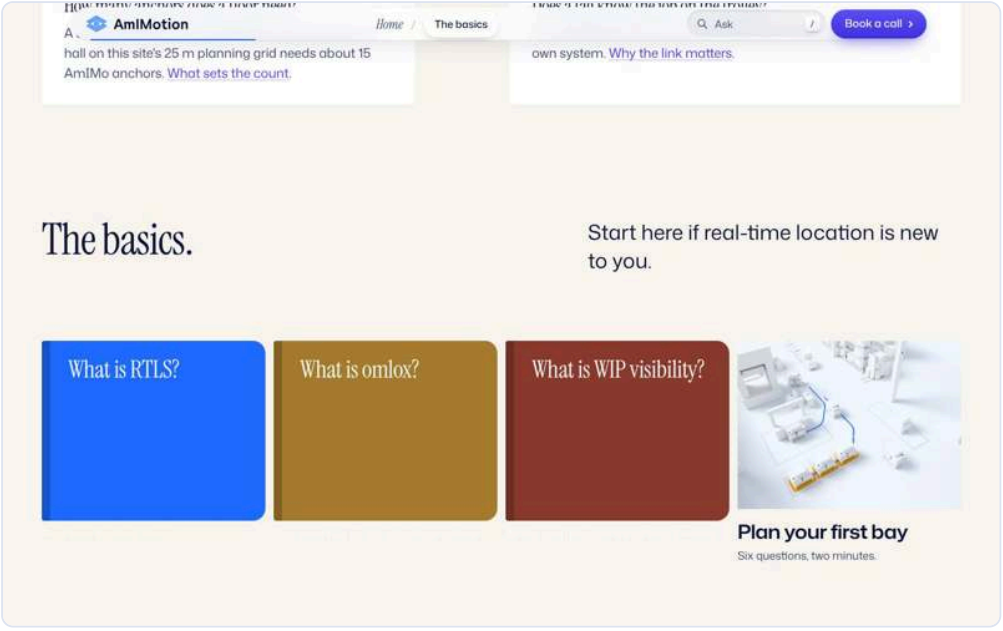

RESOURCES

/learn/

Field guides hub. Each guide answers one question buyers search for (SEO and answer engines).

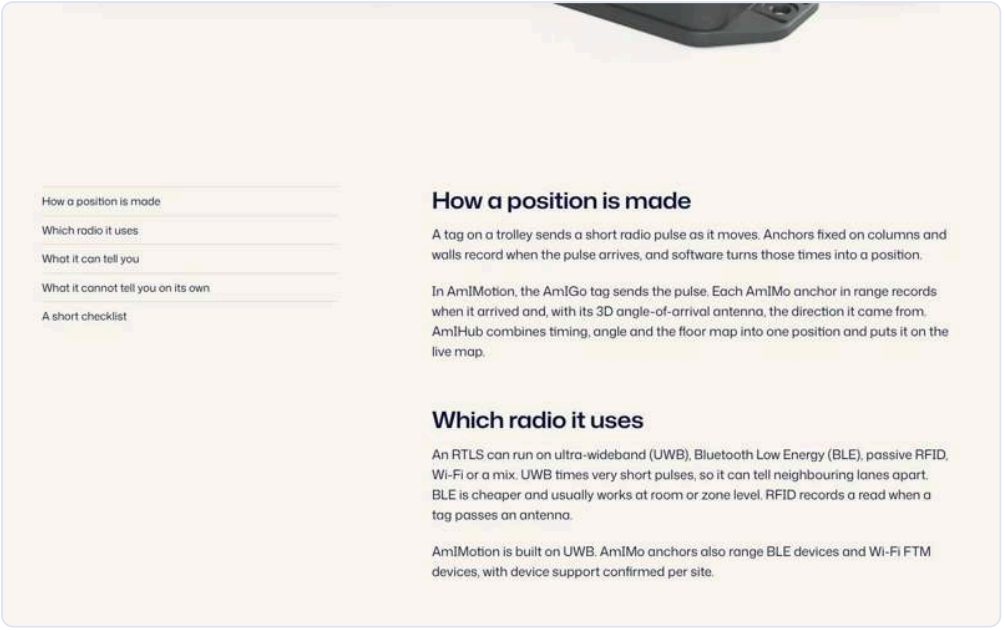

RESOURCES

/learn/rtls/

Guide: what RTLS is.

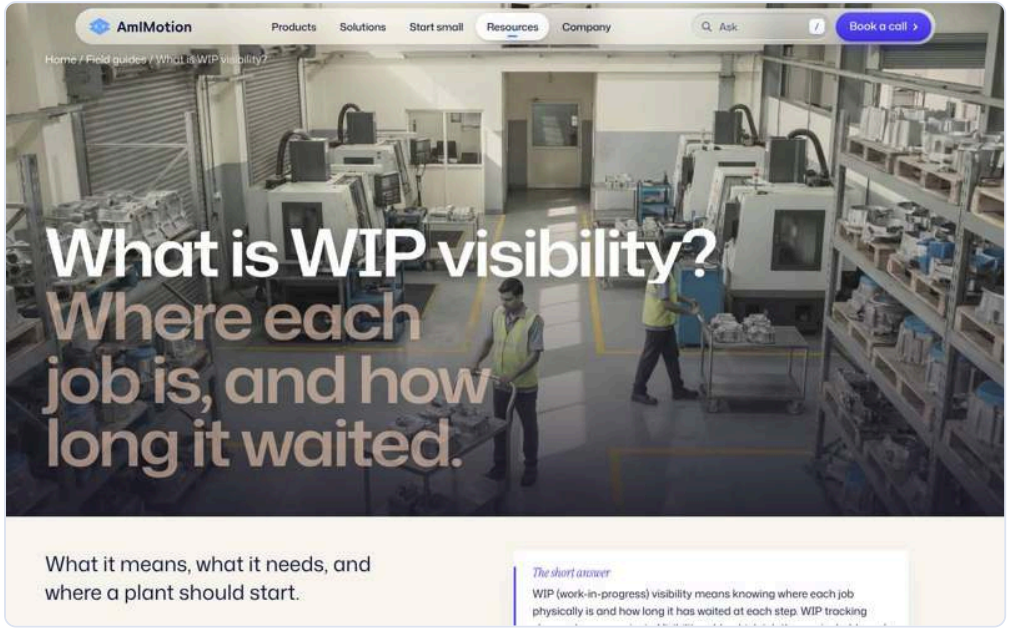

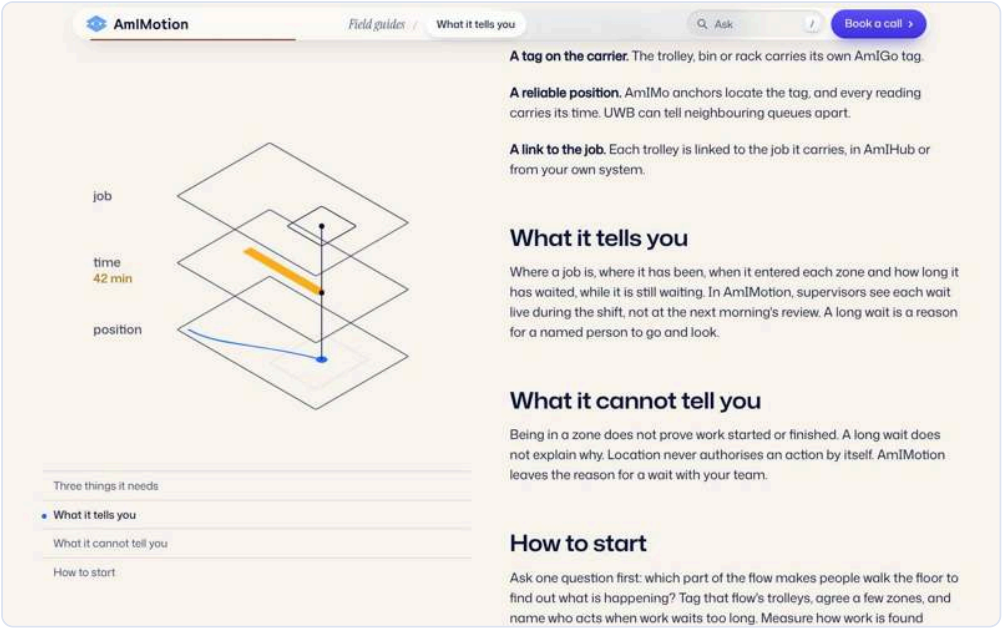

RESOURCES

/learn/wip-visibility/

Guide: tracking vs visibility for work in progress.

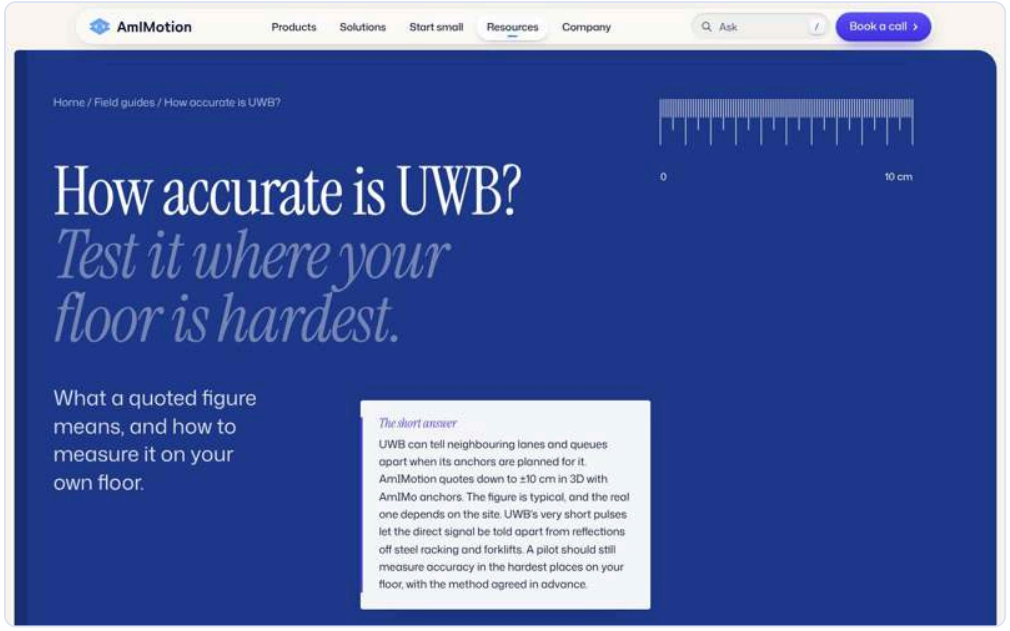

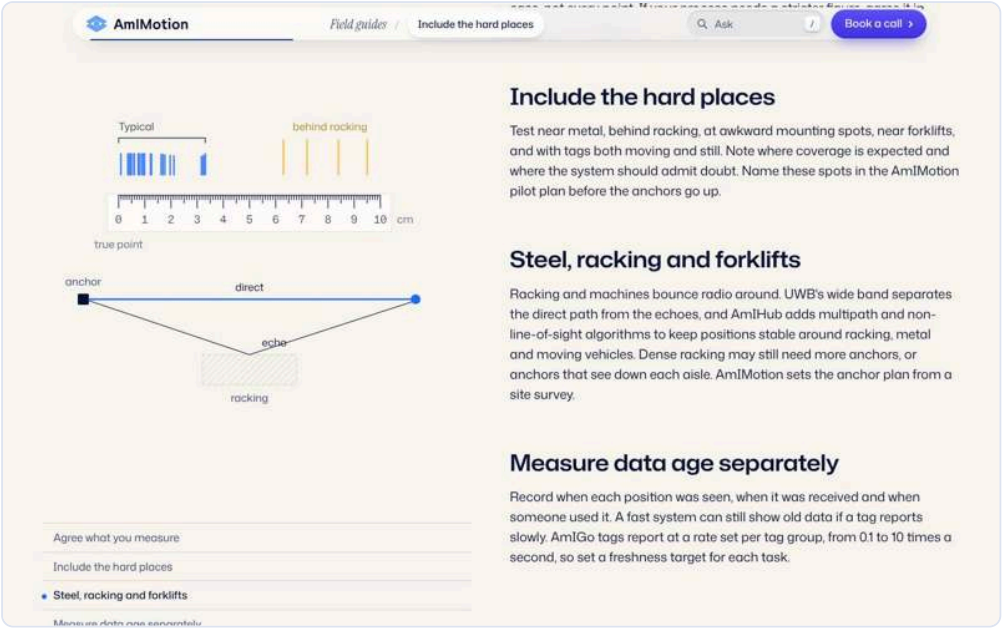

RESOURCES

/learn/accuracy/

Guide: how accurate UWB is and how to test it on your own floor.

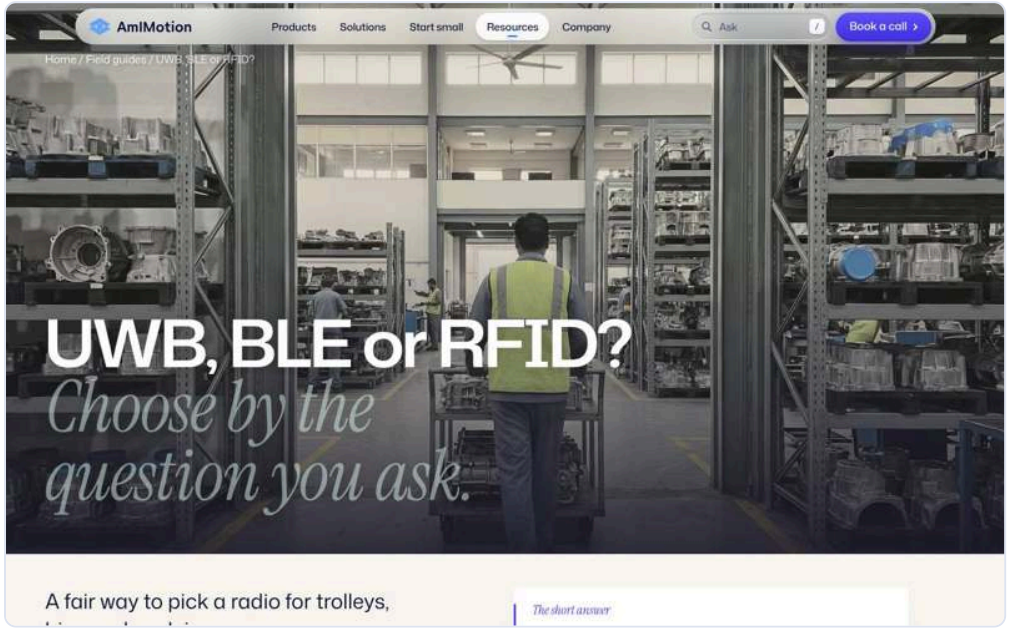

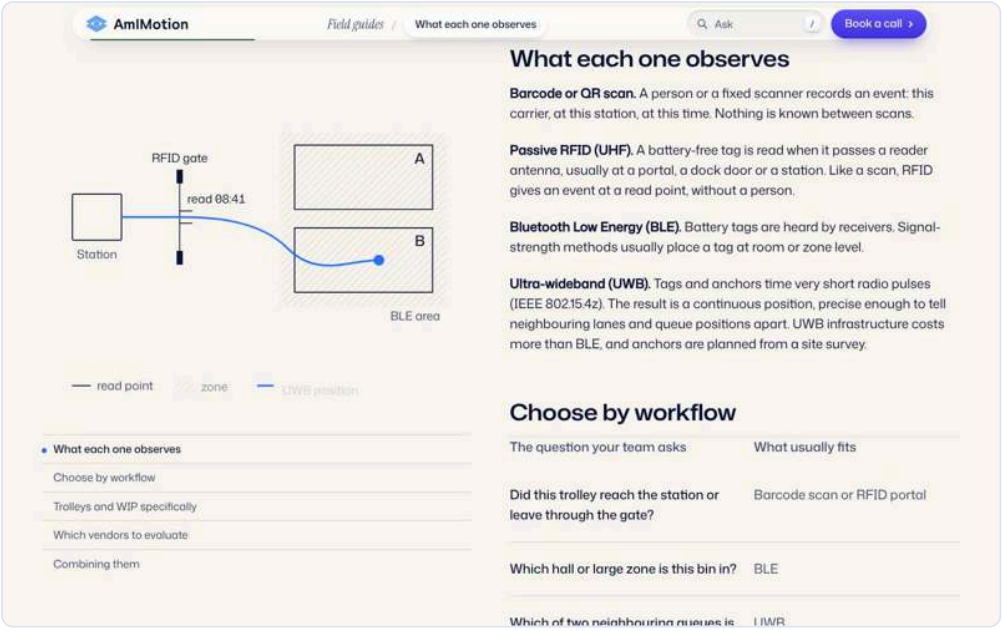

RESOURCES

/learn/uwb-vs-rfid/

Guide: UWB vs BLE vs RFID.

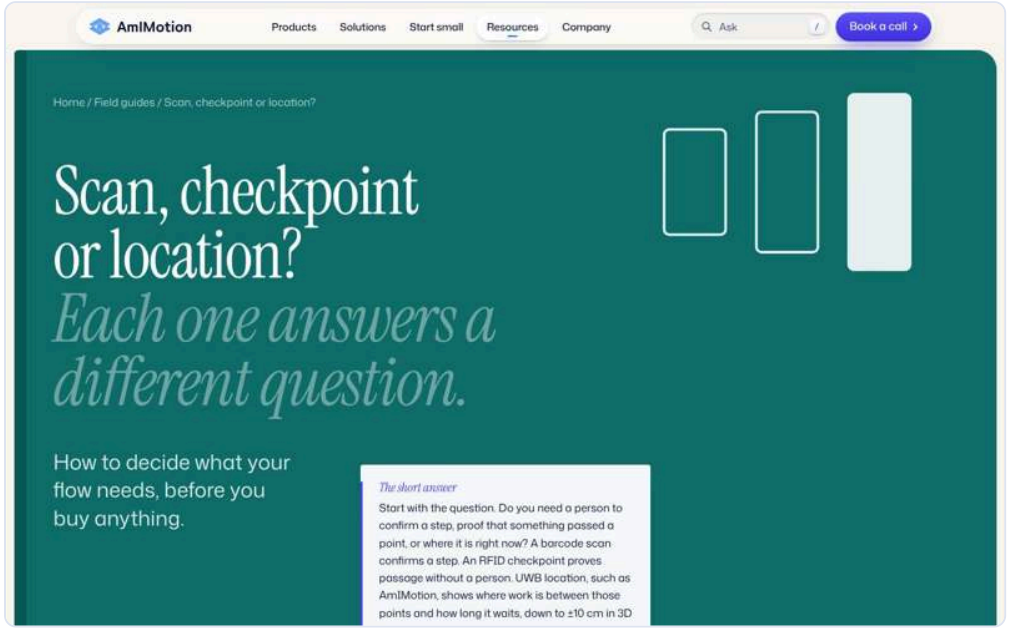

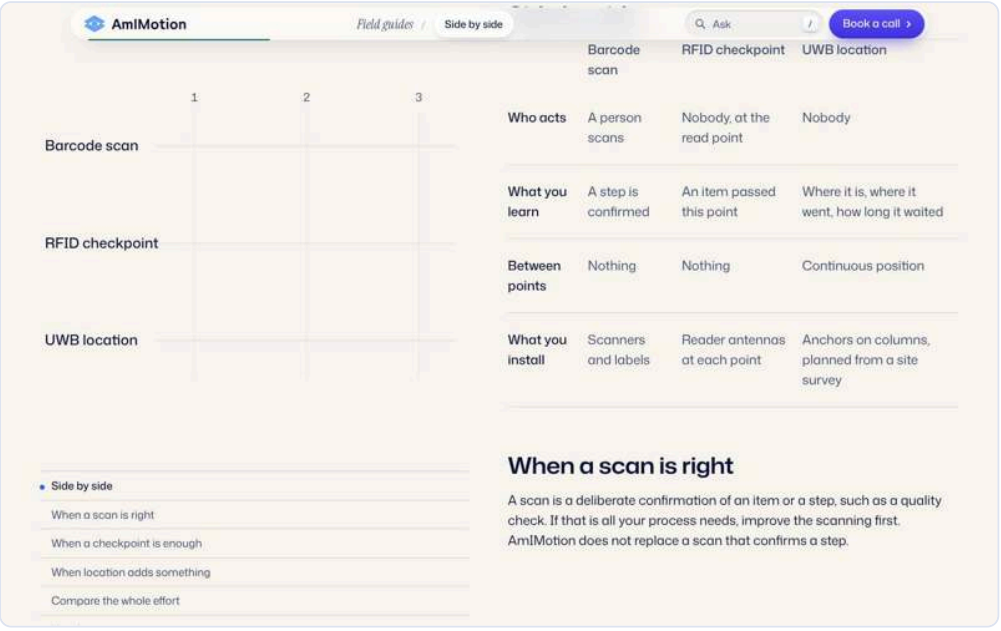

RESOURCES

/learn/alternatives/

Guide: scans, RFID checkpoints or UWB, how to choose.

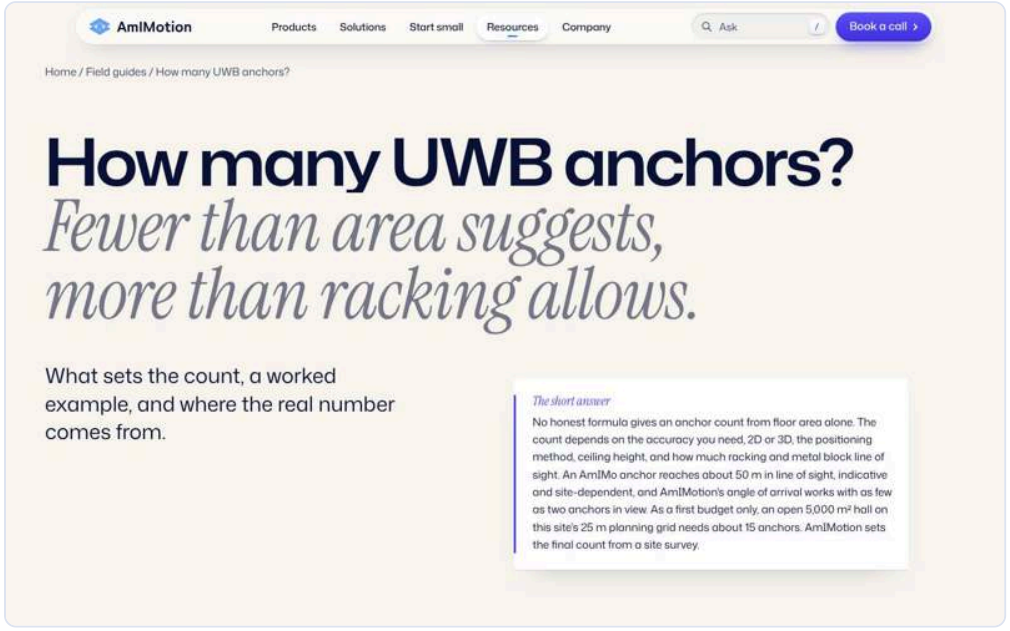

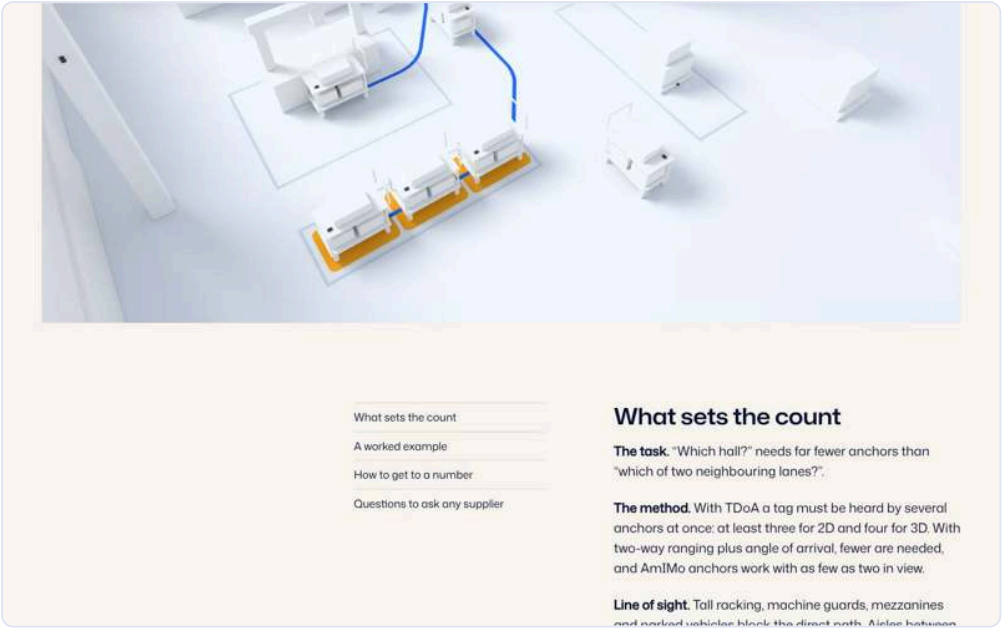

RESOURCES

/learn/anchor-planning/

Guide: how many anchors a floor needs.

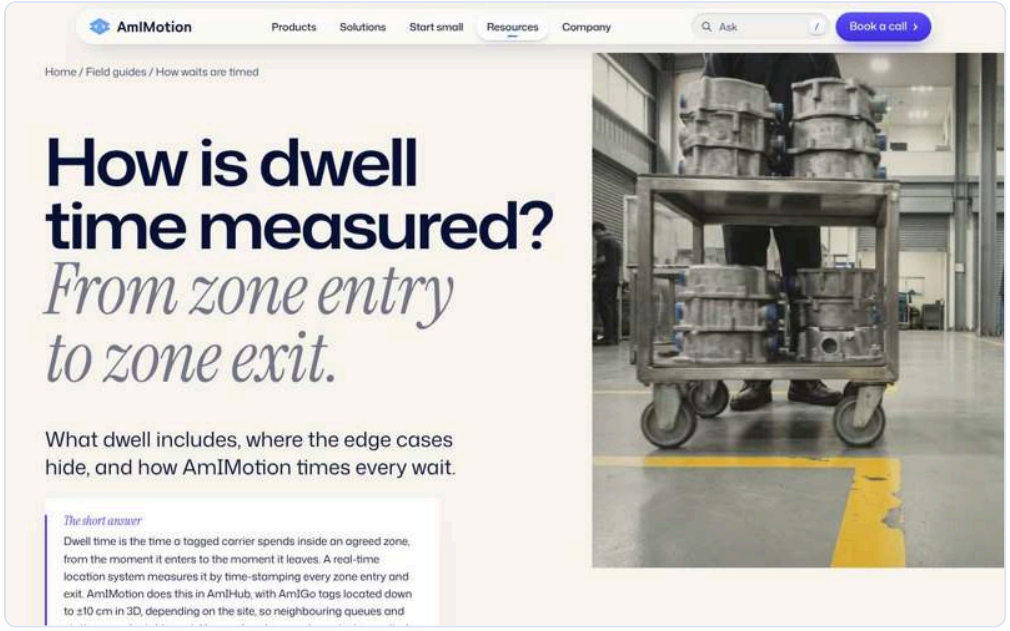

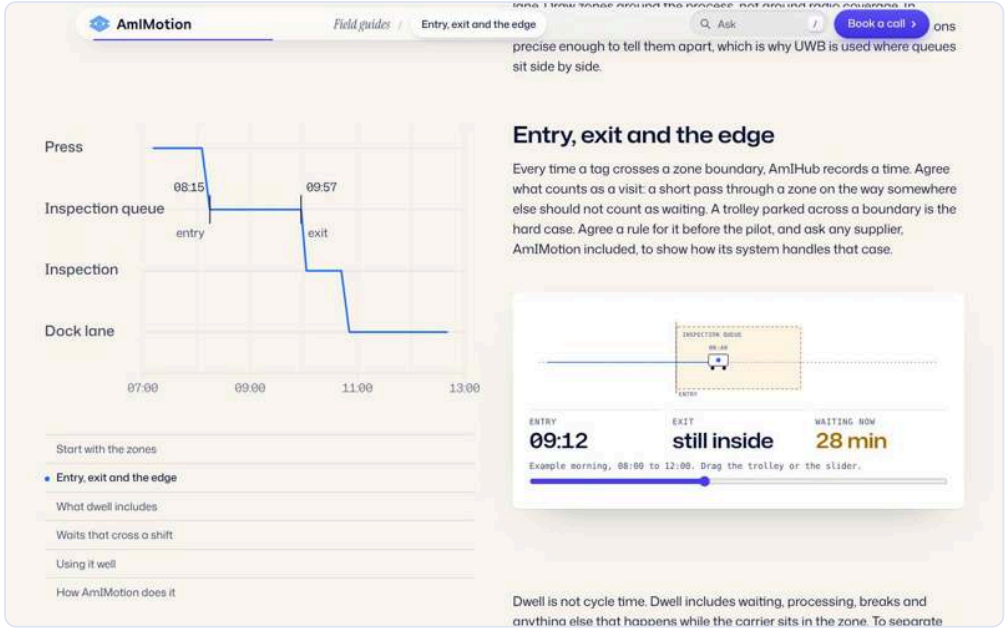

RESOURCES

/learn/dwell-time/

Guide: how dwell time is measured.

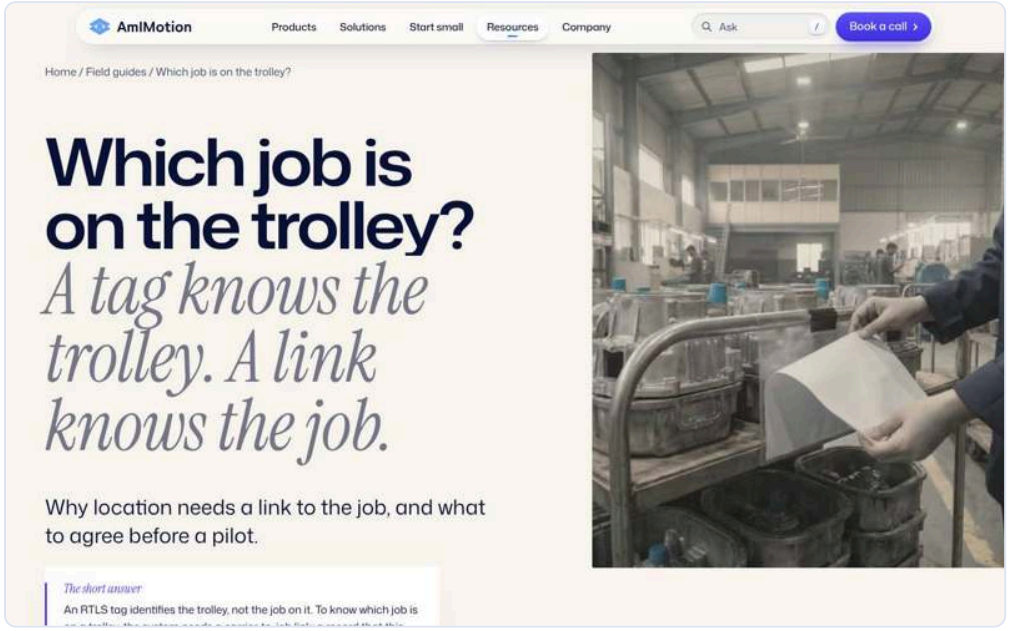

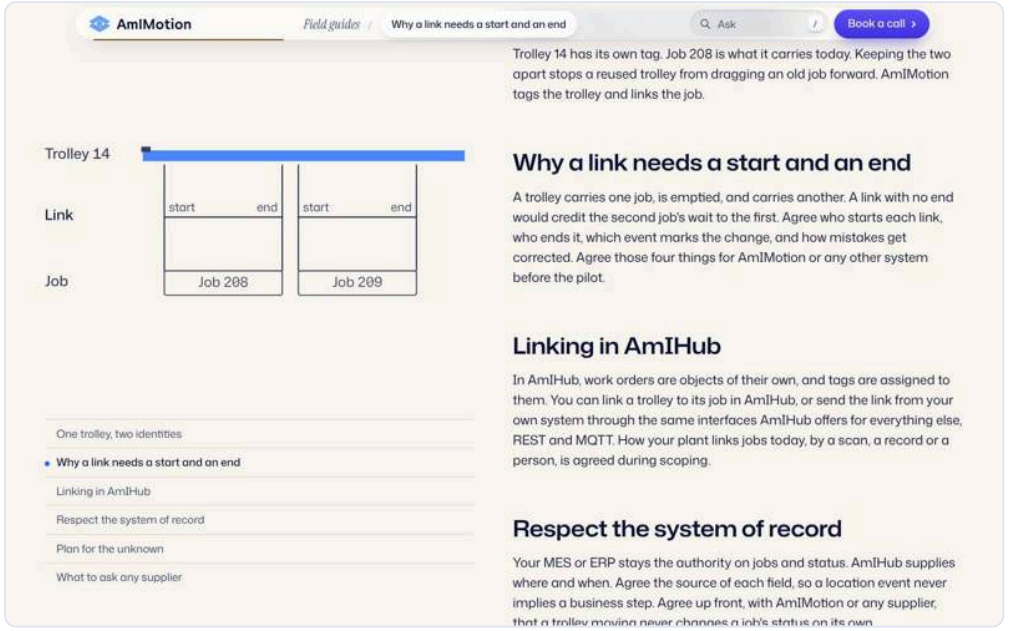

RESOURCES

/learn/association/

Guide: linking a trolley to the job it carries.

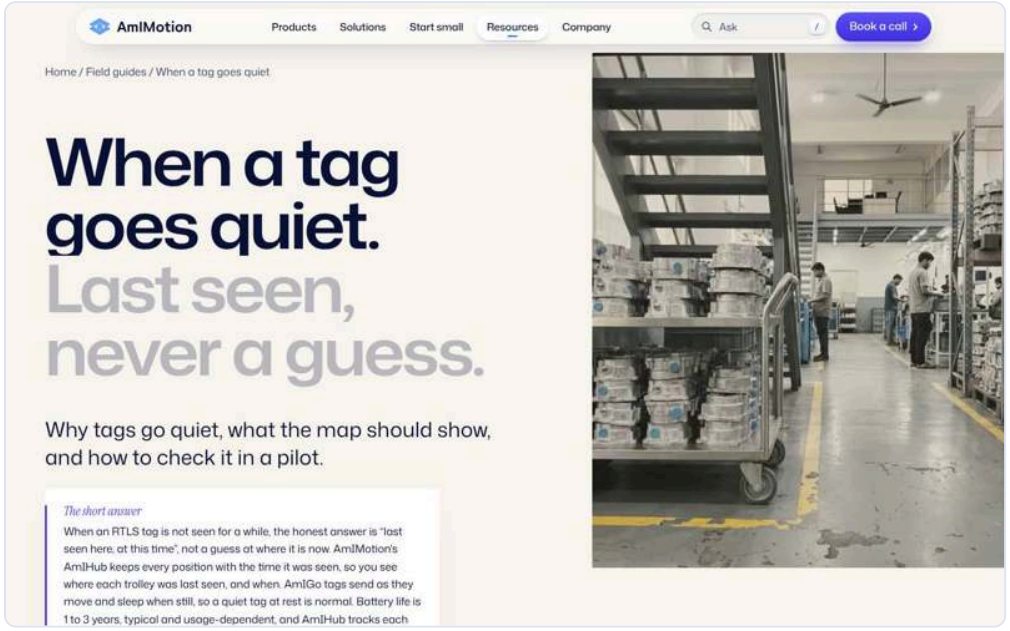

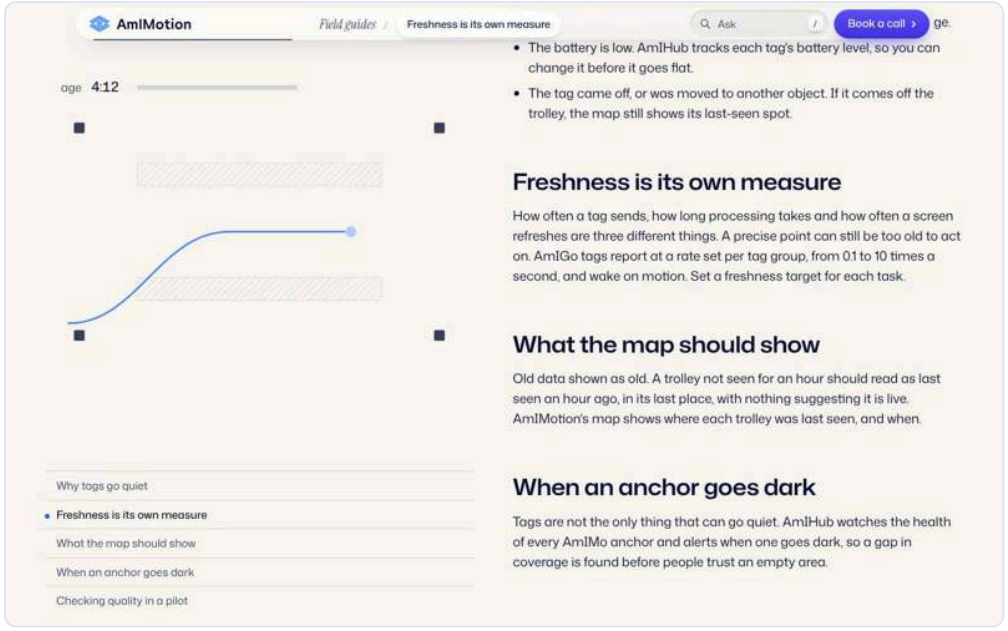

RESOURCES

/learn/location-data-quality/

Guide: what happens when a tag goes quiet.

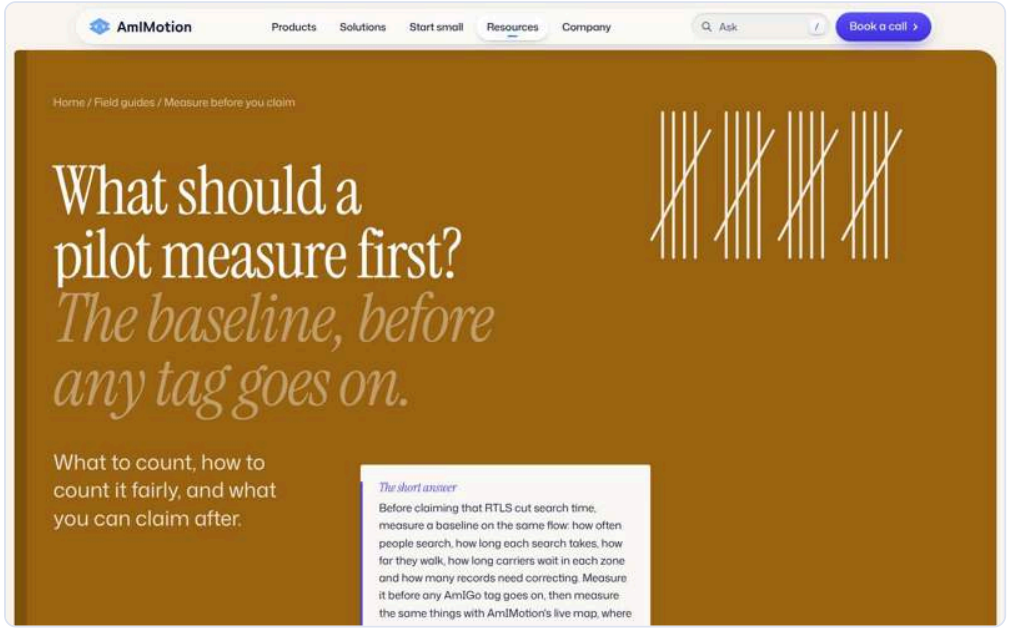

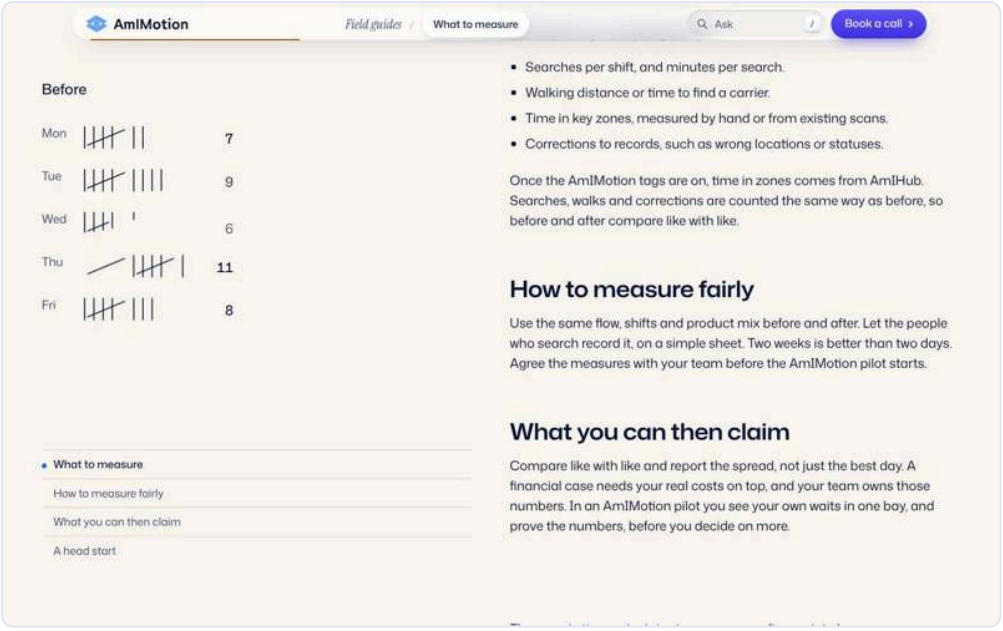

RESOURCES

/learn/pilot-baseline/

Guide: what to measure before claiming results.

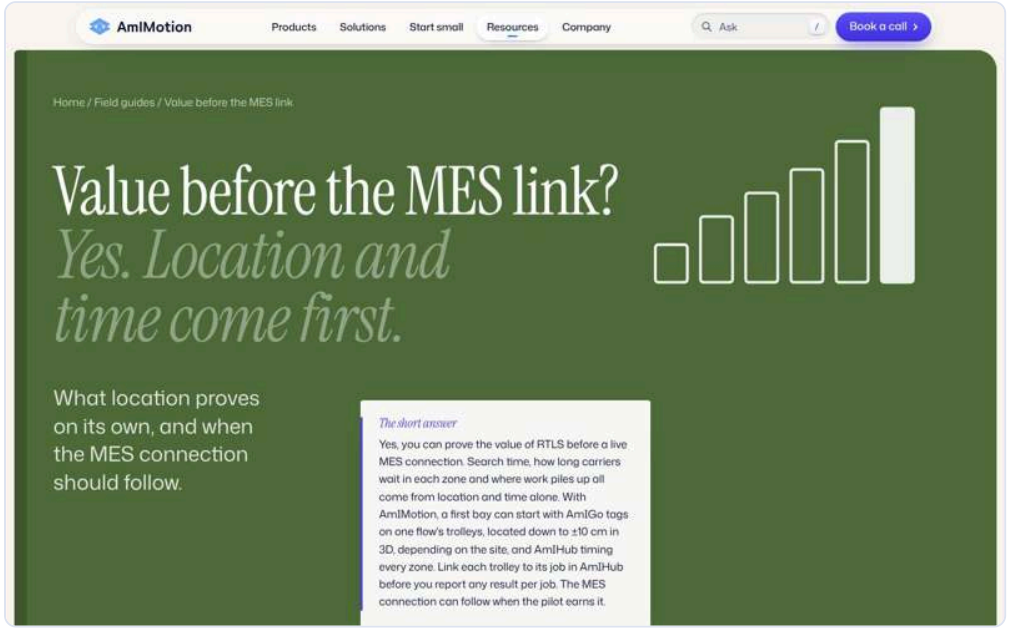

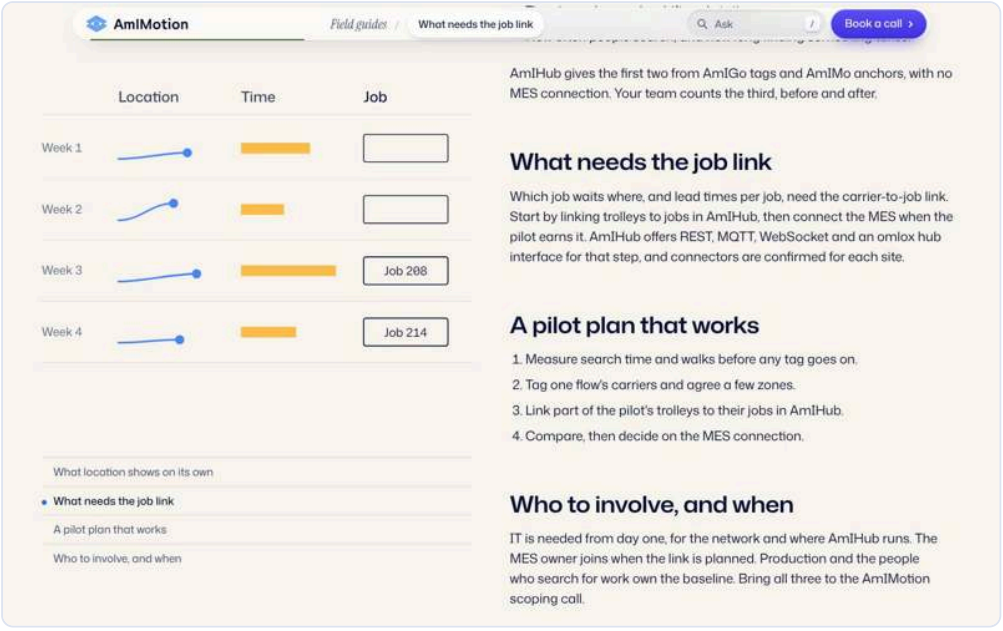

RESOURCES

/learn/value-without-mes/

Guide: proving value without a live MES link.

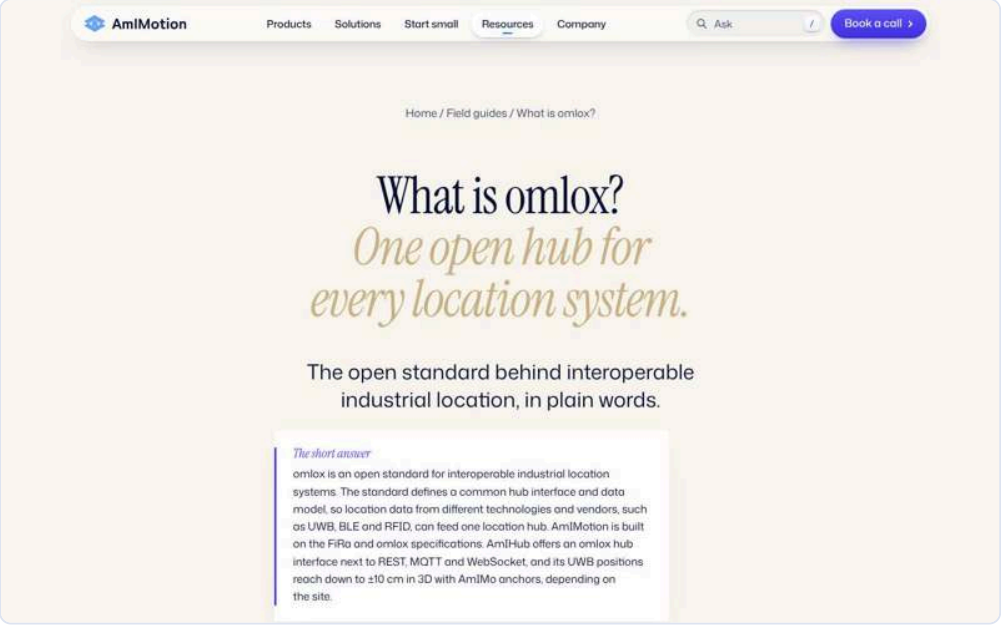

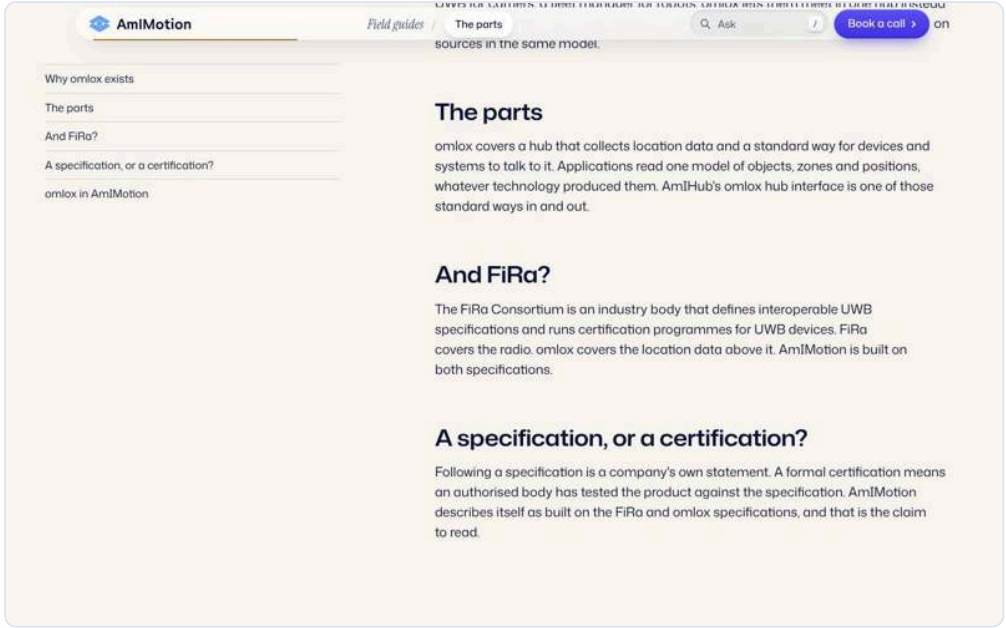

RESOURCES

/learn/omlox/

Guide: omlox, the open RTLS standard.

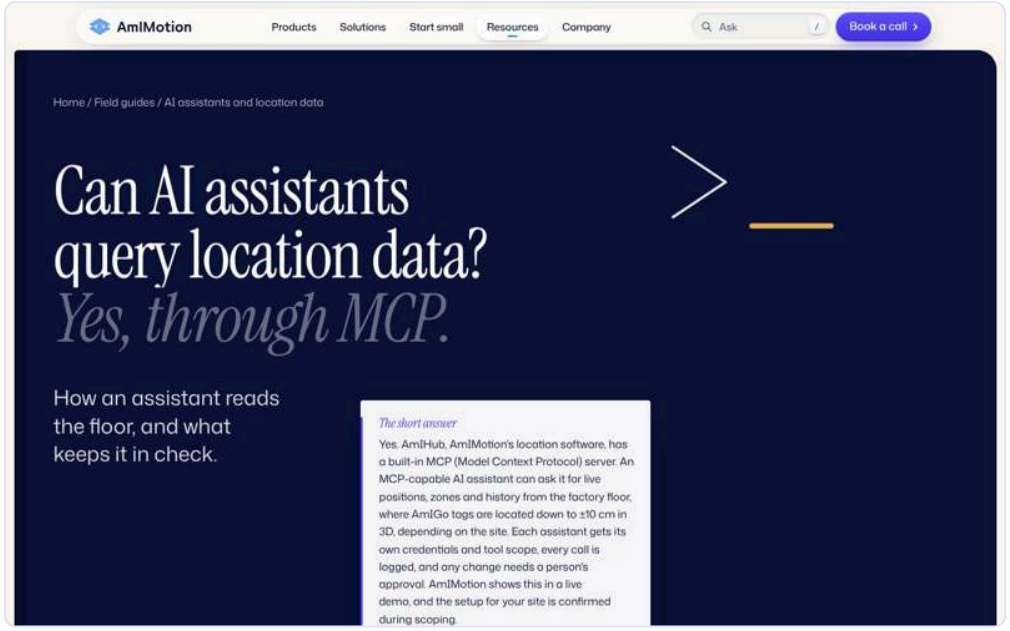

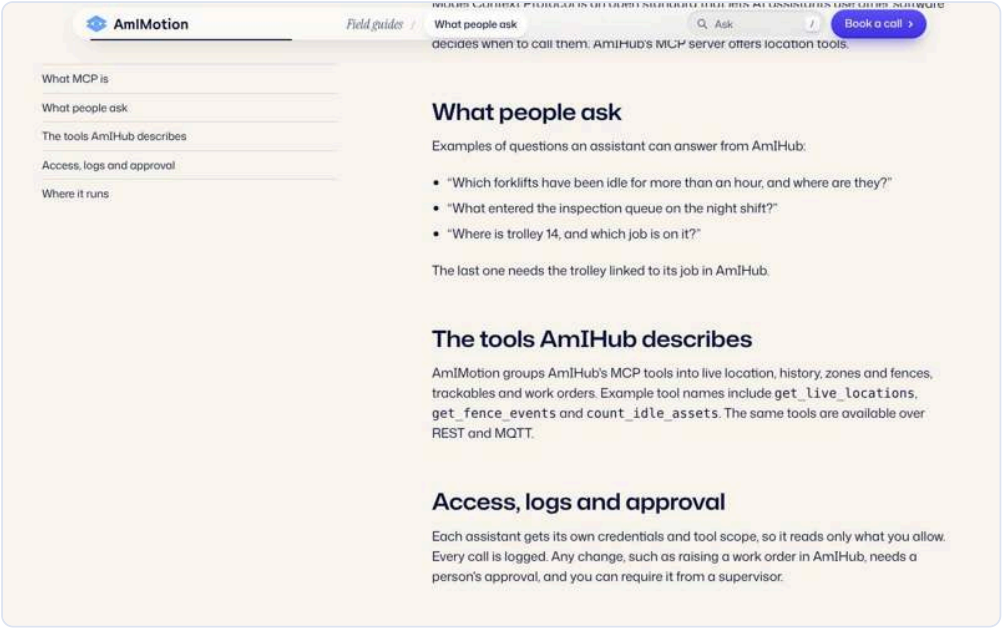

RESOURCES

/learn/mcp-location-data/

Guide: AI assistants querying location data.

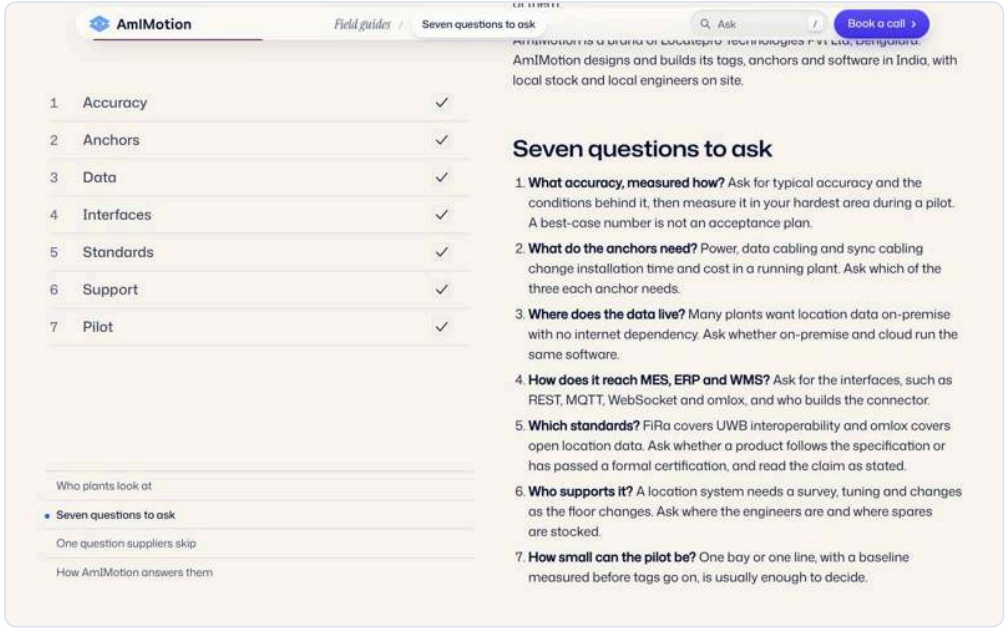

RESOURCES

/learn/uwb-rtls-india/

Guide: choosing a UWB RTLS company in India.

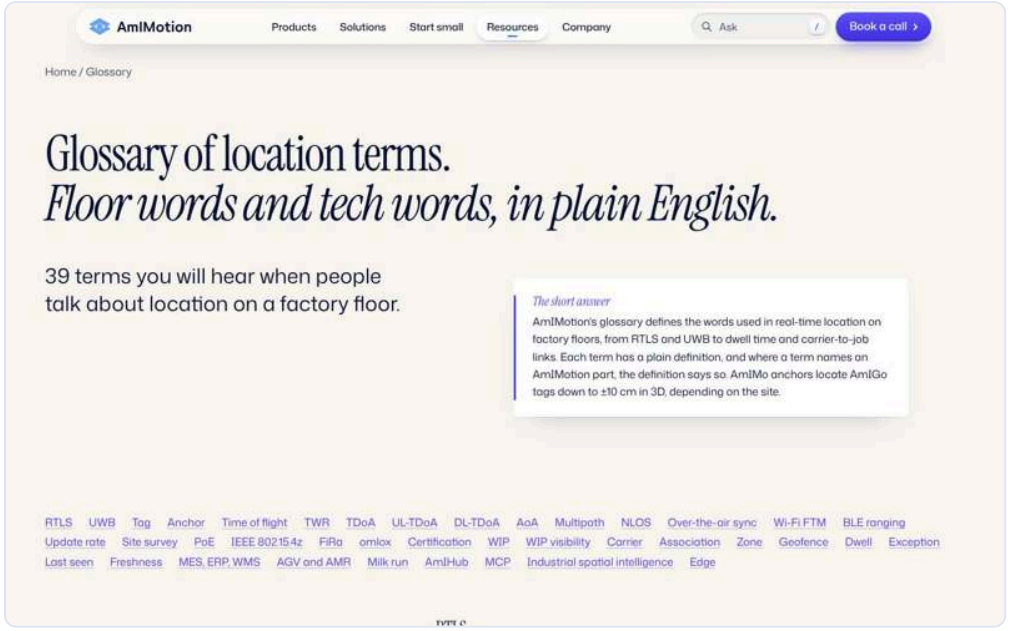

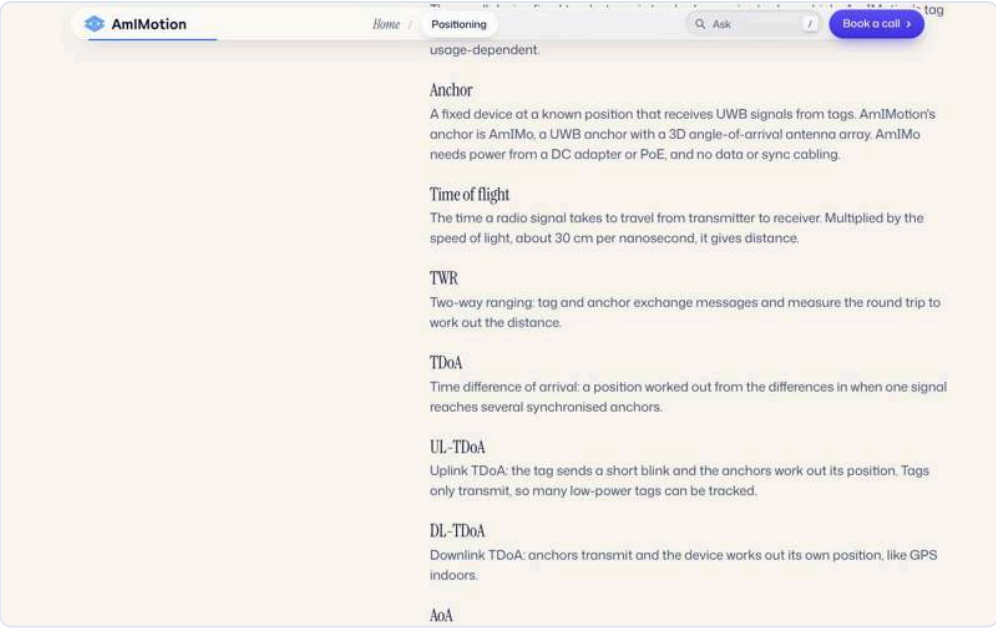

RESOURCES

/glossary/

Glossary of RTLS and UWB terms (answer engines quote these).

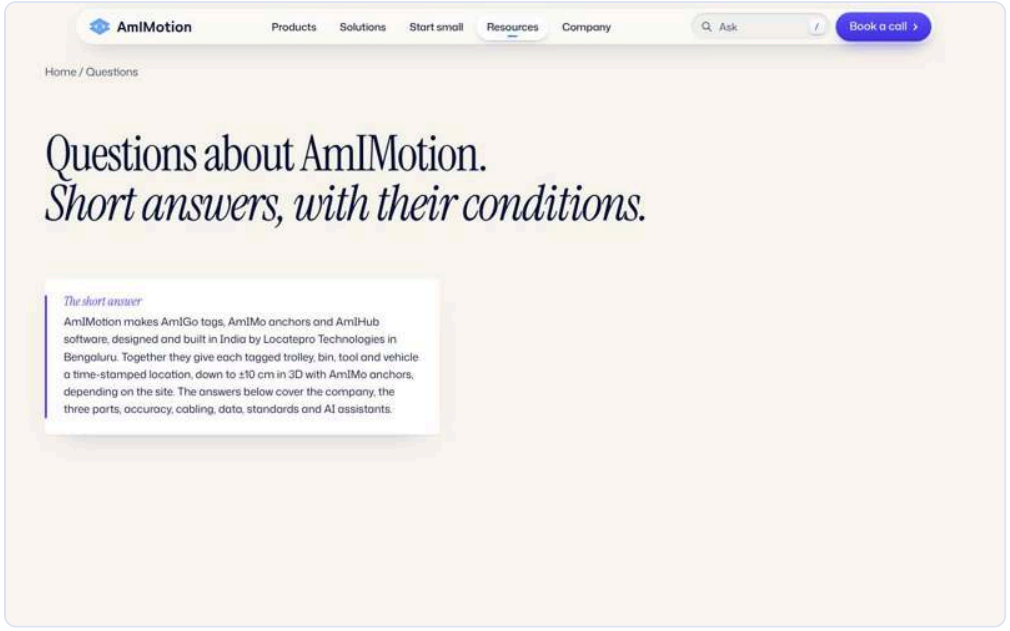

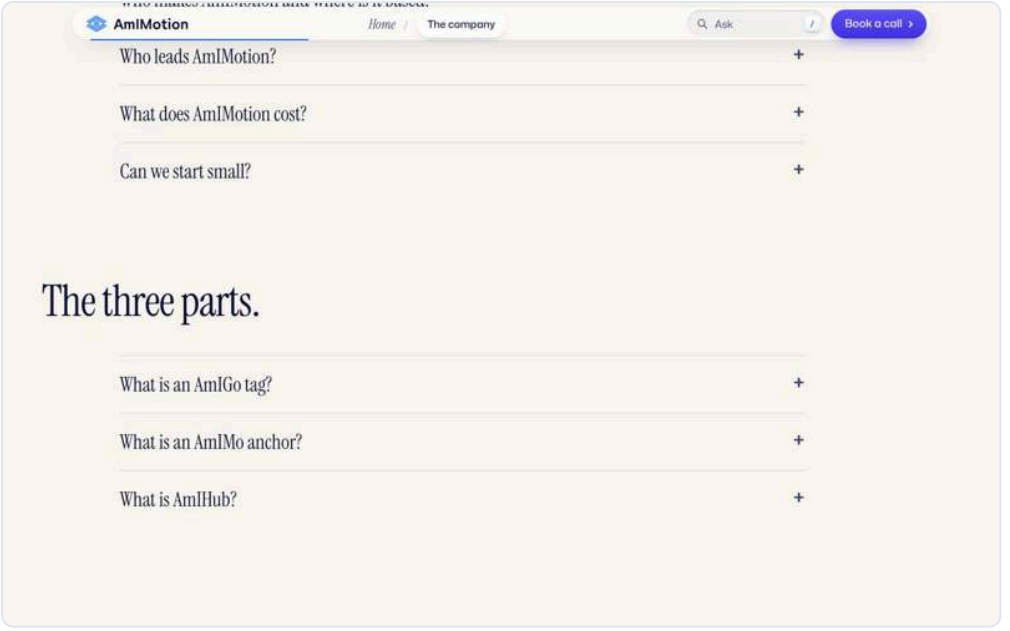

RESOURCES

/faq/

FAQ: short answers to the questions every call starts with.

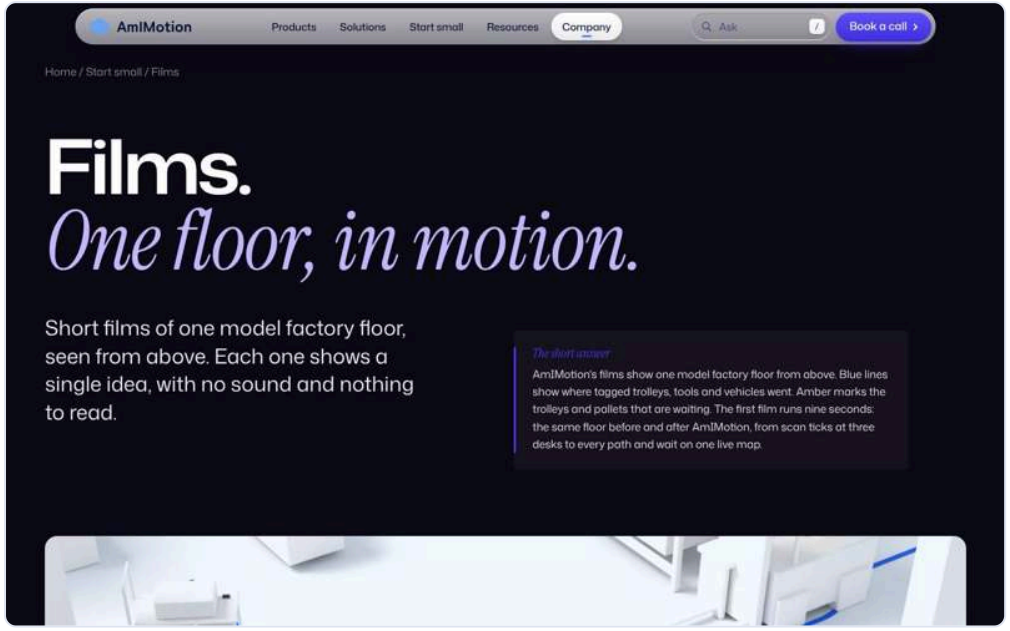

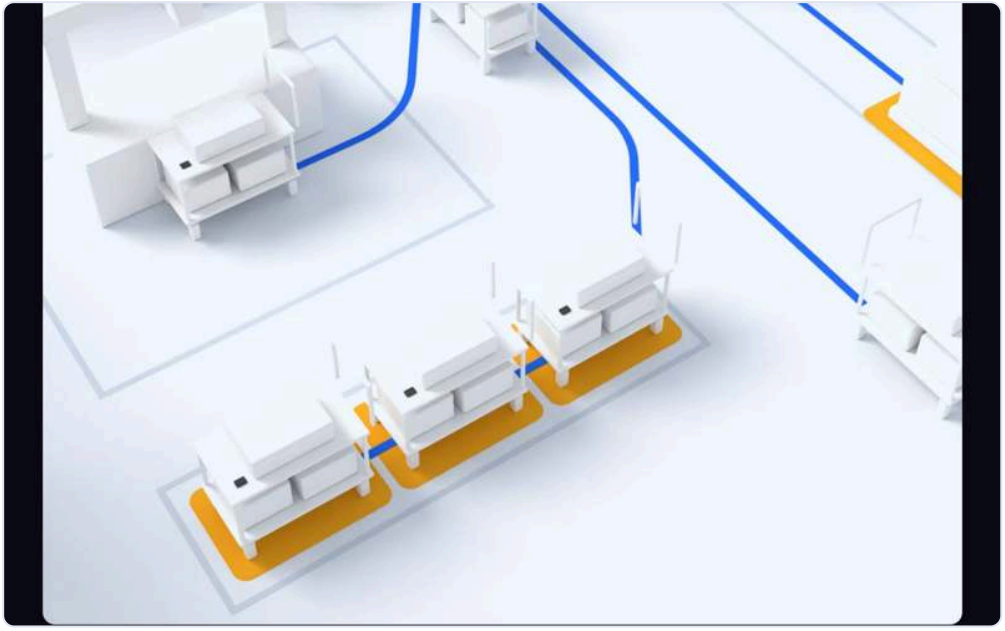

RESOURCES

/films/

Video hub: one floor, in motion.

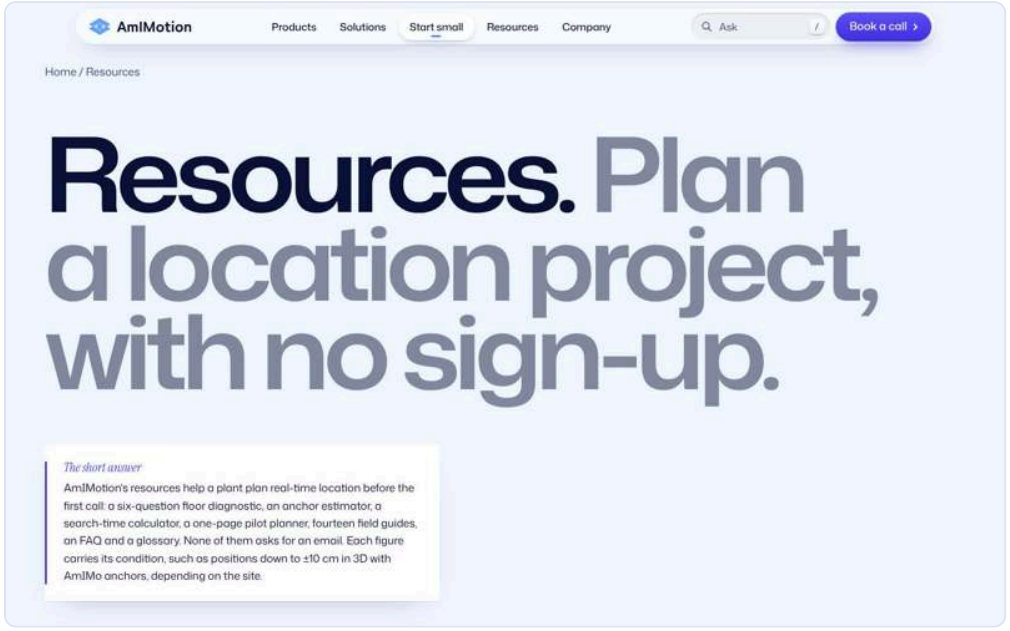

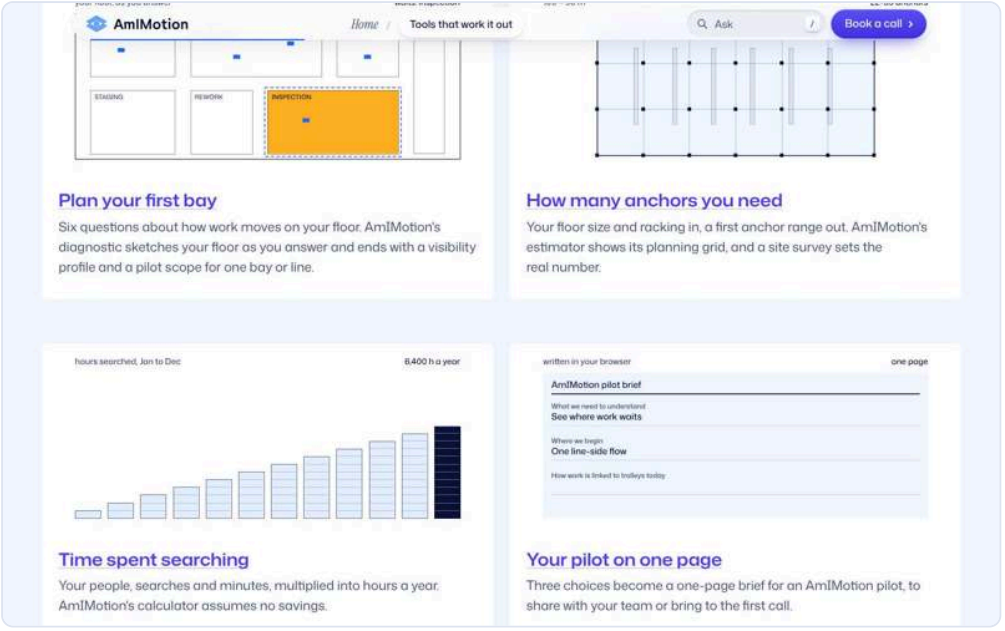

RESOURCES

/resources/

One index of tools, guides and answers.

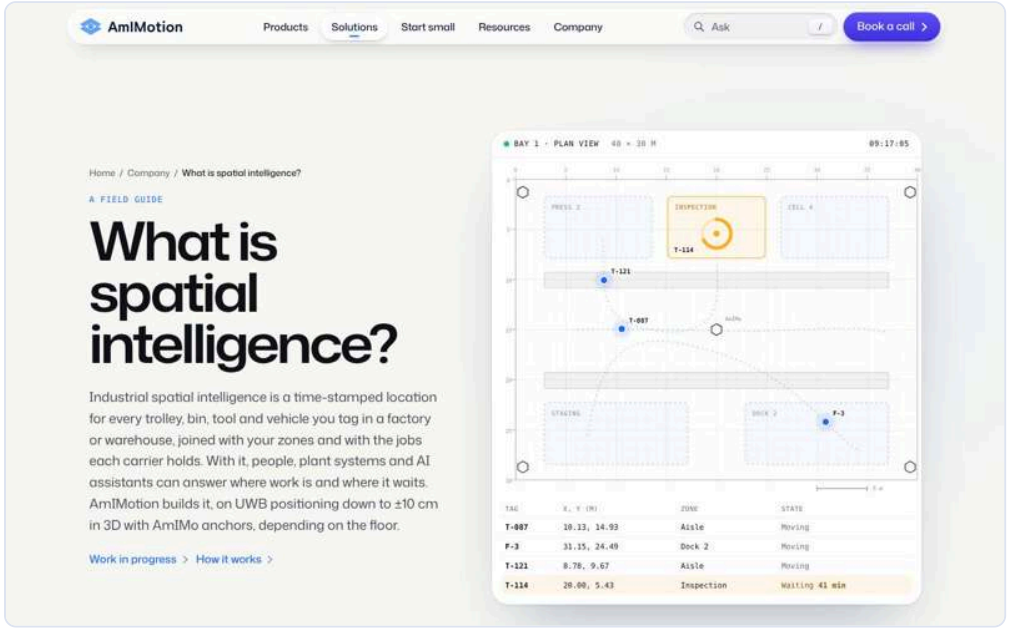

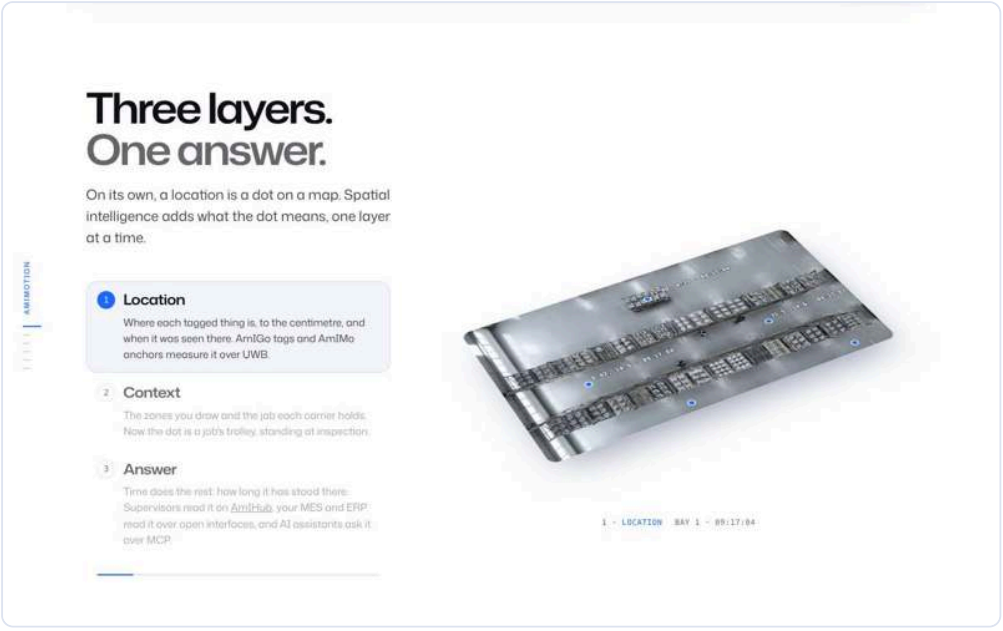

RESOURCES

/industrial-spatial-intelligence/

Defines our category, Industrial Spatial Intelligence, in plain terms.

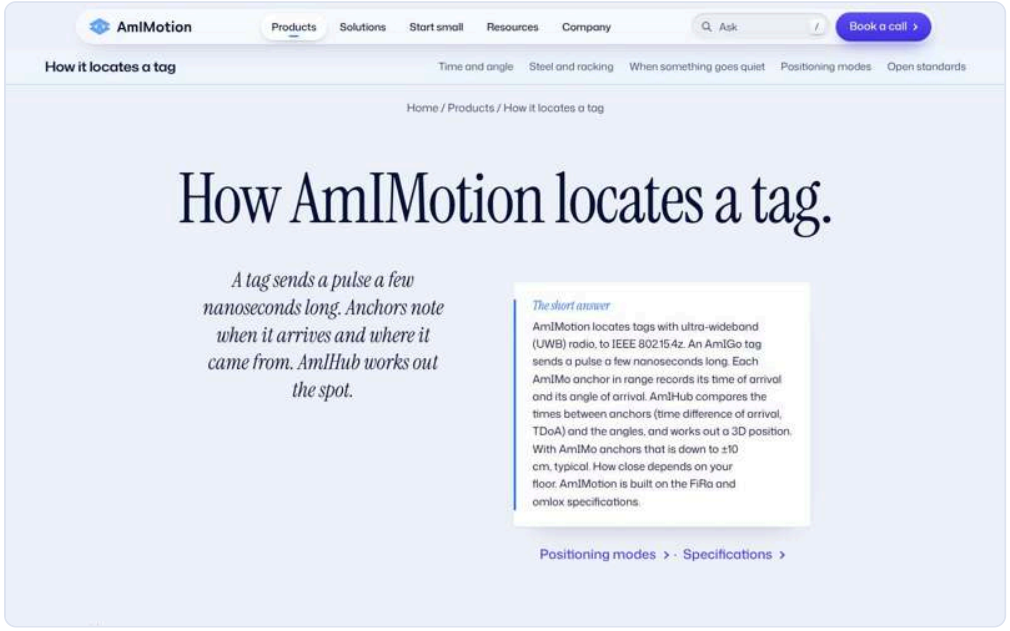

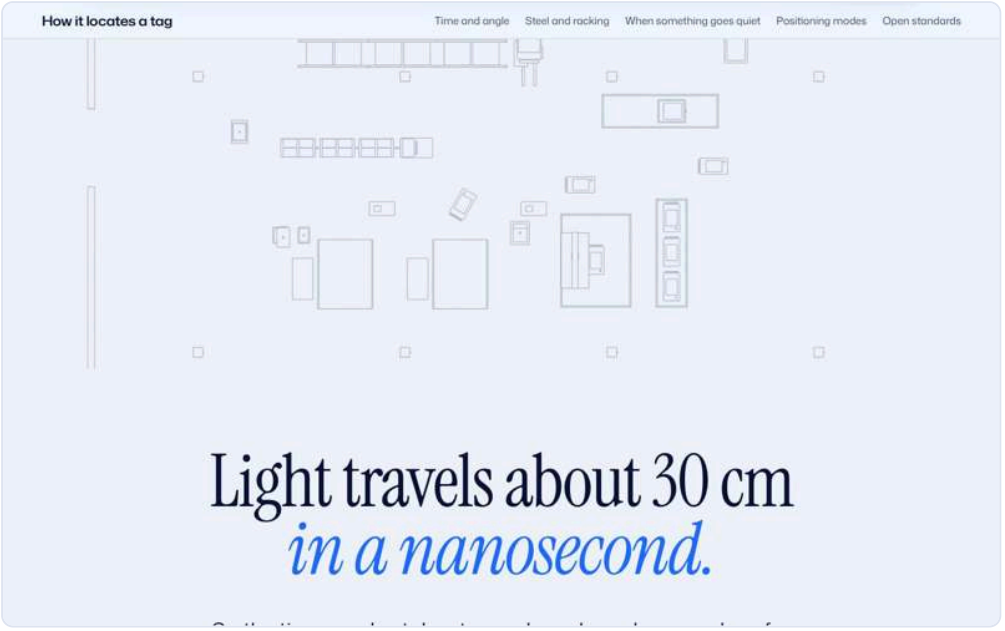

RESOURCES

/technology/

How a tag is located: UWB timing, angle and steel, with a drawing you can drag.

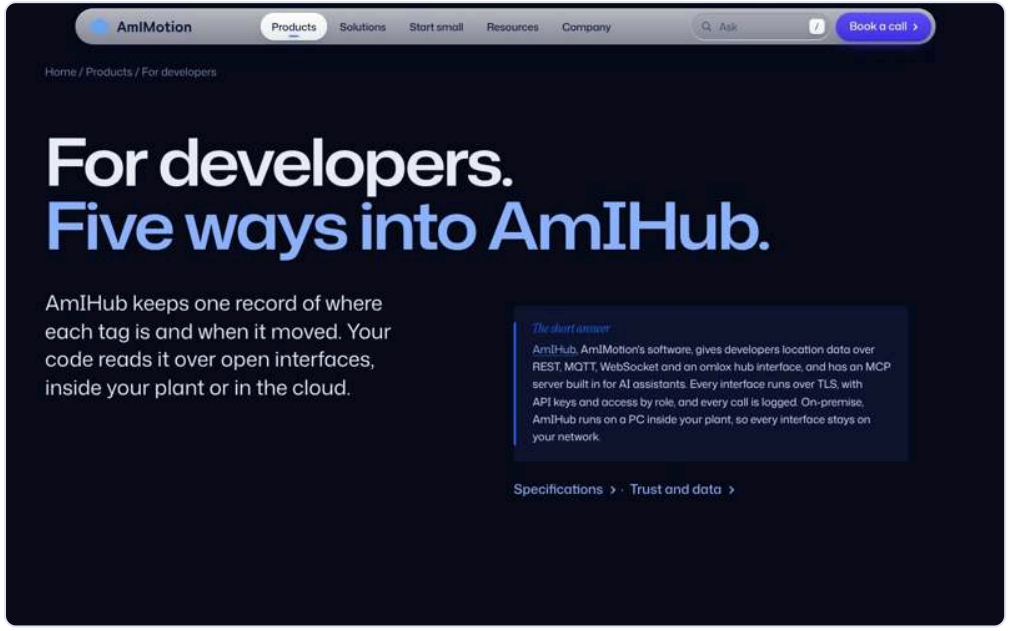

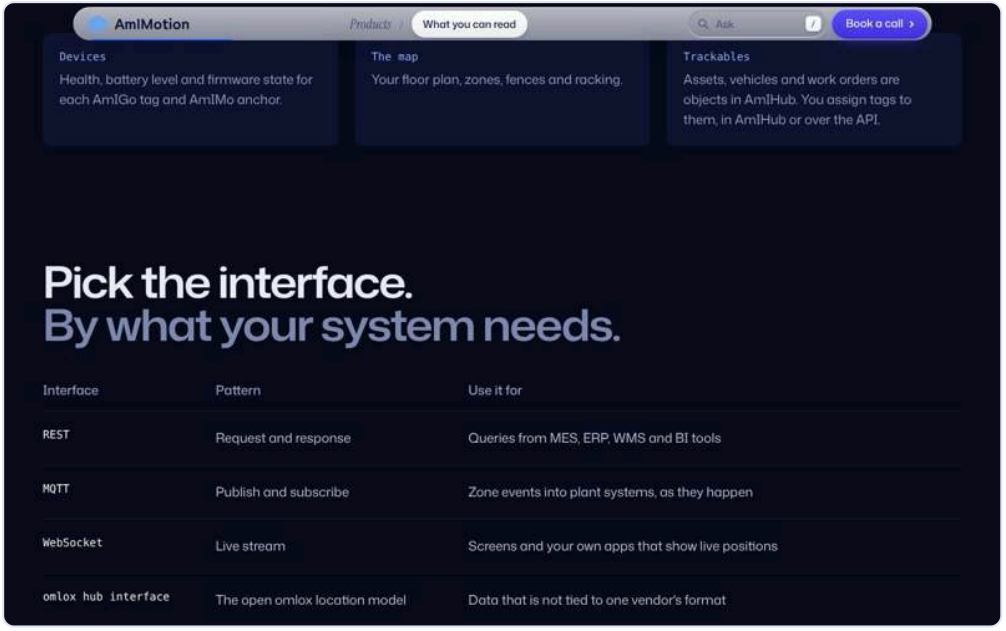

RESOURCES

/developers/

For integrators: REST, MQTT, WebSocket and MCP.

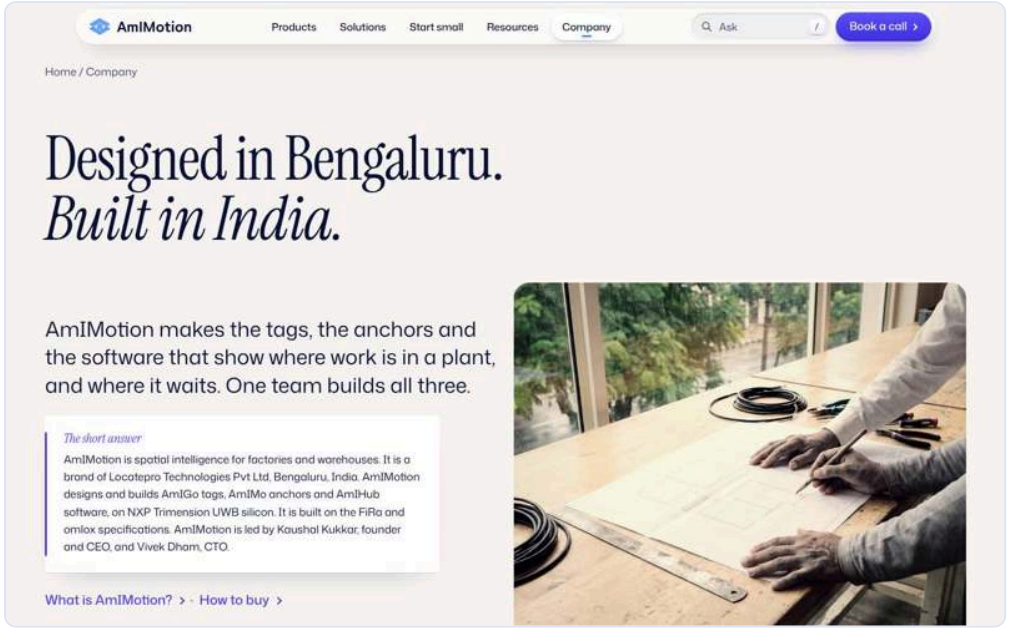

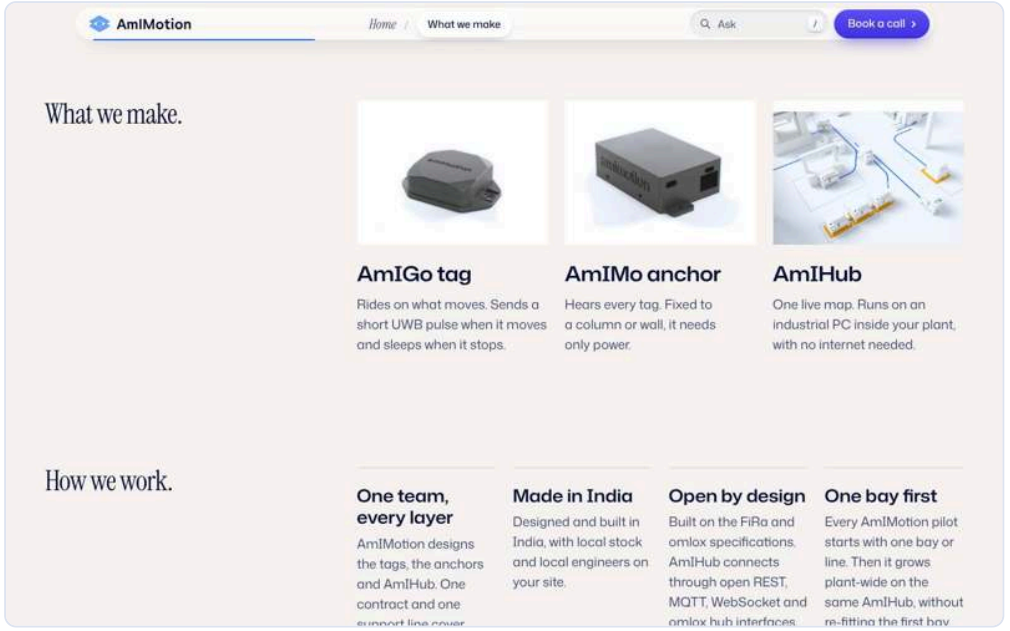

COMPANY

/company/

Who we are: spatial intelligence from Bengaluru.

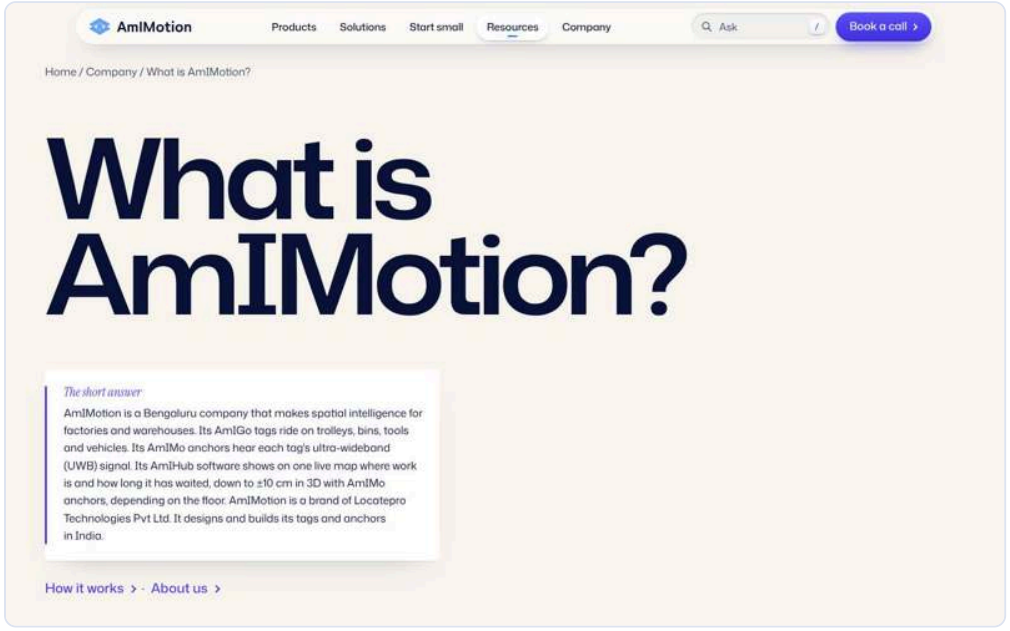

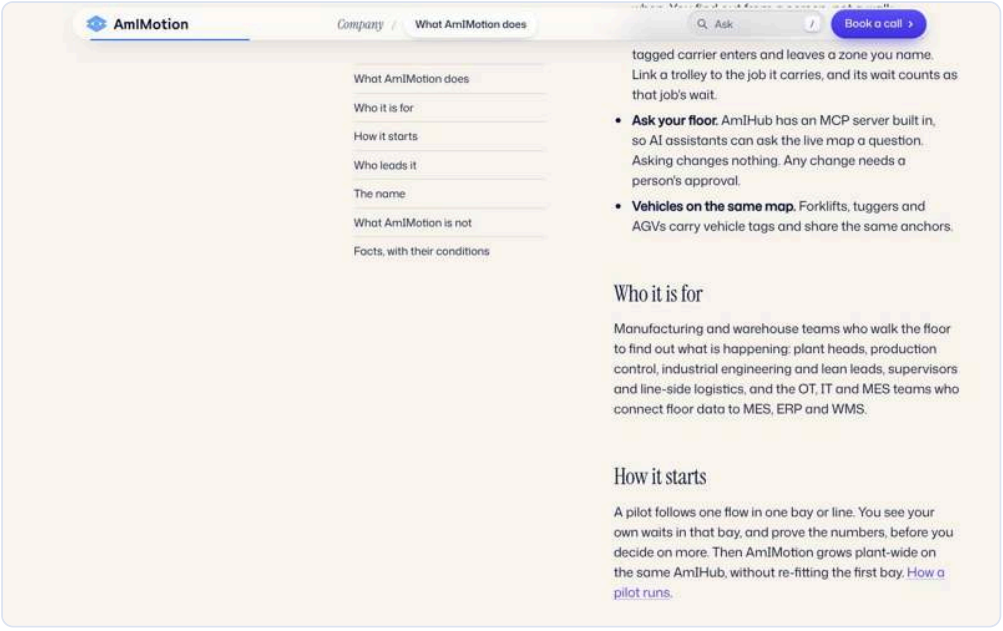

COMPANY

/what-is-amimotion/

A one-page answer to 'what is AmIMotion?' for search and AI assistants.

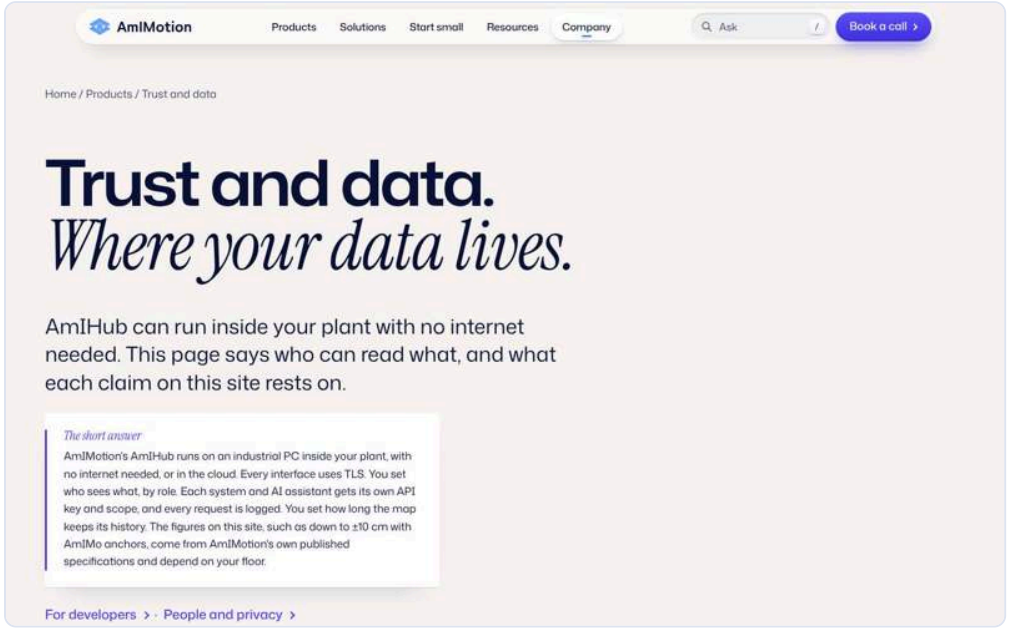

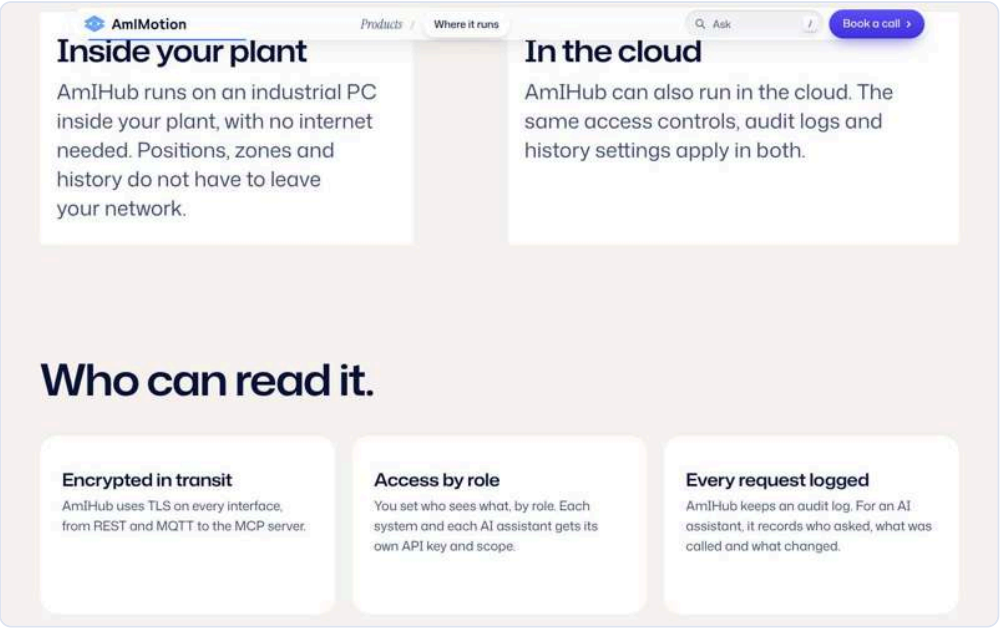

COMPANY

/trust/

Where your data lives: the security answer before it is asked.

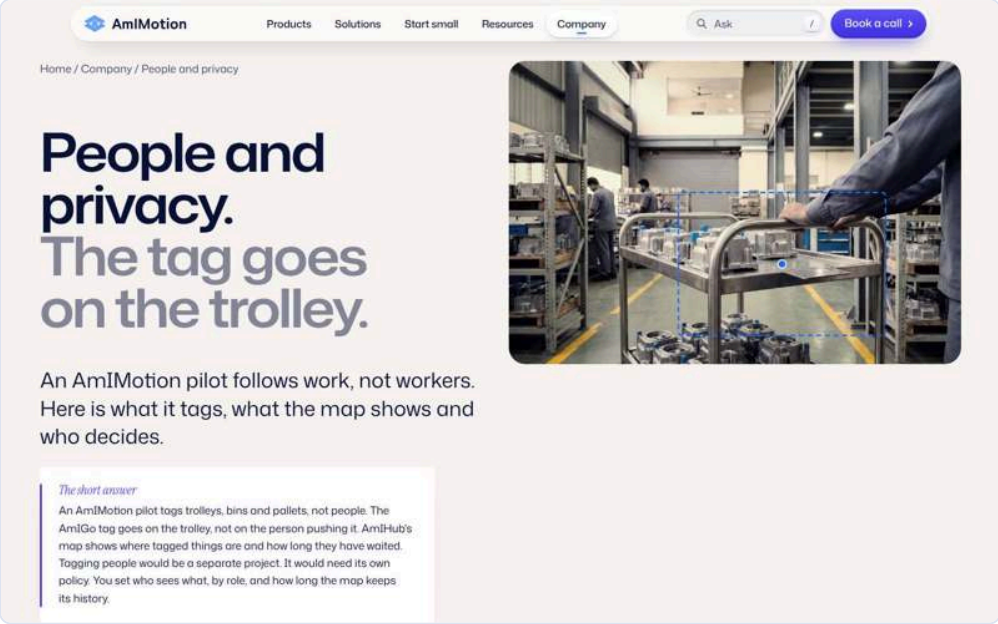

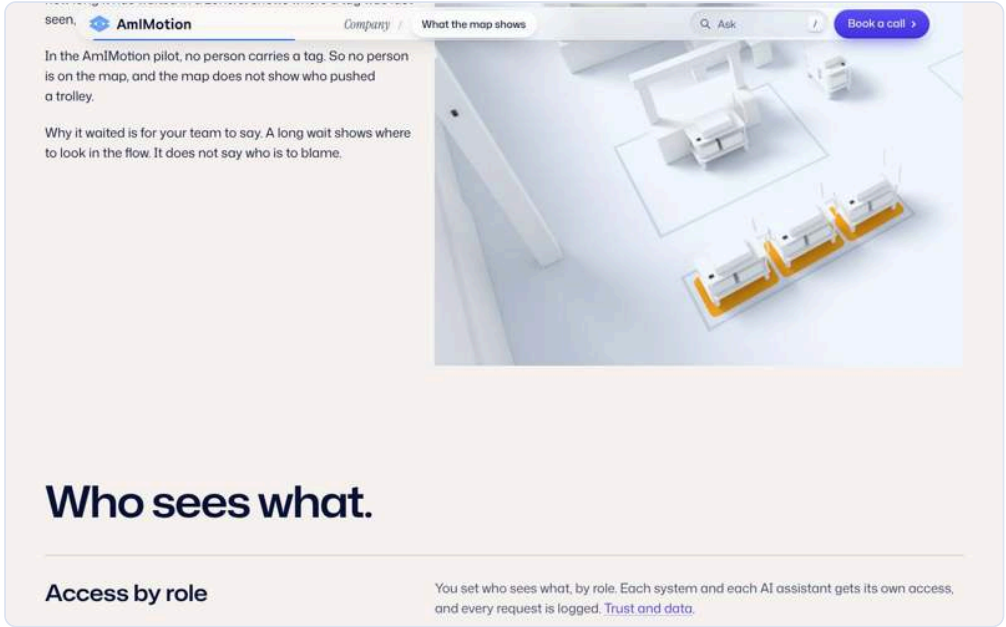

COMPANY

/trust/people/

People and privacy: what a pilot tags, and what it does not.

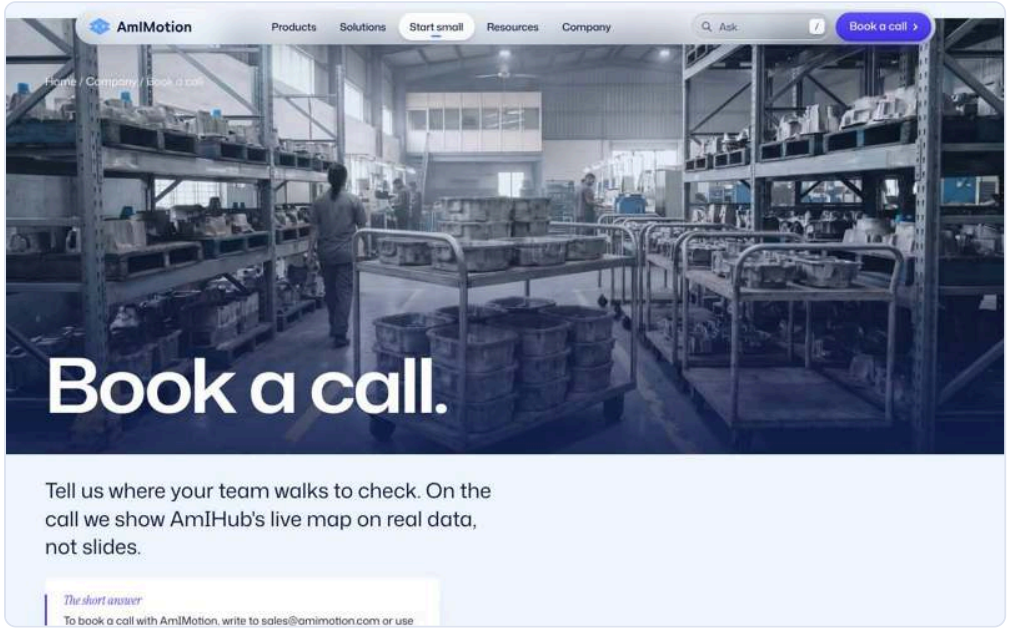

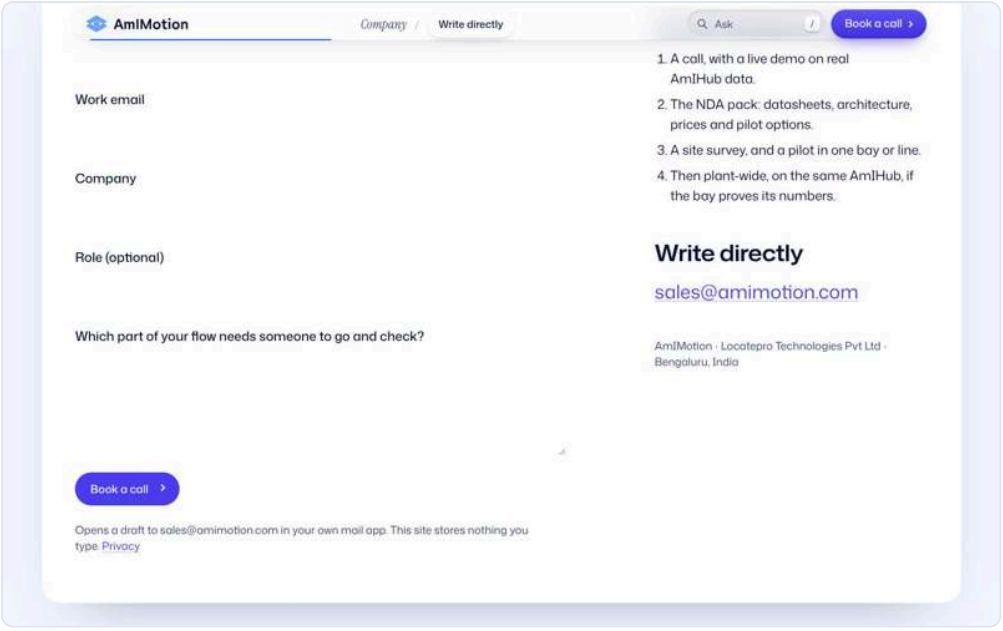

COMPANY

/contact/

Book a call: a live demo on real data. Every page leads here.

COMPANY

/privacy/

Privacy notice.
